**Subject: January 2025 Monthly Report Pursuant to Milestones 1A-3 and 5 of the LEA
June 6, 2024 Compliance Order and July 30, 2024 Letter, Chiquita Canyon
Landfill, Castaic, California**

Dear Ms. Gork:

SCS Engineers (SCS), on behalf of Chiquita Canyon, LLC (Chiquita), hereby provides the Los Angeles County Department of Public Health, Solid Waste Management Program, acting as the Local Enforcement Agency (LEA) with a monthly report pursuant to Milestones 1A-3 and 5 of the LEA Compliance Order dated June 6, 2024 (Compliance Order) and subsequent related correspondence received from the LEA. This report covers the monthly period for January 2025.

Chiquita Canyon Landfill (CCL or Landfill) is a landfill/solid waste disposal facility located at 29201 Henry Mayo Drive in Castaic, California. In connection with the Landfill, Chiquita operates a landfill gas collection and control system. SCS prepared and submitted the Carbon Monoxide and Hydrogen Reading Summary Report (Summary Report) to the LEA on June 6, 2024, on behalf of Chiquita, in response to the directives in the LEA letters dated April 5, 2024 and May 28, 2024 regarding collection of landfill gas data and in accordance with Milestone 1A-2 of the Compliance Order. The LEA, in collaboration with the California Department of Resources, Recycling, and Recovery (CalRecycle), reviewed the Summary Report and determined that it complied with Milestone 1A-2. The LEA set forth several new requirements for Chiquita to comply with Milestone 1A-3 in follow-up correspondence dated July 30, 2024.

This report was prepared in accordance with Milestones 1A-3 and 5 of the Compliance Order, the LEA's follow-up correspondence dated July 30, 2024, Chiquita's letter dated September 3, 2024, the September 12, 2024 meeting with the LEA, and follow-up correspondence from the LEA dated November 19 and 27 and December 3, 2024.

Milestone 1A-3 Compliance Items

1. Submit the laboratory test results for monthly sampling of carbon monoxide (CO) and hydrogen (H₂) from a set of landfill gas (LFG) wells selected by the LEA. Please see Table 1, columns labeled “CO” and “H₂.”

Results for wells monitored are shown in **Attachment A**.¹ The data is being submitted to the LEA in a standalone report signed by a licensed engineer, in accordance with Milestone 1A-3 of the Compliance Order. As noted in Chiquita’s prior correspondence and monthly reports, this report does not include data from wells CV-100, CV-1420, CV-1532, CV-2002, CV-2202, H-1774S, TC-2385A, and TC-2385S, as those wells have been abandoned, or from well CV-2332, as that well was never installed. All remaining points were tested during the month of January 2025.

As discussed during the September 12, 2024 meeting, and as previously reported, graphics showing CO and H₂ trends are provided in **Attachment B** and are discussed further below.

2. Provide data from readings for fixed gases (CH₄, O₂, and CO₂) from a set of LFG wells selected by the LEA. See Table 1, column labeled “Fixed Gas CH₄, O₂, CO₂.”

The results for wells monitored are provided in **Attachment A**.

3. Collect down well temperatures at 34 wells to confirm the gas wellhead temperature readings per the requirement of the New Source Performance Standards (NSPS). See Table 1, column labeled “Down Well Temp Monitoring.”

It is Chiquita’s understanding from the LEA’s November 27, 2024 correspondence that, at this time, Chiquita is only required to sample the wells at the annual frequency provided in the NSPS protocols, but that the LEA may require more frequent monitoring for up to ten (10) wells selected by the LEA. Chiquita is still awaiting the LEA’s selection of those wells.

Chiquita nevertheless provides in **Attachment B** the down hole temperature data collected from the following wells from fixed locations which contain the Lorenz Pumping System with integral temperature sensors: CV-2301, CV-2302, CV-2303, CV-2315, CV-2350, CV-2351, and CV-24017.

Additionally, as noted in the December 2024 monthly report, down well and/or Lorenz Pump temperatures for all wells required by the LEA’s July 30 letter were collected at least once in 2024 with the exception of the five wells noted in that report. SCS will continue to perform down-hole temperature monitoring at the remaining wells on an annual basis and will report those results as the data is obtained at each location.

As previously noted, the pump in well CV-24139 was previously decommissioned.

¹ The lab(s) reported data from additional LFG wells outside of those selected for sampling by the LEA; the additional data is related to separate South Coast Air Quality Management District (South Coast AQMD) reporting requirements and therefore can be disregarded for purposes of this report.

Note that telemetry systems at wells CV-2352 (12-9) and CV-24095 (12-9) remain out of service. These locations are on the list of locations to be repaired upon delivery of additional parts. We were able to obtain temperature data only from Well 24095 which indicated an average temperature of 144 degrees during January 2025, but a graph was not available.

