

DRUNKARD'S DREAM

HATIORA SALICORNIODES

A bushy cactus with long, segmented stalks that can grow up to two feet tall, and produce beautiful yellow flowers at the top

Prefers to be kept evenly moist but not soggy. Water them when the top inch of soil is dry. Avoid letting them sit in standing water as this can lead to root rot

Best thrives in bright, indirect light

Can be propagated through stem cuttings, or by twisting a "bottle cap" off from a stem

Typically not toxic
