1.0 INTRODUCTION

This revised Fourth Quarter 2024 Enhanced Air Monitoring Report has been prepared upon discovery of a data discrepancy where the continuous monitoring data was inadvertently included in the discrete sampling results. This discrepancy has led to inflated values for the detections in the discrete sampling results.

This revised submittal covers the period from October 1 to December 31, 2024 and has been prepared for the Los Angeles County Department of Public Health (DPH) by SCS Engineers (SCS) on behalf of Chiquita Canyon, LLC (Chiquita) as part of Chiquita's enhanced air monitoring program (EAMP) for the Chiquita Canyon Landfill (Landfill). The enhanced air monitoring program recommendations were presented in an August 15, 2023 workplan (Workplan) submitted to DPH. After consultation with Chiquita's toxicologists from the Center for Toxicology and Environmental Health (CTEH), the EAMP was further expanded to include collection of weekly 24-hour composite samples analyzed for volatile organic compounds (VOCs) and total reduced sulfur (TRS) at the seven off-site monitoring station locations (MS-06 through MS-12).

Please note, in response to the Unilateral Administrative Order (UAO) issued by the United States Environmental Protection Agency (EPA) on February 21, 2024, an updated Workplan was implemented for the EAMP to address the requirements of the UAO. In addition, both the BTEX and TRS monitors at MS-12 were removed during the reporting period to allow room for the installation of the micro-GC as required by the Modified Stipulated Order for Abatement with South Coast Air Quality Management District (SCAQMD); as such, the dataset for this location will be incomplete.

In accordance with the Workplan dated May 2024, the EAMP includes the following components:

- Weekly TRS, odor, and expanded VOC grab sampling at all 12 monitoring station (MS or station) locations.
- Weekly TRS, odor, and expanded VOC grab sampling at two additional on-site locations and three additional off-site locations (17 locations in total).
- Installation of micro-GCs at two (2) offsite locations (MS-10 and MS-12) to monitor an expanded list of VOCs as part of the Modified Stipulated Order For Abatement (SOFA). A complete list of analytes is found in Table 1 of the updated Workplan.

A map showing the locations of the monitoring stations and additional sampling locations is included as **Figure 1**. As shown on **Figure 1**, MS-01 through MS-05 are located around the perimeter of the Landfill, MS-06 through MS-12 are located in the community surrounding the Landfill, and the additional sampling locations are located along Hasley Canyon Road and Chiquito Canyon Road.

A summary of the methods, results and analysis of the data collected from the fourth quarter of 2024 is presented below. In addition, all monitoring data referenced in this report has been provided to DPH under separate cover via monthly monitoring updates. Per the request of DPH, copies of the raw analytical and monitoring data that was previously provided have been included in this report. A copy of the Monthly EAMP Reports during the fourth quarter of 2024 are included in **Appendix A**.

2.0 QUARTERLY MONITORING AND SAMPLING SUMMARY

CONTINUOUS MONITORING

Chiquita has a network of twelve air monitoring stations with seven stations located throughout the community surrounding the Landfill (MS-06 through MS-12) and the remaining five stations located on-site (MS-01 through MS-05), around the Landfill perimeter.

Beginning in late August and into early September 2023, SCS added two additional monitoring modules to MS-04 and MS-12. MS-04 is located in the northwest corner of the Landfill. MS-12 is located in the community of Val Verde, approximately 0.5 miles northwest of the Landfill. The additional modules provide continuous SO_2 measurement. As of June 26, 2024, SCS added continuous SO_2 modules for all remaining onsite and offsite air monitoring stations.

As of September 2024, eight additional micro-GC units were installed as required by the UAO.

DISCRETE SAMPLING

Discrete Samples

On a weekly basis, seventeen (17) grab samples are taken at various community and on-site locations, including both the reaction area and the working face. Grab samples collected are analyzed for an expanded list of VOCs, TRS, and odor.