4. Sample the selected 40 wells for VOCs by method TO-15. See Table 1, column labeled “VOC (TO-15).”

The results for wells monitored are provided in **Attachment A**.²

5. Continue to sample and monitor 6 horizontal wells as indicated in Attachment 1, well numbers highlighted in yellow. At this time, 42 horizontal wells may be released from continued sampling, however, wells may be included later depending on future data submissions. See Table 1, well numbers highlighted in blue.

As noted in the September 3 letter and reported in our prior monthly reports, two (2) of the six (6) horizontal wells (H-1774S and H-1560S) were abandoned when the new vertical extraction wells were installed, and thus data from those wells are not included. Data from the four (4) other horizontal wells are in **Attachment A**.

6. Add 20 vertical wells to the monthly wellhead temperature and LFG sampling protocols. See Table 1 well numbers highlighted in green.

As conveyed by the LEA during our September 12, 2024 meeting, and restated in our prior monthly reports, we understand the LEA is requiring laboratory analytical data for fixed gases, CO, and H₂, as well as field data. Laboratory results are in **Attachment A**. Field data with wellhead gas temperatures are shown on Table 2 in **Attachment A**.

We understand from the LEA’s November 27, 2024 correspondence that laboratory analytical data will be required for the specified fixed gases.

Note that following wells were again not sampled in January 2025, for the following reasons:

CV-1420 – Abandoned during 2024 GCCS Expansion due to declining gas flows.

CV-2002 – Abandoned during 2024 GCCS Expansion due to declining gas flows.

CV-2332 – This well does not exist. This well was proposed for installation in Fall 2023, but other wells were installed in the area in lieu of CV-2332 when the number of wells increased pursuant to the Stipulated Order for Abatement (Stipulated Order) with the SCAQMD.

7. Plot to show the locations of the following 19 wells on the site map titled “Existing GCCS Map – LFG Vertical Extraction Wells” dated 06/06/2024: CV-24002, CV-24003, CV-24007, CV-24017, CV-24053, CV-24055, CV-24065, CV-24071, CV-24075, CV-24077, CV-24079,

² Well CV-24142 is listed twice in Table 1 of the LEA’s July 30 letter – one requires VOC sampling, and the other does not. Chiquita sampled this well for VOCs.

CV-24082, CV-24083, CV-24088, CV-24095, CV-24096, CV-24097, CV-24098, H-1403W. For well H-1403W, provide the horizontal location of piping and an estimate where the high temperature (195°F) is most likely occurring. See Table 1, well numbers highlighted in red and H-1403W (highlighted in yellow).

The locations of the above-identified wells are shown on the Map in **Attachment C**.³

8. Include in the monthly report, a settlement/heat map as shown below, beginning with the earliest heat map data available for each month to present. The topographic maps should show 2-foot contour intervals if possible.

The LEA clarified in its correspondence dated November 27 and December 3, 2024 that in lieu of this request, Chiquita could submit quarterly maps together with its monthly fissures and tension cracks summaries, which are submitted on the second Tuesday of each month. Accordingly, Chiquita submitted the Fourth Quarter 2024 isopach map (covering the period between October 2, 2024 and January 3, 2025) to the LEA, together with Chiquita's December monthly fissure and tension crack summary, on January 14, 2025. Nevertheless, for ease of reference, we are resubmitting that Fourth Quarter 2024 map with this report as **Attachment F**.

9. Provide the sampling results in a standalone report with the appropriate discussion, tables, QA/QC, methods and signed by a registered professional, etc., as described in the Compliance Order Milestone 1A-2 and 1A-3.

CCL has provided the above-requested information and the raw data in **Attachment A**, as well as a figure with the data-driven reaction area which incorporates settlement data (see **Attachment F**). Down well temperatures were not collected on any wells during January. Graphs are provided for wells with Lorenz pumps (7 locations). The remaining twenty-seven (27) wells will be tested on an annual basis if the LFG temperature measurements require annual monitoring.

Please note that in addition to the wells listed in response to the request dated July 31, 2024 in Table 1 that could not be tested, the following wells that only required analytical data could also not be tested because they were abandoned during the 2024 GCCS expansion due to declining gas flows in accordance with the requirements of the NSPS: CV-100, CV-1532, H-1560S, H-1774S, TC-2385A, TC-2385S, CV-2002 and CV-1420. Finally, as previously reported, CV-2332 was never installed.

Sampling Procedures

Gas samples were collected using Tedlar/Mylar bags, as described in Chiquita's September 3 letter and the prior monthly reports, and then delivered to certified laboratories for testing.

³ The LEA acknowledged in its November 20, 2024 correspondence that a high temperature is not occurring in well H-1403W. We therefore did not map the maximum temperature at well H-1403W.

