

TOPSY TURVY

ECHEVERIA RUNYONII

A silvery-green succulent with rosettes that can grow up to 10 inches in diameter, and orange blooms that emerge on tall stems in late summer and fall

Only water when soil is 100% dry, while also not allowing the plant to sit in water (which can attract mealybug)

Prefers indirect sunlight

Can be propagated by leaf cuttings, on soil or by water propagation

Typically not toxic to pets
