---

Dear Mr. Habaradas,

In accordance with the LEA's June 6, 2024 Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from January 2, 2025, through February 12, 2025, with a map of the maximum temperatures recorded in the past week, and the below narrative on recorded temperature data. The maximum temperature recorded for the eight recently installed temperature probes were not able to be included in time for this week's submittal and will be included starting with next week's submittal. We included a separate map demonstrating the locations of the original 20 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD. The new temperature probes will be added to the weekly update maps starting with next week's report.

From February 6, 2025, through February 12, 2025, there were two recorded temperature increases and ten recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Additionally, as noted previously and discussed further below, TP-08 was brought back online in January and initially registered elevated temperatures that have since decreased significantly. The temperature decreases associated with TMP-08 are due to the heat extraction by re-connecting the vacuum and pump to the nearby wells after the area was filled in.

Additionally, as of February 7, 2025, eight new TMPs (TMP-25, TMP-26, TMP-27, TMP-29, TMP-30, TMP-31, TMP-32, and TMP-34) have been installed and are online. None of these eight new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the three TMPs that were able to be drilled to within 20 feet of the liner (TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth. This data further supports the previous conclusions of cooler temperatures near the liner and the liner's integrity being uncompromised by elevated temperatures.

Chiquita provides the following updates:

- \* TP-08
  - \* TP-08 was taken offline on October 3rd for filling operations related to the west toe excavation.
  - \* TP-08 was brought back online on January 10th, which was the first day temperature readings were collected at

TP-08. The gas and liquid collection infrastructure was also offline in the same area, and the nearby gas wells and pumps were also brought back online on January 10th. Initial temperature readings of TP-08 were higher than the historical average before TP-08 was taken offline.

- \* As noted in previous updates, filling operations occurred over the prior several months, in which time Chiquita noticed other areas of the reaction area continuing to experience accelerated settlement. It is likely that the accelerated settlement pushed leachate into the TP-08/CV-2479 borehole, which because it was offline, did not allow for the removal of this leachate and landfill gas. With the TMP and well back online, gas and liquids extraction has resumed.
- \* As also noted in previous updates, drilling activities for TP-24, geographically nearby, achieved a depth of 297 feet without encountering significantly elevated temperatures, further supporting that the increased temperature readings are due to the presence of localized leachate accumulation limited to the TP-08 borehole.
- \* A continued reduction in temperatures has been recorded in the 15-foot, 30-foot, 45-foot, 100-foot, 125-foot, and 150-foot thermocouples since the previous week:
  - \* 15-foot thermocouple showed a decrease of 19°F degrees from 177°F to 158°F from January 16th to February 12th.
  - \* 30-foot thermocouple showed a decrease of 23°F degrees from 190°F to 167°F from January 10th to February 12th.
  - \* 45-foot thermocouple showed a decrease of 24°F degrees from 192°F to 168°F from January 10th to February 12th.
  - \* 100-foot thermocouple showed a decrease of 46°F degrees from 215°F to 169°F from January 10th to February 12th.
  - \* 125-foot thermocouple showed a decrease of 65°F degrees from 232°F to 167°F from January 10th to February 12th.
  - \* 150-foot thermocouple showed a decrease of 53°F degrees from 230°F to 177°F from January 10th to February 12th.
- \* TP-10
  - \* 30-foot thermocouple showed a decrease in maximum temperature of 21°F from 133°F to 112°F from February 2nd to February 9th, and then an increase in maximum temperature of 12°F from 112°F to 124°F from February 9th to February 12th. This resulted in an overall decrease in maximum temperature of 9°F.
- \* TP-14
  - 15-foot thermocouple showed a decrease in maximum temperature of 13°F from 129°F to 116°F from February 8th to February 12th.
- \* TP-15
  - 30-foot thermocouple showed an increase in maximum temperature of 15°F from 168°F to 183°F from February 4th to February 11th.
- \* TP-19
  - \* 45-foot thermocouple showed a decrease in maximum temperature of 9°F from 151°F to 142°F from February 4th to February 12th.
- \* TP-20
  - \* 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 141°F to 130°F from February 8th to February 10th.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no sensors had anomalies, outliers, data gaps, or malfunctions. In the past week, other than the above-described issues, there were no recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than

20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024 and October 4, 2024 adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area, but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024 response that was used as a basis for the LEA's October 4, 2024 letter.