All data were analyzed within the requested 24 hours of sampling in compliance with standard lab practices. Note that going forward in accordance with the LEA's November 27, 2024 email, all CO/H₂ analysis will be performed within 24 hours of the sampling date unless and until the LEA approves Chiquita's request to use the EPA-approved 72-hour holding time. In response to the LEA's correspondence dated November 20 and December 3, 2024, SCS provided to the LEA on February 4, 2025 a sampling plan with analytical results of fixed gases (CH₄, CO₂, and O₂) for ten (10) samples collected from ten (10) landfill gas extraction wells located at the Landfill using 24-hour and 72-hour hold time intervals together with QA/QC. See **Attachment G**. The results of that analysis indicate commensurate results from the 24-hour and 72-hour holding times—all of the 72-hour results fell within +/- 10% of the 24-hour results except for one anomaly due to very low levels of the analyte being detected during both analyses. This anomaly is not a cause for concern because the difference in the overall value of the analyte was not significant, as further explained in the submittal. SCS will continue to request 24-hour holding times until the LEA approves Chiquita's request to use 72-hour holding times.

Additional gas and pressure data were collected using either an Envision Irwin Gas Meter or Landtec GEM 5000 Gas monitoring device. These instruments measure combustible gas concentrations in air directly on either of two scales, the first as a percent by volume of the lower explosive limit (LEL) of methane gas in air (0 to 5 percent) and the other as a percent by volume (0 to 100 percent) in the gas sampled. The detection limit for these instruments is approximately 0.10 percent by volume.

Gas monitoring testing procedures were as follows:

- Connect sample tubing, open test valve, observe pressure, and record data.
- Turn on sample pump, purge a minimum of one probe volume, and observe and record methane, oxygen, and carbon dioxide gas concentrations when readings have stabilized.
- Close test valve, disconnect sample instruments, and secure sample location.

Milestone 1A-3 Conclusions

January 2025 was the sixth monitoring performed pursuant to Milestone 1A-3 of the Compliance Order. As stated in the January 15, 2025 report, the data collected and evaluated for this report is consistent with the data collected in the previous months of August through December 2024 and the data collected and evaluated by the Reaction Committee established by the Stipulated Order to assess the reaction area, including the January 2025 data most recently evaluated by the Reaction Committee on February 10, 2025. See **Attachment E**.

For the reasons described in the attached February Reaction Committee report, the alignment of the estimated extent of the elevated temperature landfill (ETLF) conditions exhibited at the Landfill (referred to as the "Reaction Area" limits) remains the same. The Reaction Committee determined that no adjustments were warranted and that ETLF conditions have not expanded.

There was no evidence of reaction conditions or reaction gas present outside of the currently delineated reaction area boundary.

As liquid levels continue to change due to the installation of additional Lorenz Electric and Pneumatic Pumps, we are seeing the anticipated changes in percentages of Permanent Gases, Carbon Monoxide, and Hydrogen and changes to temperatures as more gas is able to be extracted as the levels of liquid decline. This continues to be demonstrated by the multiscale well graphics included in **Attachment D**, which includes graphics on permanent gases, temperature, and other trends over a six (6)-month period. Note that these graphs were created using standard landfill gas monitoring equipment results and do not contain laboratory data. SCS has also included the Hydrogen and Carbon Monoxide graphs for your use and review.

Additionally, the installation of larger diameter piping has improved the collection of additional gases throughout the landfill. Since August 2024, the flow rates of landfill gas being combusted by the abatement devices have increased from 12,050 cfm per day to 13,500 cfm per day. Additionally, the connection of permanent power to the LFG Flare Station has improved operational hours which has resulted in increased overall extraction of gas from the landfill from 538,831,173 to 578,983,640 cubic feet.

Chiquita will continue to evaluate the data in future monthly reports as additional data is collected.

Milestone 5 Compliance Items

This report includes in **Attachment D** individual maps overlaid with the following data for January 2025 in an easily understood format, in accordance with Milestone 5 of the Compliance Order:

- Defined reaction area;
- Expansion of reaction area, if any;
- Weekly TMP data⁴; and
- LFG data including, but not limited to, CH₄, CO₂, O₂, Temperature, CO, and H₂ data.

Milestone 5 also requires “settlement with heat maps,” but as discussed earlier in this report and in accordance with LEA correspondence dated November 27 and December 3, 2024, this requirement was satisfied by Chiquita’s submittal of its Fourth Quarter 2024 isopach map, together with its December 2024 monthly fissures and tension cracks summary, to the LEA

⁴ As previously noted to the LEA, TP-6 and TP-8 were taken offline on certain dates in September and December in order to accommodate continued filling operations in those areas, and offline thermocouples read a default maximum possible temperature of 2,508°F. TP-6 was returned to operation on December 5, 2024. TP-8 was taken offline on December 3, 2024 and was returned to operation on January 9, 2025.

on January 14, 2025. For the LEA's convenience, this map is included herein as **Attachment F**.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S010906-01/10

Enclosed are results for sample(s) received 1/09/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Vinyl acetate, 2-hexanone, benzyl chloride, 1,2,4-trichlorobenzene and ethyl acetate required quadratic regression calibration
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 1/22/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S011307-01/10

