Subject:	Re: Chiquita Canyon Landfill - TMP Temperature Submittal
Attachments:	Borehole Profiles Six Week Maximum 11-05-2026.pdf; Daily Maximum Temp Borehole Report 11-5-26.xlsx

In accordance with the LEA's June 6, 2024, Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from September 24, 2026, through November 4, 2026, with a map of the maximum temperatures recorded in the past week and the below narrative on recorded temperature data. We included a separate map demonstrating the locations of the 40 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD.

From October 29, 2026, through November 4, 2026, there were three recorded temperature increases and one recorded temperature decrease that triggered the notification limits set forth in the LEA's October 4, 2024, letter.

Chiquita provides the following updates:

- TP-08
    - The 30-foot thermocouple remained consistent with previously recorded temperatures.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 43°F from 184°F to 141°F from October 18th to October 30th. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-08.

- TP-19
    - A discrepancy was identified during the review of data from prior weeks. Upon investigation, the Site determined that the associated battery had failed and subsequently replaced it. During this inspection, the temperature reading from the 125-foot thermocouple was observed to be anomalously low. Further evaluation indicated that the

125-foot thermocouple required replacement. As an interim measure, the Site installed a 120-foot thermocouple that was available onsite and ordered a replacement 125-foot thermocouple. The replacement 125-foot thermocouple was received on October 20th and subsequently installed on October 28th due to weather conditions. The newly installed 125-foot thermocouple will be monitored over the coming weeks to confirm that it is functioning as designed and providing consistent temperature readings.

- TP-24
  - The 100-foot thermocouple remained consistent with previously recorded temperatures.
  - The 155-foot thermocouple remained consistent with previously recorded temperatures.
  - The 210-foot thermocouple remained consistent with previously recorded temperatures.

- TP-25
  - The 110-foot thermocouple showed an increase in maximum temperature of 43°F from 211°F to 254° from October 12th to October 29th. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-25.

- TP-28
  - The 95-foot thermocouple reported a temperature of 0°F on November 3rd following damage from field activities. The thermocouple was replaced and will be monitored over the coming weeks to confirm that it is functioning as designed and providing consistent temperature readings.

- TP-31
  - All thermocouples reported temperatures of 0°F from October 6th to October 14th. Upon investigation, the Site determined the cause was likely a failure of the associated battery, which was replaced on October 7th. Further review of the data showed that all temperature readings decreased simultaneously, suggesting the issue may be related to the wiring connected to the remote I/O card or a malfunctioning I/O card rather than actual temperature changes. On October 16th, the I/O card was replaced, along with a new antenna. Further investigation determined that the terminal box also required replacement. A replacement terminal box was installed; however, the issue persisted. As a result, a replacement instrument box has been ordered and is anticipated to be installed upon receipt in November 2026.

- TP-33
  - The 15-foot thermocouple showed an increase in maximum temperature of 55°F from 109°F to 164° from October 22nd to October 31st. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-33.
  - The 30-foot thermocouple showed an increase in maximum temperature of 53°F from 118°F to 171° from October 22nd to October 29th. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-33.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024, letter.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no other sensors showed an anomaly, outlier, data gap, or malfunction, as discussed above. In the past week there were no other recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than 20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024, and October 4, 2024, adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024, response that was used as a basis for the LEA's October 4, 2024, letter.

We will continue to update the LEA on the TMP readings.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 9/24/2026 12:00 AM to 11/4/2026 12:00 AM

SCS ENGINEERS

07224053.00 | November 5, 2026

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From October 29, 2026, through November 4, 2026, there were three recorded temperature increases and one recorded temperature decrease that triggered the notification limits set forth in the LEA's October 4, 2024, letter.

Chiquita provides the following updates:

- TP-08
    - The 30-foot thermocouple remained consistent with previously recorded temperatures.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 43°F from 184°F to 141°F from October 18th to October 30th. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-08.