Samples are analyzed for VOCs using U.S. Environmental Protection Agency (EPA) Method TO-15. TRS samples are analyzed using South Coast Air Quality Management District (SCAQMD) Method 307.91. Odor samples are analyzed using a Scentroid SS400 Six Station Portable Olfactometer (SS400), a method compliant with American Society for Testing and Materials (ASTM) E679-04. Results of the odor samples for the reporting period are contained in the Monthly EAMP Reports included in **Appendix A**.

The analytes are listed in **Table 1** below.

Time-composite samples are collected over a 24-hour period and analyzed for the same constituents as the discrete samples (refer to **Table 1**).

3.0 DATA REVIEW

CONTINUOUS MONITORING

Micro-GC Data

In response to the modified SOFA issued by SCAQMD on January 17, 2024, two micro-GC units were installed at MS-10 and MS-12 by the May 1, 2024 deadline. The continuous air monitoring results are hosted online through the Chiquita Canyon website. As of September 2024, eight micro-GC units were brought online as required under the UAO. A link to the real time, continuous data is found below:

https://chiquitacanyon.com/reports/community-air-monitoring-program/

Data is publicly available for viewing and download on the website.

Over the reporting period, there was variation in the measured compounds, but no strong trend of increasing or decreasing concentrations.

The California Office of Environmental Health Hazard Assessment (OEHHA) establishes Acute Reference Exposure Levels (Acute RELs) for airborne compounds. The Acute REL for a compound is defined as the concentration level at or below which no adverse health effects are anticipated for 1 hour of exposure to the compound. The micro-GCs measure compounds hourly, which provides data that can be directly compared to Acute RELs. Of the compounds measured, Isopropyl Alcohol (IPA), 2-Butanone, Benzene, Toluene, Methanol, and m,p-Xylene have an OEHHA Acute REL. During the past quarter, the micro-GCs have not detected any of these compounds at or above their corresponding OEHHA Acute REL on a one-hour basis, with the exception of benzene at MS-01, MS-02, MS-04, MS-06, and MS-07. Exceedances throughout the reporting period are listed below.

- MS-01 exceeded the acute benzene REL on October 27, 2024 at 8:00 PM to 9:00 PM.
- MS-02 exceeded the acute benzene REL on October 28, 2024 at 4:00 AM to 5:00 AM.
- MS-04 exceeded the acute benzene REL on October 1, 2024 at 10:00 AM to 11:00 AM.
- MS-04 exceeded the acute benzene REL on October 4, 2024 at 9:00 PM to 10:00 PM.
- MS-04 exceeded the acute benzene REL on October 15, 2024 at 8:00 AM to 9:00 AM.
- MS-04 exceeded the acute benzene REL on October 28, 2024 at 12:00 AM to 1:00 AM.
- MS-04 exceeded the acute benzene REL on November 2, 2024 at 8:00 AM to 9:00 AM.
- MS-04 exceeded the acute benzene REL on November 5, 2024 at 8:00 AM to 9:00 AM.
- MS-04 exceeded the acute benzene REL on November 11, 2024 at 8:00 AM to 9:00 AM.
- MS-06 exceeded the acute benzene REL on October 28, 2024 at 4:00 AM to 5:00 AM.
- MS-07 exceeded the acute benzene REL on October 28, 2024 at 4:00 AM to 5:00 AM.

DISCRETE SAMPLING

During the fourth quarter of 2024, a total of 567 analytical samples were collected from the discrete sampling locations. The locations, as well as the number of samples collected at each location during the reporting period are presented in **Table 2** below.

*Note: Although the sampling strategy involves weekly sampling, accessibility issues impacted the total number of samples collected across various sampling locations.

VOC Data

During the reporting period, a total of 280 samples were analyzed for a total of 59 to 68 different individual VOCs. There were 32 individual VOCs detected in the 280 samples analyzed. This results in a total individual VOC detections of 453 out of 23,924 results analyzed.