Enclosed are results for sample(s) received 1/13/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Chloromethane, vinyl acetate, ethyl acetate and cyclohexanone required quadratic regression calibration. 1,2,4-trichlorobenzene and hexachlorobutadiene required linear regression calibration.
- Benzyl Chloride exhibited low recovery in the initial calibration verification. Results may contain low bias and are qualified with a Q flag.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 1/30/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S011408-01/08

Enclosed are results for sample(s) received 1/14/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Chloromethane, vinyl acetate, ethyl acetate and cyclohexanone required quadratic regression calibration. 1,2,4-trichlorobenzene and hexachlorobutadiene required linear regression calibration.
- Benzyl Chloride exhibited low recovery in the initial calibration verification. Results may contain low bias and are flagged with a Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 2/04/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S011505-01/10

Enclosed are results for sample(s) received 1/15/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Chloromethane, vinyl acetate, ethyl acetate and cyclohexanone required quadratic regression calibration. 1,2,4-trichlorobenzene and hexachlorobutadiene required linear regression calibration.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 1/27/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S011611-01/10

Enclosed are results for sample(s) received 1/16/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for chloromethane, vinyl acetate, and ethyl acetate. Linear regression calibration was required for 1,2,4-trichlorobenzene and hexachlorobutadiene.
- Benzyl chloride exhibited low recovery in the initial calibration verification indicating a low bias. Vinyl acetate exhibited low recovery in the continuing calibration verification indicating a low bias. Results were qualified with the Q flag.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 1/29/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S012004-01/08

Enclosed are results for sample(s) received 1/20/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. – quadratic regression calibration was required for ethanol, ethyl acetate, vinyl acetate, 2-hexanone, benzyl chloride, and 1,2,4-trichlorobenzene.
- Benzyl chloride exhibited low recovery in the initial calibration verification indicating a possible low bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 2/06/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S012104-01/08

Enclosed are results for sample(s) received 1/21/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. – quadratic regression calibration was required for ethanol, ethyl acetate, vinyl acetate, 2-hexanone, benzyl chloride, and 1,2,4-trichlorobenzene.
- Benzyl chloride exhibited low recovery in the initial calibration verification indicating a possible low bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 2/07/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S012204-01/05

Enclosed are results for sample(s) received 1/22/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 2/06/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 11/21/2024 to 1/1/2025

From December 26, 2024, through January 1, 2025, there were no recorded temperature increases and one recorded decrease that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
 - TP-8 was taken offline on October 3rd for filling operations related to the west toe excavation, and offline thermocouples read a default maximum possible temperature of 2,508°F.
- TP-15
 - 30-foot thermocouple showed a decrease in maximum temperature of 10°F from 163°F to 153°F from December 26th to December 31st.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 12/5/2024 to 1/15/2025

From January 9, 2025, through January 15, 2025, there was one recorded temperature increase and two recorded decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Additionally, TP-08 was brought back online and has registered elevated temperatures, as discussed below.

Chiquita provides the following updates:

- TP-08
 - TP-08 was taken offline on October 3rd for filling operations related to the west toe excavation, and offline thermocouples read a default maximum possible temperature of 2,508°F.
 - TP-08 was brought back online on January 10th. The gas and liquid collection infrastructure was also offline in the same area, and the nearby gas wells and pumps were also brought back online on January 10th. Initial temperature readings of TP-08 were higher than the historical average before TP-08 was taken offline.
 - Chiquita notes that filling operations occurred over the prior several months, in which time Chiquita noticed other areas of the reaction area continuing to experience accelerated settlement. It is likely that the accelerated settlement pushed leachate into the TP-08/CV-2479 borehole, which because it was offline, did not allow for the removal of this leachate and landfill gas. With the TMP and well back online, gas and liquids extraction has resumed.
 - Chiquita further notes that drilling activities for TP-24, geographically nearby, achieved a depth of 297 feet without encountering significantly elevated temperatures, further supporting that the increased temperature readings are due to the presence of localized leachate accumulation limited to the TP-08 borehole.
 - A reduction in temperatures has been recorded since resuming operation, and those decreases are noted below:
 - 100-foot thermocouple showed a decrease of 19°F degrees from 215°F to 196°F from January 10th to January 15th.
 - 125-foot thermocouple showed a decrease of 23°F degrees from 232°F to 209°F from January 10th to January 14th.
- TP-15
 - 30-foot thermocouple showed an increase in maximum temperature of 12°F from 166°F to 178°F from January 8th to January 13th.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 12/12/2024 to 1/22/2025

From January 16, 2025, through January 22, 2025, there was one recorded temperature increase and four recorded decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Additionally, TP-08 was brought back online and has registered elevated temperatures, as noted in last week's update and discussed further below.