- TP-19
    - A discrepancy was identified during the review of data from prior weeks. Upon investigation, the Site determined that the associated battery had failed and subsequently replaced it. During this inspection, the temperature reading from the 125-foot thermocouple was observed to be anomalously low. Further evaluation indicated that the 125-foot thermocouple required replacement. As an interim measure, the Site installed a 120-foot thermocouple that was available onsite and ordered a replacement 125-foot thermocouple. The replacement 125-foot thermocouple was received on October 20th and subsequently installed on October 28th due to weather conditions. The newly installed 125-foot thermocouple will be monitored over the coming weeks to confirm that it is functioning as designed and providing consistent temperature readings.

- TP-24
    - The 100-foot thermocouple remained consistent with previously recorded temperatures.
    - The 155-foot thermocouple remained consistent with previously recorded temperatures.
    - The 210-foot thermocouple remained consistent with previously recorded temperatures.

- TP-25
    - The 110-foot thermocouple showed an increase in maximum temperature of 43°F from 211°F to 254° from October 12th to October 29th. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-25.

- TP-28
    - The 95-foot thermocouple reported a temperature of 0°F on November 3rd following damage from field activities. The thermocouple was replaced and will be monitored over the coming weeks to confirm that it is functioning as designed and providing consistent temperature readings.

- TP-31
    - All thermocouples reported temperatures of 0°F from October 6th to October 14th. Upon investigation, the Site determined the cause was likely a failure of the associated battery, which was replaced on October 7th. Further review of the data showed that all temperature readings decreased simultaneously, suggesting the issue may be related to the wiring connected to the remote I/O card or a malfunctioning I/O card rather than actual temperature changes. On October 16th, the I/O card was replaced, along with a new antenna. Further investigation determined that the terminal box also required replacement. A replacement terminal box was installed; however, the issue persisted. As a result, a replacement instrument box has been ordered and is anticipated to be installed upon receipt in November 2026.

- TP-33
    - The 15-foot thermocouple showed an increase in maximum temperature of 55°F from 109°F to 164° from October 22nd to October 31st. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-33.
    - The 30-foot thermocouple showed an increase in maximum temperature of 53°F from 118°F to 171° from October 22nd to October 29th. One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-33.

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-1

TP-08
One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-08.

TP-19
A discrepancy was identified during the review of data from prior weeks. Upon investigation, the Site determined that the associated battery had failed and subsequently replaced it. During this inspection, the temperature reading from the 125-foot thermocouple was observed to be anomalously low. Further evaluation indicated that the 125-foot thermocouple required replacement. As an interim measure, the Site installed a 120-foot thermocouple that was available onsite and ordered a replacement 125-foot thermocouple. The replacement 125-foot thermocouple was received on October 20th and subsequently installed on October 28th due to weather conditions. The newly installed 125-foot thermocouple will be monitored over the coming weeks to confirm that it is functioning as designed and providing consistent temperature readings.

TP-25
One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-25.

TP-28
The 95-foot thermocouple reported a temperature of 0°F on November 3rd following damage from field activities. The thermocouple was replaced and will be monitored over the coming weeks to confirm that it is functioning as designed and providing consistent temperature readings.

TP-31
All thermocouples reported temperatures of 0°F from October 6th to October 14th. Upon investigation, the Site determined the cause was likely a failure of the associated battery, which was replaced on October 7th. Further review of the data showed that all temperature readings decreased simultaneously, suggesting the issue may be related to the wiring connected to the remote I/O card or a malfunctioning I/O card rather than actual temperature changes. On October 16th, the I/O card was replaced, along with a new antenna. Further investigation determined that the terminal box also required replacement. A replacement terminal box was installed; however, the issue persisted. As a result, a replacement instrument box has been ordered and is anticipated to be installed upon receipt in November 2026.

TP-33
One potential factor contributing to the observed temperature changes is the removal of liquids from wells near TP-33.
