Baldwin Park, California 91706

Subject: **June 2025 Monthly Report Pursuant to Milestones 1A-3 and 5 of the LEA June 6, 2024 Compliance Order and July 30, 2024 Letter, Chiquita Canyon Landfill, Castaic, California**

Dear Ms. Gork:

SCS Engineers (SCS), on behalf of Chiquita Canyon, LLC (Chiquita), hereby provides the Los Angeles County Department of Public Health, Solid Waste Management Program, acting as the Local Enforcement Agency (LEA) with a monthly report pursuant to Milestones 1A-3 and 5 of the LEA Compliance Order dated June 6, 2024 (Compliance Order) and subsequent related correspondence received from the LEA. This report covers the monthly period for June 2025.

Chiquita Canyon Landfill (CCL or Landfill) is a landfill/solid waste disposal facility located at 29201 Henry Mayo Drive in Castaic, California. In connection with the Landfill, Chiquita operates a landfill gas collection and control system. SCS prepared and submitted the Carbon Monoxide and Hydrogen Reading Summary Report (Summary Report) to the LEA on June 6, 2024, on behalf of Chiquita, in response to the directives in the LEA letters dated April 5, 2024 and May 28, 2024 regarding collection of landfill gas data and in accordance with Milestone 1A-2 of the Compliance Order. The LEA, in collaboration with the California Department of Resources, Recycling, and Recovery (CalRecycle), reviewed the Summary Report and determined that it complied with Milestone 1A-2. The LEA set forth several new requirements for Chiquita to comply with Milestone 1A-3 in follow-up correspondence dated July 30, 2024.

This report was prepared in accordance with Milestones 1A-3 and 5 of the Compliance Order, the LEA's follow-up correspondence dated July 30, 2024, Chiquita's letter dated September 3, 2024, the September 12, 2024 meeting with the LEA, and follow-up correspondence from the LEA dated November 19 and 27 and December 3, 2024.

Please note that on June 26, 2025, Chiquita personnel were evacuated from the Landfill due to the Jasper Fire, which started on the west side of Chiquito Canyon Road in Val Verde, California, and expanded onto the site, causing power loss to the west side of the Landfill. Chiquita provided a notification to the LEA that same day and will be submitting a follow-up

notification regarding any impacts to obligations under the LEA's June 6, 2024 or May 1, 2025 Compliance Orders.

Milestone 1A-3 Compliance Items

1. Submit the laboratory test results for monthly sampling of carbon monoxide (CO) and hydrogen (H2) from a set of landfill gas (LFG) wells selected by the LEA. Please see Table 1, columns labeled "CO" and "H2."

Results for wells monitored are shown in **Attachment A.**[1] The data is being submitted to the LEA in a standalone report signed by a licensed engineer, in accordance with Milestone 1A-3 of the Compliance Order. As noted in Chiquita's prior correspondence and monthly reports, this report does not include data from wells CV-100, CV-1420, CV-1532, CV-2202, H-1774S, TC-2385A, and TC-2385S, as those wells have been abandoned, or from well CV-2332, as that well was never installed. All remaining wells were tested during the month of June 2025.

As discussed during the September 12, 2024 meeting, and as previously reported, graphics showing CO and H2 trends are provided in **Attachment D** and are discussed further below.

2. Provide data from readings for fixed gases (CH4, O2, and CO2) from a set of LFG wells selected by the LEA. See Table 1, column labeled "Fixed Gas CH4, O2, CO2."

The results for wells monitored are provided in **Attachment A.**

3. Collect down well temperatures at 34 wells to confirm the gas wellhead temperature readings per the requirement of the New Source Performance Standards (NSPS). See Table 1, column labeled "Down Well Temp Monitoring."

It is Chiquita's understanding from the LEA's November 27, 2024 correspondence, and as noted in prior monthly reports, that, at this time, Chiquita is only required to sample the wells at the annual frequency provided in the NSPS protocols, but that the LEA may require more frequent monitoring for up to ten (10) wells selected by the LEA. Chiquita is awaiting the LEA's selection of those wells.

Chiquita nevertheless provides in **Attachment B** the down-hole temperature graphs[2] concerning the following wells from fixed locations which contain the Lorentz Pumping System with integral temperature sensors: CV-2302, CV-2303, CV-2315, CV-2350, CV-2351, CV-2352 CV-24017, CV-24065 and CV-24095.