Chiquita provides the following updates:

- TP-08
 - TP-08 was taken offline on October 3rd for filling operations related to the west toe excavation.
 - TP-08 was brought back online on January 10th. The gas and liquid collection infrastructure was also offline in the same area, and the nearby gas wells and pumps were also brought back online on January 10th. Initial temperature readings of TP-08 were higher than the historical average before TP-08 was taken offline.
 - As noted in last week's update, filling operations occurred over the prior several months, in which time Chiquita noticed other areas of the reaction area continuing to experience accelerated settlement. It is likely that the accelerated settlement pushed leachate into the TP-08/CV-2479 borehole, which because it was offline, did not allow for the removal of this leachate and landfill gas. With the TMP and well back online, gas and liquids extraction has resumed.
 - As also noted in last week's update, drilling activities for TP-24, geographically nearby, achieved a depth of 297 feet at that time without encountering significantly elevated temperatures, further supporting that the increased temperature readings are due to the presence of localized leachate accumulation limited to the TP-08 borehole.
 - 15-foot thermocouple showed an increase in maximum temperature of 12°F from 165°F to 177°F from January 10th to January 16th. This is indicative of the heat being extracted and lowered at deeper depths and this hotter gas passing through the shallow zone.
 - A continued reduction in temperatures has been recorded in the 100-foot, 125-foot, and 150-foot thermocouples since the previous week:
 - 100-foot thermocouple showed a decrease of 22°F degrees from 215°F to 193°F from January 10th to January 22nd.
 - 125-foot thermocouple showed a decrease of 25°F degrees from 232°F to 207°F from January 10th to January 22nd.
 - 150-foot thermocouple showed a decrease of 8°F degrees from 230°F to 222°F from January 11th to January 22nd.
- TP-15
 - 30-foot thermocouple showed a decrease in maximum temperature of 14°F from 178°F to 164°F from January 13th to January 21st.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 12/19/2024 to 1/29/2025

From January 23, 2025, through January 29, 2025, there was two recorded temperature increase and four recorded decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Additionally, as noted previously and discussed further below, TP-08 was brought back online earlier this month and has registered elevated temperatures.

Chiquita provides the following updates:

- TP-06
 - 45-foot thermocouple showed a decrease in maximum temperature of 10°F from 138°F to 128°F from January 19th to January 25th, an increase in maximum temperature of 11°F from 128°F to 139°F from January 25th to January 28th, and then a decrease in maximum temperature of 8°F from 139°F to 131°F from January 28th to January 29th.
 - 60-foot thermocouple showed a decrease in maximum temperature of 14°F from 147°F to 133°F from January 18th to January 26th, an increase in maximum temperature of 15°F from 133°F to 148°F from January 26th to January 28th, and then a decrease in maximum temperature of 12°F from 148°F to 136°F from January 28th to January 29th.
- TP-08
 - TP-08 was taken offline on October 3rd for filling operations related to the west toe excavation.
 - TP-08 was brought back online on January 10th. The gas and liquid collection infrastructure was also offline in the same area, and the nearby gas wells and pumps were also brought back online on January 10th. Initial temperature readings of TP-08 were higher than the historical average before TP-08 was taken offline.
 - As noted in last week's update, filling operations occurred over the prior several months, in which time Chiquita noticed other areas of the reaction area continuing to experience accelerated settlement. It is likely that the accelerated settlement pushed leachate into the TP-08/CV-2479 borehole, which because it was offline, did not allow for the removal of this leachate and landfill gas. With the TMP and well back online, gas and liquids extraction has resumed.
 - As also noted in last week's update, drilling activities for TP-24, geographically nearby, achieved a depth of 297 feet without encountering significantly elevated temperatures, further supporting that the increased temperature readings are due to the presence of localized leachate accumulation limited to the TP-08 borehole.
 - A continued reduction in temperatures has been recorded in the 15-foot, 30-foot, 45-foot, 100-foot, 125-foot, and 150-foot thermocouples since the previous week:
 - 15-foot thermocouple showed a decrease of 8°F degrees from 177°F to 169°F from January 10th to January 29th.
 - 30-foot thermocouple showed a decrease of 9°F degrees from 190°F to 181°F from January 8th to January 29th.
 - 45-foot thermocouple showed a decrease of 7°F degrees from 192°F to 185°F from January 10th to January 29th.
 - 100-foot thermocouple showed a decrease of 25°F degrees from 215°F to 191°F from January 10th to January 28th.
 - 125-foot thermocouple showed a decrease of 29°F degrees from 232°F to 203°F from January 10th to January 28th.
 - 150-foot thermocouple showed a decrease of 12°F degrees from 230°F to 218°F from January 11th to January 28th.
- TP-15
 - 30-foot thermocouple remained consistent with previous temperature decreases.

Diamond Bar, California 91765

Subject: Monthly Reaction Committee Determination on Reaction Area Boundary
Chiquita Canyon Landfill – Castaic, California

Dear Mr. Chen:

In accordance with Condition Nos. 9a and 9b of the Modified Stipulated Order for Abatement (SOFA) pertaining to the Chiquita Canyon Landfill (Landfill or Facility) (Case No. 6177-4), the Reaction Committee has reviewed newly acquired applicable data recorded during the month of January 2025, considered revisions of the estimated extent of elevated temperature landfill (ETLF) conditions exhibited at the subject Facility (referred to as the “Reaction Area” limits), and has prepared this determination on potentially revising the Reaction Area map.