TRS Data

During the reporting period, total sulfur compounds were detected in 3 samples. A summary of the TRS detections in the 3 samples is provided in **Table 3** (attached). Please note, the total TRS detections may differ from the total samples as some samples may contain multiple TRS detections.

Odor Data

In the fourth quarter of 2024, for on-site samples, the highest odors were detected from samples collected from the reaction area, with concentrations ranging from 5,000 to 19,999 ou/m^3.

In the fourth quarter of 2024, for off-site samples, the highest odors were detected from samples collected from samples taken from MS-08 and MS-09, with concentrations ranging from 625 to 3,536 ou/m^3.

TIME-COMPOSITE SAMPLING

During the fourth quarter of 2024, a total of 163, 24-hour time composite samples were collected from the 7 off-site monitoring stations, MS-06 through MS-12. Samples collected were analyzed using EPA Method TO-15 and SCAQMD Method 307.91. Sampling results are discussed below.

VOC Data

During the reporting period, a total of 80 samples were collected and analyzed for any of 58 different individual VOCs. Out of the 80 samples analyzed, 67 samples detected one or more VOCs. VOC analysis contains one fewer results from all 24-hr sampling. Fewer samples may be a result of accessibility issues along with an excluded samples using the QA/QC procedures included in the Standard Operating Procedures for the Enhanced Air Monitoring Program.

RAW DATA

In response to the DPH Response to the First Quarter 2024 Enhanced Air Monitoring Report issued on June 6, 2024; raw data from the Monthly EAMP Reports for the reporting period are now included in **Appendix A.**

CTEH SUPPLEMENTARY ANALYSIS

At the request of CCL, and in response to the DPH's June 6, 2024 letter, CTEH prepared a supplementary analysis for this report which can be found in **Appendix B.**

Subject: **Monthly Enhanced Air Monitoring Program Data, October 2024, Chiquita Canyon Landfill**

Dear Dr. Davis:

This submittal has been prepared for the Los Angeles County Department of Public Health (DPH), by **SCS Engineers** (SCS) on behalf of Chiquita Canyon, LLC (Chiquita) as part of the monthly reporting recommendation outlined in the August 15, 2023 letter from Chiquita to DPH (Workplan).

In accordance with the Workplan, SCS has prepared this submittal which contains analytical data from both weekly sampling as well as continuous monitoring data from two enhanced monitoring stations (MS-10 micro-GC and MS-12 micro-GC). A description of the data contained in the submittal is provided below.

Weekly Sampling Data

Weekly sampling data includes discrete grab samples at all 12 existing air monitoring stations (MS-01 through MS-12) (see **Figure 1**) for an expanded list of volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (EPA) Method 15 (TO-15), sulfur compounds via South Coast Air Quality Management District (SCAQMD) Method 307.91, and odor using a Scentroid SS400 Six Station Portable Olfactometer (SS400), which is a method compliant with E679-04. Results for the October 2024 weekly grab samples and odor samples are found in **Attachment A** and **Attachment B** respectively**.**

In addition, the weekly raw analytical data also includes 24-hour samples at each of the seven off-site monitoring station locations (MS-06 through MS-12). Samples are analyzed for the same constituents as the weekly grab sample analysis. Results for the October 24-hr samples are found in **Attachment C.**

Enhanced Continuous Monitoring Data

In August 2023, SCS installed continuous air monitoring modules at existing stations MS-04 and MS-12. The monitors analyze benzene, toluene, ethylbenzene, and total xylenes (BTEX) as well as total reduced sulfur (TRS). The intent of the new monitor module installation was to evaluate the data to determine whether these modules should be incorporated into the existing air monitoring stations on a permanent basis by comparing the data to laboratory data and trending the data to see how the real-time data correlates with the laboratory data from samples collected at the same time.

The BTEX and TRS units have since been removed from all stations, consistent with the Enhanced Air Monitoring Program Modification Workplan dated January 29, 2024 and submitted to DPH and SCAQMD.