[1] The lab(s) reported data from additional LFG wells outside of those selected for sampling by the LEA; the additional data is related to separate South Coast Air Quality Management District (South Coast AQMD) reporting requirements and therefore can be disregarded for purposes of this report.
[2] Each graph notes a single temperature data point due to changes in the software.

Please note that the Lorentz temperature monitoring system for the pumps in CV-2301, CV-2302 (offline since 6-24), CV-2303 (offline since 6-7), CV-2351, CV-2352 (offline since 6-18) and CV-24095 (offline since 6-4) are currently offline and are in the process of being repaired (See attachment B Monitoring List for additional details on repairs).

As previously noted, SCS will continue to collect down-hole temperatures for wells on an annual basis and will report the results as the data is obtained at each location. On June 2, 2025, SCS performed down-hole temperature monitoring at CV-2002 for the 2025 annual monitoring: (*see* **Attachment B**). SCS has completed annual 2025 downhole temperature monitoring at all locations requested as of June 2, 2025.

4. Sample the selected 40 wells for VOCs by method TO-15. See Table 1, column labeled "VOC (TO-15)."

The results for wells monitored are provided in **Attachment A**.[3]

5. Continue to sample and monitor 6 horizontal wells as indicated in Attachment 1, well numbers highlighted in yellow. At this time, 42 horizontal wells may be released from continued sampling, however, wells may be included later depending on future data submissions. See Table 1, well numbers highlighted in blue.

As noted in the September 3 letter and reported in prior monthly reports, two (2) of the six (6) horizontal wells (H-1774S and H-1560S) were abandoned when the new vertical extraction wells were installed, and thus data from those wells are not included. Data from the four (4) other horizontal wells are in **Attachment A**.

6. Add 20 vertical wells to the monthly wellhead temperature and LFG sampling protocols. See Table 1 well numbers highlighted in green.

As conveyed by the LEA during our September 12, 2024 meeting, and restated in our prior monthly reports, we understand the LEA is requiring laboratory analytical data for fixed gases, CO, and H2, as well as field data. Laboratory results are in **Attachment A**. Field data with wellhead gas temperatures are shown on Table 2 in **Attachment A**.

We understand from the LEA's November 27, 2024 correspondence that laboratory analytical data will be required for the specified fixed gases.

Note that following wells were again not sampled in June 2025, for the following reasons noted in prior monthly reports:

CV-1420 – Abandoned during 2024 GCCS Expansion due to declining gas flows.
CV-2202 – Abandoned during 2024 GCCS Expansion due to declining gas flows.

[3] Well CV-24142 is listed twice in Table 1 of the LEA's July 30 letter – one requires VOC sampling, and the other does not. Chiquita sampled this well for VOCs.

CV-2332 – This well does not exist. This well was proposed for installation in Fall 2023, but other wells were installed in the area in lieu of CV-2332 when the number of wells increased pursuant to the Stipulated Order for Abatement (Stipulated Order) with the South Coast AQMD.

7. Plot to show the locations of the following 19 wells on the site map titled "Existing GCCS Map – LFG Vertical Extraction Wells" dated 06/06/2024: CV-24002, CV-24003, CV-24007, CV-24017, CV-24053, CV-24055, CV-24065, CV-24071, CV-24075, CV-24077, CV-24079, CV-24082, CV-24083, CV-24088, CV-24095, CV-24096, CV-24097, CV-24098 and H-1403W. For well H-1403W, provide the horizontal location of piping and an estimate where the high temperature (195°F) is most likely occurring. See Table 1, well numbers highlighted in red and H-1403W (highlighted in yellow).

The locations of the above-identified wells are shown on the Map in **Attachment C**.[4]

8. Include in the monthly report, a settlement/heat map as shown below, beginning with the earliest heat map data available for each month to present. The topographic maps should show 2-foot contour intervals if possible.

The LEA clarified in its correspondence dated November 27 and December 3, 2024 that in lieu of this request, Chiquita could submit quarterly maps together with its monthly fissures and tension cracks summaries, which are submitted on the second Tuesday of each month. The LEA directed Chiquita on June 2, 2025 to instead submit the isopach map on a monthly basis. For ease of reference, we are submitting as **Attachment F** a copy of the most recent isopach map submitted on July 8, 2025.