Attachment A presents the Drawing, titled “Reaction Area Map”, prepared by SCS Engineers (SCS) and dated 2/10/25. The Drawing depicts the Reaction Area boundary as prescribed in Condition No. 9a, which corresponds to the limits of Cells 1/2A, 2B/3, 4, and Module 2B/3/4 P2, as a solid black line. The Drawing also depicts the estimated extent of ETLF conditions being experienced at the site based on the Reaction Committee’s review of scientific data as a dashed magenta line.

The rationale that serves as the basis for considering adjustments and modifications to the Reaction Area boundary (or the determination to maintain the decreed boundary), include the following:

- LFG wellhead temperatures in excess of approximately 160 degrees Fahrenheit.
- Poor gas quality (defined as methane levels of less than 30 percent) in conjunction with methane-to-carbon dioxide (CH₄:CO₂) ratios less than 1.0.
- The concentration of hydrogen (H₂) in the LFG measured greater than 2 percent by volume.
- Accelerated settlement of the landfill surface, defined as approximately 18 inches or greater within a 60-day period, and cracks in landfill cover. This corresponds to a strain value (i.e., settlement rate) rate of 3 percent per year for areas with a 300-foot waste column depth, which we believe is a reasonable average depth in the subject area of interest.
- First-hand observations of Landfill and/or SCS engineering, construction, and operations and maintenance (O&M) field personnel who are on-site related to: 1) atypical excess leachate quantities (presence and quantity of liquids); 2) instances of pressurized liquids emitting from the landfill surface, from boreholes during drilling, and from LFG wells; and, 3) the characteristics of the odors originating from the select areas of the waste footprint (often described as “chemical-like” and distinctly different from typical LFG or landfill working face odors).

- Observations of subsurface waste conditions and characteristics as noted on borehole drilling logs for recently installed new wells and/or probes.
- Subsurface temperatures recorded at the in-situ waste temperature probes during January 2025.
- Subsurface temperatures and pressures noted during the sonic drilling of new waste temperature probes during January 2025.

CONSIDERATIONS FOR POTENTIAL ADJUSTMENTS TO THE ESTIMATED EXTENT OF ETLF CONDITIONS (DASHED MAGENTA LINE)

Near CV-24079 & TP-8

Recall that well CV-24079 and temperature monitoring probe no. 8 ("TP-8") were temporarily decommissioned on October 3, 2024 to facilitate the construction activities associated with the western slope toe drain and capping project. Upon completion of the construction activities, well CV-24079 and Probe TP-8 were reactivated on January 10, 2025. Upon recommissioning, the initial temperatures recorded at the deeper intervals within TP-8 were significantly greater than previous data recorded prior to October 3rd. Similarly, the initial LFG temperatures recorded at the wellhead in CV-24079 were substantially greater than LFG temperatures recorded prior to October 3rd. Also, the methane content during the first three weeks fluctuated but remained suppressed below 20 percent. However, during the first week of February, these three parameters (in-situ waste temperature, gas temperature, and methane content) all exhibited a definitive return to more typical conditions associated with normal methanogenesis, with substantial temperature decreases measured in the probe and wellhead, and methane concentration increasing to 35 percent. Furthermore, the operational data recorded at adjacent wells CV-24078 and CV-24080 does not exhibit evidence of elevated temperature conditions. Accordingly, the Reaction Committee does not believe that any adjustment to the estimated extent of ETLF conditions in this discrete location is warranted at this time, since the data recorded during this relatively short period is variable and does not appear to consistently signal a potential expansion of the subsurface reaction.

CONCLUSION

The Reaction Committee reviewed the temperature measurements recorded during January 2025 by the in-situ temperature monitoring probes. As of January 2025, four (4) of the twenty (20) probes (TP-2, 3, 9, and 15) are located within the estimated extent of ETLF conditions (dashed magenta line), and twelve (12) probes are positioned adjacent to (within 200 feet) of this boundary. It is the Committee's opinion that the temperatures recorded by the 12 probes outside of the boundary during January 2025 are not indicative of a subsurface reaction and do not substantiate a decision to adjust the boundary of the reaction area at this time. However, we continue to observe the measurements being recorded by TP-8 and the corresponding co-located well CV-24079 to evaluate whether a clear trend in temperature (either increasing or decreasing) develops over the next several weeks.

The Reaction Committee also evaluated the concentration of hydrogen in landfill gas (LFG) during January 2025. Recall that certain wells positioned to the south and east of the reaction area

boundary (where dewatering pumping was reactivated) have periodically demonstrated some increased hydrogen content in the LFG during the Reaction Committee's review of the data in previous months, which similarly was the case for the January data. The Reaction Committee noted in its review of the data that these wells did not exhibit elevated temperatures, such that there was no evidence of the increased heat that is typical with ETLF conditions present at these wells. The Committee suspects this increased hydrogen content may be attributable to substantial dewatering being accomplished throughout the Reaction Area and may be associated with gas movement from within the reaction area by existing horizontal collectors in close proximity. Thus, the presence of elevated hydrogen in these isolated locations does not suggest that ETLF conditions are expanding south and east of the delineated boundary. Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the reaction area is merited at this time.

