

## 3F Disinfection April 22, 2020

Consistent with CDC instructions for Cleaning and Disinfecting Your Facility, **diluted bleach solutions** can be used on 3F Screens, Hanging Panels and Wall Tiles against COVID-19.

To retain the material and performance properties of 3F and stay within the AMQ warranty terms, please follow the below application instructions.

### **Solution Ratio**

Disinfect using a ratio of 5 tablespoons (1/3rd cup) bleach per gallon of water OR 4 teaspoons bleach per quart of water. This solution ratio is consistent with CDC instruction for virus and bacteria control.

### **Application**

Do not soak or rub the diluted bleach solution into the 3F material. Instead, spray apply the diluted bleach solution as a mist and let sit for at least 1 minute before wiping off any cleaning solution residue with a damp cloth.

For guaranteed safety, patch test diluted bleach solution in an inconspicuous place on the product before applying widely.