9. Provide the sampling results in a standalone report with the appropriate discussion, tables, QA/QC, methods and signed by a registered professional, etc., as described in the Compliance Order Milestone 1A-2 and 1A-3.

CCL has provided the above-requested information and the raw data in **Attachment A**, as well as a figure with the data-driven reaction area which incorporates settlement data (see **Attachment F**). Temperature graphs are provided for wells with Lorentz pumps (9 locations).

On June 2, 2025 the final remaining annual downhole temperature monitoring was performed at LFG extraction well CV-2002; no more annual monitoring is expected for 2025,.

Please note that in addition to the wells listed in response to request dated July 30, 2024 in Table 1 that could not be tested, the following wells that only required analytical data could also not be tested, as previously reported, because they were abandoned during the 2024 GCCS expansion due to declining gas flows in accordance with the requirements of the NSPS:

[4] The LEA acknowledged in its November 20, 2024 correspondence that a high temperature is not occurring in well H-1403W. We therefore did not map the maximum temperature at well H-1403W.

CV-100, CV-1532, H-1560S, H-1774S, TC-2385A, TC-2385S, CV-2202, and CV-1420. Finally, as also previously reported, CV-2332 was never installed.

Sampling Procedures

Gas samples were collected using Tedlar/Mylar bags, as described in Chiquita's September 3, 2024 letter and the prior monthly reports, and then delivered to certified laboratories for testing. All permanent gas (CH4, CO2, O2, N2, CO, and H2) data were analyzed within the requested 24 hours of sampling. SCS continues to believe that use of the EPA-approved 72-hour holding time for these samples would be appropriate and accurate. Nevertheless, in response to the LEA's March 17, 2025 correspondence, SCS will continue to request 24-hour holding times for all fixed gases, including CO, H2, and VOCs, collected using Mylar or Tedlar bags. However, if additional sampling is required or if the laboratories have a change in workload, this holding time may change, in which case the LEA will be notified accordingly. During June 2025, all wells were tested for VOC's (EPA method TO-15) and permanent gases (EPA methods 1946 and Alt-144) within 24 hours by providing the laboratory with duplicate bag samples as needed for VOC testing.

Additional gas and pressure data were collected using either an Envision Irwin Gas Meter or Landtec GEM 5000 Gas monitoring device. These instruments measure combustible gas concentrations in air directly on either of two scales, the first as a percent by volume of the lower explosive limit (LEL) of methane gas in air (0 to 5 percent) and the other as a percent by volume (0 to 100 percent) in the gas sampled. The detection limit for these instruments is approximately 0.10 percent by volume.

Gas monitoring testing procedures were as follows:

- Connect sample tubing, open test valve, observe pressure, and record data.
- Turn on sample pump, purge a minimum of one probe volume, and observe and record methane, oxygen, and carbon dioxide gas concentrations when readings have stabilized.
- Close test valve, disconnect sample instruments, and secure sample location.

Milestone 1A-3 Conclusions

June 2025 was the eleventh monitoring performed pursuant to Milestone 1A-3 of the Compliance Order. The data collected in June 2025 and evaluated for this report are consistent with the data collected in the previous months of August 2024 through May 2025 as well as the data collected and evaluated by the Reaction Committee established under the supervision of the South Coast Air Quality Management District (SCAQMD) and in accordance with the Stipulated Order to assess the reaction area, including the June 2025 data most recently evaluated by the Reaction Committee on July 10, 2025, as required by Condition 9(b) of the Stipulated Order. *See* **Attachment E**.

For the reasons described in the attached July 10, 2025 Reaction Committee report, the alignment of the estimated extent of the elevated temperature landfill (ETLF) conditions exhibited at the Landfill (referred to as the "Reaction Area" limits) and identified in that report remains the same as that identified in the Reaction Committee's June 2025 report. The Reaction Committee determined that no adjustments were warranted and that ETLF conditions had not expanded. There was no evidence of reaction conditions or reaction gas present outside of the currently delineated reaction area boundary.