We will continue to update the LEA weekly on the TMP readings and to notify the LEA by e-mail within 24 hours of any recorded temperature change in the TMP field of greater than 20°F within 24 hours or less.

As requested in the LEA's December 24, 2024 letter, Chiquita is also providing the below update on the installation of the additional TMPs. Chiquita submitted on January 29, 2025 a response to the LEA's December 24, 2024 letter regarding the deletion of TP-33.

Chiquita is also including information responsive to the LEA's February 11, 2025 email. Please note that the software cannot produce a Thirty-Day Max Vertical Temperature Map for January that shows a high temperature less than 2,508°F for TP-08 because TP-08 offline for the beginning part of January and offline thermocouples read a default maximum possible temperature of 2,508°F. Please also note that the graph for each TMP in the attached PDF notes the weekly maximum temperature for each TMP. January 10, 2025 was the weekly maximum for the January 9 through January 16, 2025 period for TP-08 only, as shown in last week's submittal.

#### **As of 2/12/2025 – Status of TMP installation:**

Chiquita has been diligently working to install the additional temperature probes as part of the LEA's June 6, 2024 Compliance Order and related LEA correspondence. To accomplish this, Chiquita contracted first with a sonic drill rig which was able to install the first 10 additional temperature probes, 25, 26, 27, 28, 29, 30, 31, 32, 34, and 35. During these drilling events many locations collapsed due to the presence of liquids saturating the waste and preventing drilling to the full planned depth. As such, the sonic drill rig was mobilized off-site. To be able to install the remaining four locations (temperature probes 21, 22, 23, and 24), three of which are located inside the most concentrated area of the Elevated Temperature Landfill ("ETLF") conditions, Chiquita contracted with a "mud rotary" style drill rig, in part based on their reputation from other area landfills.

In drilling temperature probe locations with this mud rotary rig, Chiquita achieved good progress in drilling through the reaction zone and post-reacted material, regularly achieving depths below the suspected/anecdotal reaction zone. Mud rotary drilling was successful, for example, in allowing TMP-24 to drill to within 25 feet of the liner system. However, to "set" the casing for the temperature probe, this style of drill rig must remove the drill stem from the hole, a process that involves de-coupling every 20-foot segment of drill stem. After the drill stem is removed from the hole, the rig then pushes the casing down hole, a process that again involves coupling every 20-foot segment of pipe. These processes take time, which in practice resulted in the borehole wall losing integrity and the drilled hole closing back up, which then does not allow the casing to be completed to the depth drilled. In drilling one location alone (TMP-21), Chiquita notes that the borehole closed back up and reaction material flowed back into the borehole for the entire suspected reaction zone length two separate times. For this reason, the temperature probe was only able to be set at 110 feet below ground surface, which is just above the anecdotal reaction zone.

As a result of the foregoing, Chiquita is suspending installation of the remaining two temperature probes (TMP-22 and TMP-23). Borehole integrity in this area will remain a concern until additional dewatering efforts demonstrate less saturation within the waste mass. Chiquita is proposing to reevaluate installation of the remaining two temperature probes beginning in October 2025.

