

## Information On Your Terms

Universal Platform™ is the most comprehensive information management platform available in a single product. Providing an enterprise class systems integration platform; using your Master Data Models to breathe life into your systems integrations. The living Master Data Model governs all aspects of the Extract Transform and Loading process, underpinning your data governance and data automation.

Universal Platform™ is the only integration Platform as a Service (iPaaS) which provides both cloud and on-premise solutions through the same product. It is YOUR choice on how you want to deploy with zero compromise on features and capability, with the same financial investment.

## Capabilities

### Simplify company acquisition

Shorten your ROI period through consolidated reporting, de-risked process integration and fast-tracked change management.

### Successful system migration

Integrate seamlessly with any bespoke system or open standard. Then freely flow your data from old to new.

### Access legacy data

Access your data from legacy systems as easily as your new systems.

### Exceed compliance requirements

Audit, log and trace all your information flows. Quickly retrieve data as and when you need it.

### Create efficient business process

Automate your manual business processes. Reduce double handling of data.

### Improve decision making

Base decisions on information you can trust, when and how you want it.

### Gain control of your cloud

Realise cloud benefits with easy migration, security and management.

### Perform information initiatives

Perform real-world cause and effect scenarios in a safe environment.

### Empower employees

Provide employees with the ability to make decisions. Identify and remove the information roadblocks that inhibit collaboration.

## iPaaS Features

### EcoSystem

- SDK Extensible
- Enterprise Service Bus
- Master Data Modelling
- Extract Transform Load
- Service Orientated Architecture
- Open Standards

### Security and Governance

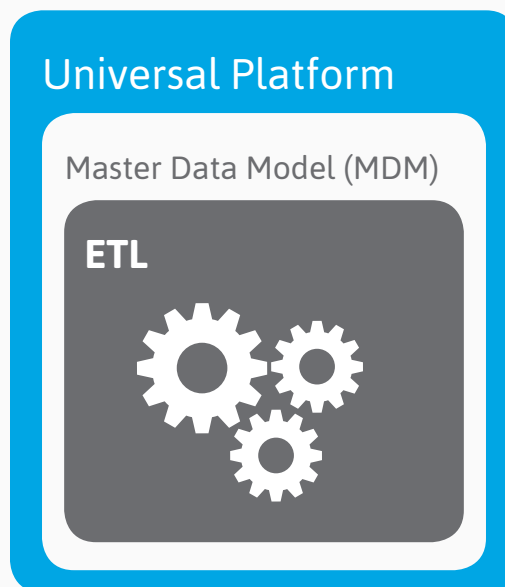

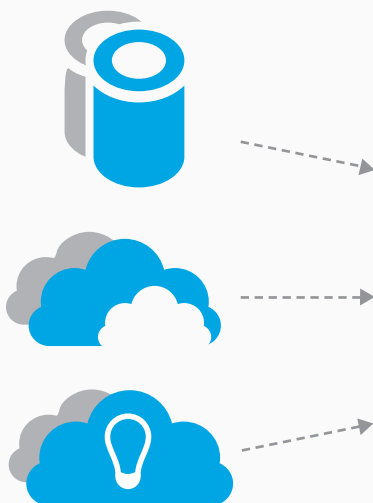

- Secure by Default
- IDM Integration
- Business Architecture Support
- Secure Transport Standards
- Secure Storage Standards
- Data Tracking incl. SCD2

### Core iPaaS Services

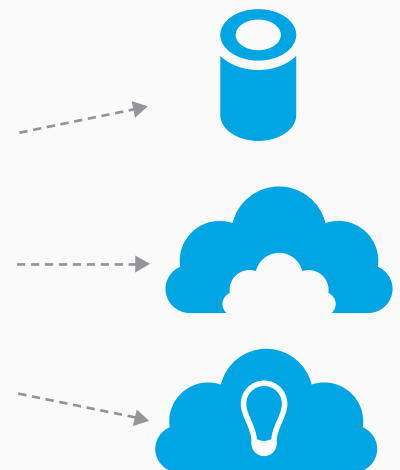

- Multi Tenancy
- Scalable
- Load Distribution
- Autonomous Stack
- Unified Architecture
- Solution Distribution

## Universal Platform Workflow

### Unorganised

### Organised