In response to the modified Stipulated Oder for Abatement (SOFA) issued by SCAQMD on January 17, 2024, two micro-GC units were installed at MS-10 and MS-12 by the May 1, 2024 deadline. The continuous air monitoring results are hosted online through the Chiquita Canyon website. As of September 2024, eight micro-GC were brought online as part of an expansion of the Enhanced Air Monitoring Program. A link to the real time, continuous data is found below:

https://chiquitacanyon.com/reports/community-air-monitoring-program/

Subject: **Monthly Enhanced Air Monitoring Program Data, November 2024, Chiquita Canyon Landfill**

Dear Dr. Davis:

This submittal has been prepared for the Los Angeles County Department of Public Health (DPH), by **SCS Engineers** (SCS) on behalf of Chiquita Canyon, LLC (Chiquita) as part of the monthly reporting recommendation outlined in the August 15, 2023 letter from Chiquita to DPH (Workplan).

In accordance with the Workplan, SCS has prepared this submittal which contains analytical data from both weekly sampling as well as continuous monitoring data from two enhanced monitoring stations (MS-10 micro-GC and MS-12 micro-GC). A description of the data contained in the submittal is provided below.

Weekly Sampling Data

Weekly sampling data includes discrete grab samples at all 12 existing air monitoring stations (MS-01 through MS-12) (see **Figure 1**) for an expanded list of volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (EPA) Method 15 (TO-15), sulfur compounds via South Coast Air Quality Management District (SCAQMD) Method 307.91, and odor using a Scentroid SS400 Six Station Portable Olfactometer (SS400), which is a method compliant with E679-04. Results for the October 2024 weekly grab samples and odor samples are found in **Attachment A** and **Attachment B** respectively.

In addition, the weekly raw analytical data also includes 24-hour samples at each of the seven off-site monitoring station locations (MS-06 through MS-12). Samples are analyzed for the same constituents as the weekly grab sample analysis. Results for the November 24-hr samples are found in **Attachment C.**

Enhanced Continuous Monitoring Data

In August 2023, SCS installed continuous air monitoring modules at existing stations MS-04 and MS-12. The monitors analyze benzene, toluene, ethylbenzene, and total xylenes (BTEX) as well as total reduced sulfur (TRS). The intent of the new monitor module installation was to evaluate the data to determine whether these modules should be incorporated into the existing air monitoring stations on a permanent basis by comparing the data to laboratory data and trending the data to see how the real-time data correlates with the laboratory data from samples collected at the same time.

The BTEX and TRS units have since been removed from all stations, consistent with the Enhanced Air Monitoring Program Modification Workplan dated January 29, 2024 and submitted to DPH and SCAQMD.

In response to the modified Stipulated Oder for Abatement (SOFA) issued by SCAQMD on January 17, 2024, two micro-GC units were installed at MS-10 and MS-12 by the May 1, 2024 deadline. The continuous air monitoring results are hosted online through the Chiquita Canyon website. As of September 2024, eight micro-GC were brought online as part of an expansion of the Enhanced Air Monitoring Program. A link to the real time, continuous data is found below:

Subject: **Monthly Enhanced Air Monitoring Program Data, December 2024, Chiquita Canyon Landfill**

Dear Dr. Davis:

This submittal has been prepared for the Los Angeles County Department of Public Health (DPH), by **SCS Engineers** (SCS) on behalf of Chiquita Canyon, LLC (Chiquita) as part of the monthly reporting recommendation outlined in the August 15, 2023 letter from Chiquita to DPH (Workplan).

In accordance with the Workplan, SCS has prepared this submittal which contains analytical data from both weekly sampling as well as continuous monitoring data from two enhanced monitoring stations (MS-10 micro-GC and MS-12 micro-GC). A description of the data contained in the submittal is provided below.