As presented on the Drawing included as **Attachment A**, the estimated extent of ETLF conditions (dashed magenta line) is fully contained within the Reaction Area boundary decreed in the SOFA (solid black line). Because the ETLF conditions are fully contained within the Reaction Area boundary and have not expanded into a new cell, the Reaction Committee finds no basis to modify the Reaction Area boundary as prescribed in Condition 9a at this time.

There was no dissenting opinion among the Reaction Committee members regarding this monthly determination. Supporting data is presented on the Drawing included as **Attachment A**. The maximum temperature measurements recorded at the 20 in-situ waste temperature monitoring probes during January are presented in **Attachment B** in graphical format. The landfill gas wellhead temperatures recorded at the extraction wells in the vicinity of the data-driven reaction area boundary are reflected on the isothermal gradient range map present as **Attachment C**. The carbon monoxide (CO) concentrations measured at the landfill gas wellheads are depicted on the range map presented as **Attachment D**. The electronic database and recordkeeping platform enables these measurements to be downloaded into a tabular spreadsheet format, which can be submitted to the South Coast Air Quality Management District under separate cover, if requested.

Please contact either of the undersigned if you have questions or require additional information.

Sincerely,

Robert E. Dick, PE, BCEE

LFG Vertical Extraction Wells & Temperature Probes Installed: JANUARY, 2024							
#	Well I.D.	Temp. Probe I.D.	Bore Depth (Ft.)	Casing Depth (Ft.)	Date of Installation	Excavated/Exposed Waste Characterization	Excavated/Exposed Waste Moisture
1	-	TP-24	320	320	1/23/2025	None to Little → Severe	Dry → Saturated

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 12/19/2024 to 1/29/2025

From January 23, 2025, through January 29, 2025, there was two recorded temperature increase and four recorded decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Additionally, as noted previously and discussed further below, TP-08 was brought back online earlier this month and has registered elevated temperatures.

Chiquita provides the following updates:

- TP-06
 - 45-foot thermocouple showed a decrease in maximum temperature of 10°F from 138°F to 128°F from January 19th to January 25th, an increase in maximum temperature of 11°F from 128°F to 139°F from January 25th to January 28th, and then a decrease in maximum temperature of 8°F from 139°F to 131°F from January 28th to January 29th.
 - 60-foot thermocouple showed a decrease in maximum temperature of 14°F from 147°F to 133°F from January 18th to January 26th, an increase in maximum temperature of 15°F from 133°F to 148°F from January 26th to January 28th, and then a decrease in maximum temperature of 12°F from 148°F to 136°F from January 28th to January 29th.
- TP-08
 - TP-08 was taken offline on October 3rd for filling operations related to the west toe excavation.
 - TP-08 was brought back online on January 10th. The gas and liquid collection infrastructure was also offline in the same area, and the nearby gas wells and pumps were also brought back online on January 10th. Initial temperature readings of TP-08 were higher than the historical average before TP-08 was taken offline.
 - As noted in last week's update, filling operations occurred over the prior several months, in which time Chiquita noticed other areas of the reaction area continuing to experience accelerated settlement. It is likely that the accelerated settlement pushed leachate into the TP-08/CV-2479 borehole, which because it was offline, did not allow for the removal of this leachate and landfill gas. With the TMP and well back online, gas and liquids extraction has resumed.
 - As also noted in last week's update, drilling activities for TP-24, geographically nearby, achieved a depth of 297 feet without encountering significantly elevated temperatures, further supporting that the increased temperature readings are due to the presence of localized leachate accumulation limited to the TP-08 borehole.
 - A continued reduction in temperatures has been recorded in the 15-foot, 30-foot, 45-foot, 100-foot, 125-foot, and 150-foot thermocouples since the previous week:
 - 15-foot thermocouple showed a decrease of 7°F degrees from 177°F to 170°F from January 16th to January 29th.
 - 30-foot thermocouple showed a decrease of 9°F degrees from 190°F to 181°F from January 10th to January 29th.
 - 45-foot thermocouple showed a decrease of 7°F degrees from 192°F to 185°F from January 10th to January 29th.
 - 100-foot thermocouple showed a decrease of 24°F degrees from 215°F to 191°F from January 10th to January 29th.
 - 125-foot thermocouple showed a decrease of 29°F degrees from 232°F to 203°F from January 10th to January 29th.
 - 150-foot thermocouple showed a decrease of 12°F degrees from 230°F to 218°F from January 10th to January 29th.
- TP-15
 - 30-foot thermocouple remained consistent with previous temperature decreases.