The thermocouple sensors for TMP-21 and TMP-24, along with TMP-28 and TMP-35, will be ordered with installation

anticipated by April 4, 2025. The following is an anticipated completion date chart for receiving and installing temperature sensor equipment onsite.

| Task                                                                                     | Corresponding Temperature Probe    | Estimated Completion Date |
|------------------------------------------------------------------------------------------|------------------------------------|---------------------------|
| Receipt of temperature sensors and remote telemetry heads for first 8 TMPs               | 25, 26, 27, 29, 30, 31, 32, and 34 | Completed (1/24/2025)     |
| Installation of temperature sensors and telemetry heads for first 8 TMPs                 | 25, 26, 27, 29, 30, 31, 32, and 34 | Completed (2/7/2025)      |
| Estimated receipt of temperature sensors and remote telemetry heads for remaining 4 TMPs | 21, 24, 28, and 35                 | 3/14/2025                 |
| Installation of temperature sensors and telemetry heads for remaining 4 TMPs             | 21, 24, 28, and 35                 | 4/4/2025                  |

# Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 1/2/2025 to 2/12/2025

From February 6, 2025, through February 12, 2025, there were two recorded temperature increases and ten recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Additionally, as noted previously and discussed further below, TP-08 was brought back online in January and initially registered elevated temperatures that have since decreased significantly. The temperature decreases associated with TMP-08 are due to the heat extraction by re-connecting the vacuum and pump to the nearby wells after the area was filled in.

Additionally, as of February 7, 2025, eight new TMPs (TMP-25, TMP-26, TMP-27, TMP-29, TMP-30, TMP-31, TMP-32, and TMP-34) have been installed and are online. None of these eight new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the three TMPs that were able to be drilled to within 20 feet of the liner (TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth. This data further supports the previous conclusions of cooler temperatures near the liner and the liner's integrity being uncompromised by elevated temperatures.

Chiquita provides the following updates:

- TP-08

- TP-08 was taken offline on October 3rd for filling operations related to the west toe excavation.
- TP-08 was brought back online on January 10th. The gas and liquid collection infrastructure was also offline in the same area, and the nearby gas wells and pumps were also brought back online on January 10th, which was the first day temperature readings were collected at TP-08. Initial temperature readings of TP-08 were higher than the historical average before TP-08 was taken offline.
- As noted in previous updates, filling operations occurred over the prior several months, in which time Chiquita noticed other areas of the reaction area continuing to experience accelerated settlement. It is likely that the accelerated settlement pushed leachate into the TP-08/CV-2479 borehole, which because it was offline, did not allow for the removal of this leachate and landfill gas. With the TMP and well back online, gas and liquids extraction has resumed.
- As also noted in previous updates, drilling activities for TP-24, geographically nearby, achieved a depth of 297 feet without encountering significantly elevated temperatures, further supporting that the increased temperature readings are due to the presence of localized leachate accumulation limited to the TP-08 borehole.
- A continued reduction in temperatures has been recorded in the 15-foot, 30-foot, 45-foot, 100-foot, 125-foot, and 150-foot thermocouples since the previous week:
  - 15-foot thermocouple showed a decrease of 19°F degrees from 177°F to 158°F from January 16th to February 12th.
  - 30-foot thermocouple showed a decrease of 23°F degrees from 190°F to 167°F from January 10th to February 12th.
  - 45-foot thermocouple showed a decrease of 24°F degrees from 192°F to 168°F from January 10th to February 12th.
  - 100-foot thermocouple showed a decrease of 46°F degrees from 215°F to 169°F from January 10th to February 12th.
  - 125-foot thermocouple showed a decrease of 65°F degrees from 232°F to 167°F from January 10th to February 12th.
  - 150-foot thermocouple showed a decrease of 53°F degrees from 230°F to 177°F from January 10th to February 12th.

- TP-10

- 30-foot thermocouple showed a decrease in maximum temperature of 21°F from 133°F to 112°F from February 2nd to February 9th, and then an increase in maximum temperature of 12°F from 112°F to 124°F from February 9th to February 12th. This resulted in an overall decrease in maximum temperature of 9°F.

- TP-14

- 15-foot thermocouple showed a decrease in maximum temperature of 13°F from 129°F to 116°F from February 8th to February 12th.

- TP-15

- 30-foot thermocouple showed an increase in maximum temperature of 15°F from 168°F to 183°F from February 4th to February 11th.

- TP-19

- 45-foot thermocouple showed a decrease in maximum temperature of 9°F from 151°F to 142°F from February 4th to February 12th.

- TP-20

- 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 141°F to 130°F from February 8th to February 10th.