Weekly Sampling Data

Weekly sampling data includes discrete grab samples at all 12 existing air monitoring stations (MS-01 through MS-12) (see **Figure 1**) for an expanded list of volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (EPA) Method 15 (TO-15), sulfur compounds via South Coast Air Quality Management District (SCAQMD) Method 307.91, and odor using a Scentroid SS400 Six Station Portable Olfactometer (SS400), which is a method compliant with E679-04. Results for the October 2024 weekly grab samples and odor samples are found in **Attachment A** and **Attachment B** respectively.

In addition, the weekly raw analytical data also includes 24-hour samples at each of the seven off-site monitoring station locations (MS-06 through MS-12). Samples are analyzed for the same constituents as the weekly grab sample analysis. Results for the November 24-hr samples are found in **Attachment C.**

Enhanced Continuous Monitoring Data

In August 2023, SCS installed continuous air monitoring modules at existing stations MS-04 and MS-12. The monitors analyze benzene, toluene, ethylbenzene, and total xylenes (BTEX) as well as total reduced sulfur (TRS). The intent of the new monitor module installation was to evaluate the data to determine whether these modules should be incorporated into the existing air monitoring stations on a permanent basis by comparing the data to laboratory data and trending the data to see how the real-time data correlates with the laboratory data from samples collected at the same time.

The BTEX and TRS units have since been removed from all stations, consistent with the Enhanced Air Monitoring Program Modification Workplan dated January 29, 2024 and submitted to DPH and SCAQMD.

In response to the modified Stipulated Oder for Abatement (SOFA) issued by SCAQMD on January 17, 2024, two micro-GC units were installed at MS-10 and MS-12 by the May 1, 2024 deadline. The continuous air monitoring results are hosted online through the Chiquita Canyon website. As of September 2024, eight micro-GC were brought online as part of an expansion of the Enhanced Air Monitoring Program. A link to the real time, continuous data is found below:

RL - Reporting Limit

U - Compound was not detected at or above the Sample RL.

Note: DMS co-elutes with Ethanol, high EtOH concentrations can interfere with TIC search and quantitation.

J - Estimated result between the Method Detection Limit (MDL) and the Reporting Limit (RL).

MDL for Dimethyl Sulfide is 0.24 ppb (v/v).

E - Estimated value above the calibration range.

RL - Reporting Limit

U - Compound was not detected at or above the Sample RL.

Note: DMS co-elutes with Ethanol, high EtOH concentrations can interfere with TIC search and quantitation.

J - Estimated result between the Method Detection Limit (MDL) and the Reporting Limit (RL).

MDL for Dimethyl Sulfide is 0.24 ppb (v/v).

E - Estimated value above the calibration range.

CTEH Supplementary Analysis of SCS Engineers' Q4 2024 EAMP Report

CTEH®

Date: February 14, 2025
To: Nicole Quick, MD, MPH, Deputy Director for Health Protection, Los Angeles County Department of Public Health
From: Pablo Sanchez Soria, PhD, CIH, Senior Toxicologist, Director of Health Sciences, CTEH
Subject: CTEH Supplementary Analysis of SCS Engineers' Fourth Quarter (October 1, 2024 – December 31, 2024) Community 24-hour Analytical Air Sampling Data

1. Overview and Summary of Findings

In accordance with the enhanced air monitoring program (EAMP) for Chiquita Canyon Landfill (CCL), SCS Engineers produced a quarterly report for the fourth quarter of 2024 (October 1, 2024, to December 31, 2024), summarizing the results from air quality data collected in accordance with the 2019 Community Air Monitoring Plan (CAMP) prepared by SCS Engineers in collaboration with CCL, the Los Angeles County Department of Public Health (DPH), and the Los Angeles County Department of Public Works (DPW). At the request of CCL, and in response to DPH's June 6, 2024, letter (Letter), CTEH has prepared this report to provide a supplementary analysis of SCS Engineers' analytical air sampling data pertaining to the evaluation of public health risks.