Subject: Fixed Gas (CH₄, CO₂, O₂) Analytical Results for LEA Selected Wells Using 24-Hour and 72-Hour Hold Times for Chiquita Canyon Landfill, Castaic, California

Dear Ms. Gork:

SCS Engineers (SCS), on behalf of Chiquita Canyon, LLC (Chiquita), hereby provides the Los Angeles County Department of Public Health, Solid Waste Management Program, acting as the Local Enforcement Agency (LEA), with the analytical results of fixed gases (CH₄, CO₂, and O₂) for ten (10) samples collected from ten (10) landfill gas (LFG) extraction wells located at the Chiquita Canyon Landfill (Landfill) using 24-hour and 72-hour intervals. This study was conducted in accordance with LEA correspondence to demonstrate that the analyses at 24- and 72-hour holding times yield similar results, to support Chiquita's request to use the EPA approved 72-hour holding time for the Milestone 1A-3 & 5 data.

The LEA's November 20, 2024 correspondence regarding Milestone 1A-3 & 5 stated:

If the CCL would like to use a 72-hour turnaround using Tedlar bags for fixed gases, then the CCL may submit a sampling plan with QA/QC to determine if the 24/72 holding times are similar. The plan shall include a minimum of 10 samples from 10 discreet Tedlar bags sampled for fixed gases at 24-hour and 72-hour intervals. The results should be less than +/-10%. Once the results are submitted and approved by the LEA, the landfill may proceed using the 72-hour sampling time.

The LEA further stated in its December 3, 2024 reply to Chiquita's November 27, 2024 letter that if a 24-hour hold time using Tedlar bags is not possible, then Chiquita could use summa canisters for samples.

Samples were collected on December 16, 2024 and analyzed for the fixed gases listed in Milestones 1A-3 and 5 of the LEA Compliance Order dated June 6, 2024 (Compliance Order)

(CH₄, CO₂, and O₂) within 24 hours, on December 16, 2024, and again within 72 hours, on December 19, 2024. Air Technology Laboratories, Inc. provided standard QA/QC during analysis. Sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards. Final results and QA/QC are provided in **Attachment A**.

Below is a summary of the results for fixed gases (CH₄, CO₂, and O₂) of 10 wells (CV-2351, CV-2352, CV-2353, CV-2354, CV-24099, CV-24102, CV-24139, CV-24140, CV-24141, and CV-24143) along with the associated change in results between samples analyzed within 24 and 72 hours.

	Performed
Sample Collection	12/16/2024
Analysis within 24 hours	12/16/2024
Analysis within 72 hours	12/19/2024

Well ID	Methane (%v/v)			Carbon Dioxide (%v/v)			Oxygen (%v/v)		
	24 Hour HT	72 Hour HT	Change (%)	24 Hour HT	72 Hour HT	Change (%)	24 Hour HT	72 Hour HT	Change (%)
CV-2351	2.9	2.9	0.0%	78	78	0.0%	0.52	0.53	1.9%
CV-2352	1.4	1.5	6.7%	67	66	-1.5%	2.3	2.5	8.0%
CV-2353	1.5	1.5	0.0%	67	66	-1.5%	1.9	2.1	9.5%
CV-2354	13	12	-8.3%	69	70	1.4%	0.66	0.64	-3.1%
CV-24099	18	19	5.3%	78	75	-4.0%	ND	0.92	---
CV-24102	0.62	0.62	0.0%	2.6	2.6	0.0%	20	20	0.0%
CV-24139	2.5	2.4	-4.2%	71	71	0.0%	ND	0.67	---
CV-24140	3.5	3.4	-2.9%	54	54	0.0%	5.6	5.8	3.4%
CV-24141	40	39	-2.6%	54	54	0.0%	0.70	0.82	14.6%
CV-24143	6.8	6.8	0.0%	45	46	2.2%	7.6	7.5	-1.3%

The 24-hour vs 72-hour analyses of these 10 well samples confirm that the holding times are similar and that the additional 48 hours to analyze these samples does not significantly impact the results for CH₄, CO₂, or O₂. All results of the 72-hour analysis fell within +/- 10% of the 24-hour results, except for one result (O₂ at CV-24141) where a single analyte was 14.6% higher using the 72-hour sampling time due to very low levels of the analyte detected during both analyses. This 14.6% difference is not a cause for concern because the difference in the overall value of the analyte is only 0.12 %v/v. which is not significant. The overall average of the absolute value for change was 3.0% for CH₄, 1.1% for CO₂, and 5.2% for O₂.

Given the results of this 24-hour vs 72-hour analyses comparison, we respectfully request that the LEA approve Chiquita's request for a 72-hour holding time for fixed gas analysis of samples collected at Chiquita Canyon Landfill for satisfying Milestone 1A-3 & 5 and similar reporting requirements.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: R121605-01/20

Enclosed are results for sample(s) received 12/16/24 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Vinyl acetate, 2-hexanone, benzyl chloride, 1,2,4-trichlorobenzene and ethyl acetate required quadratic regression calibration.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 1/03/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,