The following summarizes CTEH's findings from 24-hour "*time-composited*" air samples collected by SCS Engineers across the community near CCL during the fourth quarter of 2024 and provides a summary of the methodology used to conduct the analysis.

SCS Engineers collected air samples for the analysis of volatile organic compounds (VOCs) and total reduced sulfur (TRS) compounds. Full laboratory results are provided in SCS Engineers quarterly report. Of all the analytes evaluated in the 24-hour samples deployed across seven community locations (MS-06 – MS-12), none of the samples had detectable levels of any analyte above corresponding Office of Environmental Health Hazard Assessment (OEHHA) Chronic Reference Exposure Levels (RELs). Consequently, there were no documented exceedances of OEHHA Chronic RELs.

Similarly, no detections above Acute RELs were observed across SCS Engineers' 24-hour analytical air samples collected throughout the fourth quarter of 2024.

2. Data Evaluation and Methodology

Data Selection for Health-Based Screening Level Assessment

Community Data

SCS Engineers' fourth quarterly report of 2024 includes data collected from multiple locations, including locations within the landfill, across the perimeter of CCL, and throughout the community. To evaluate potential health risks for residents near the CCL, concentrations of VOCs and TRS compounds were evaluated throughout the community air sampling locations, including MS-06 – MS-12. For this reason, all data from MS-01 – MS-05, located within the landfill or on the landfill's immediate perimeter, were excluded from this analysis. A figure illustrating these sampling locations is provided in **Appendix A**.

24-hour Analytical Data

While community locations selected by SCS Engineers for air monitoring and sampling also include three additional locations beyond MS-06 – MS-12 (S. End Lincoln, Santa Clarita Valley (SCV) and Chiquito Canyon Road), none of these locations included samples collected over a 24-hour period. In this regard, all data from grab samples were excluded from this analysis. Additionally, while SCS Engineers is also collecting air quality data via continuous air monitoring stations across various perimeter and community locations, CTEH has not evaluated these data to make conclusions about public health risks because CTEH is not familiar with the quality assurance and quality control procedures in place for these data.

OEHHA RELs

Analytical results from SCS Engineers' 24-hour samples were compared to OEHHA Chronic RELs, where available. A list of RELs is available on OEHHA's website[1]. These RELs serve as health-protective benchmarks for chronic exposures (chronic being for a period of 1-year to a lifetime), and they are based on the most sensitive health effects reported in scientific literature. OEHHA RELs are designed to protect the most sensitive individuals in the population, including children, the elderly, and those with pre-existing health conditions. OEHHA RELs are airborne concentrations of chemicals at or below which no adverse health effects are anticipated in individuals indefinitely exposed to that level. Due to the conservative nature of health-protective screening levels such as these, it is important to note that exceedances of chronic RELs from single 24-hour sample results do not necessarily indicate that health risks are anticipated. Rather, they may indicate that additional investigation is warranted.

Analysis

To assess whether exceedances of OEHHA Chronic RELs were observed, results were averaged throughout the quarter by sampling location[2]. In addition, individual results from single 24-hour samples were compared against OEHHA Chronic RELs screening values[3] to assess whether additional investigation may be warranted. (i.e., assess trends, wind direction, or other patterns informative of potential sources). The individual 24-hour sampling results may be reported as above or below OEHHA Chronic RELs, rather than "exceedance" or "non-exceedance" because individual 24-hour samples do not indicate the potential

[2] Average concentrations include non-detections at one half of the reporting limit, per standard risk assessment practice.
[3] Individual 24-hour samples were also compared against OEHHA Acute RELs for sake of completeness. No detections above Acute RELs were observed.

health risks for which Chronic RELs are protective over *chronic* exposure durations. No detections above the OEHHA Chronic REL were observed, as discussed in Section 1, above. Individual 24-hour samples were also compared against OEHHA Acute RELs. No detections above Acute RELs were observed across SCS Engineers' 24-hour analytical air samples collected throughout the fourth quarter of 2024.