As liquid levels continue to change due to the installation of additional Lorentz Electric and Pneumatic Pumps, we continue to see the anticipated changes in percentages of Permanent Gases, Carbon Monoxide, and Hydrogen and changes to temperatures as more gas is able to move towards and to be removed by the extraction wells as the levels of liquid decline. This continues to be demonstrated by the multiscale well graphics included in **Attachment D**, which includes graphics on permanent gases, temperature, and other trends over a six (6)-month period. Note that these graphs were created using standard landfill gas monitoring equipment and the results do not contain laboratory data. SCS has also included separate Hydrogen and Carbon Monoxide graphs using laboratory results for your use and review for each well.

Additionally, the installation of larger diameter piping has improved the collection of additional gases throughout the Landfill. Since March 2025, the flow rates of landfill gas being combusted by the abatement devices have increased from 13,500 cfm to 15,150 cfm. Please note that during June 2025, the overall gas extraction from the Landfill was approximately 654,307,000 cubic feet. This extraction rate and anticipated future increases as the collection systems continue to expand, are expected to improve the gas composition of the wells in the reaction area as more vacuum and resulting movement of gas allows more reaction and normal landfill gas to be extracted.

Chiquita will continue to evaluate the data in future monthly reports as additional data is collected.

Milestone 5 Compliance Items

This report includes in **Attachment D** individual maps overlayed with the following data for June 2025 in an easily understood format, in accordance with Milestone 5 of the Compliance Order:

- Defined reaction area;
- Expansion of reaction area, if any;
- Weekly TMP data; and
- LFG data including, but not limited to, CH4, CO2, O2, Temperature, CO, and H2 data.

Milestone 5 also requires "settlement with heat maps," but as discussed earlier in this report and in accordance with LEA correspondence dated November 27 and December 3, 2024, this requirement is satisfied by Chiquita's submittal of its June 2025 isopach map to the LEA on July 8, 2025. For the LEA's convenience, this map is included again herein as **Attachment F**.

The signatories below are a licensed professional and a Regional Manager VP of SCS Engineers.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S060206-01/15

Enclosed are the results for sample(s) received 6/2/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride and 1,2,4-trichlorobenzene.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating possible high bias. Results above the reporting limit were flagged with the Q qualifier.
- Bromoform exhibited low recovery in the initial calibration verification indicating possible low bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 6/10/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S060301-01/10

Enclosed are the results for sample(s) received 6/3/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride and 1,2,4-trichlorobenzene.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating possible high bias. Results above the reporting limit were flagged with the Q qualifier.
- Bromoform exhibited low recovery in the initial calibration verification indicating possible low bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 6/12/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S060403-01/10

Enclosed are the results for sample(s) received 6/4/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride and 1,2,4-trichlorobenzene.
- Bromoform exhibited low recovery in the initial calibration verification indicating a possible low bias. Results are flagged with the Q qualifier.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Detected results are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim Art Jones, and Ali Ferrara on 6/16/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S060504-01/10

Enclosed are the results for sample(s) received 6/5/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride and 1,2,4-trichlorobenzene.
- Bromoform exhibited low recovery in the initial calibration verification indicating a possible low bias. Results are flagged with the Q qualifier.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Detected results are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 6/17/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S061001-01/10

Enclosed are the results for sample(s) received 6/10/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride, and 1,2,4-trichlorobenzene.
- Bromoform exhibited low recovery in the initial calibration verification indicating low bias. Results were flagged with the Q qualifier.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating high bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 6/20/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S061101-01/10

Enclosed are the results for sample(s) received 6/11/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride, and 1,2,4-trichlorobenzene.
- Bromoform exhibited low recovery in the initial calibration verification indicating low bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 6/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S061207-01/06

Enclosed are the results for sample(s) received 6/12/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for vinyl acetate, benzyl chloride, and 1,2,4-trichlorobenzene.
- Bromoform exhibited low recovery in the initial calibration verification indicating low bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 6/24/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

Temperatures

LEA Selected Wells for Down Hole Temperature Monitoring
June 2025

Well Number	Down Well Temp Monitoring (Annually)	Date Monitored for Annual Downwell temperatures	Comments
CV-100	NA	NA	Abandoned Well
CV-103	Yes	3/3/2025	
CV-108-52	Yes	3/4/2025	
CV-113	Yes	3/10/2025	
CV-1532	NA	NA	Abandoned Well
CV-1532A	Yes	3/10/2025	
CV-1535	Yes	3/4/2025	
CV-1902A	Yes	3/18/2025	
CV-2001	Yes	3/4/2025	
CV-2002	Yes	6/2/2025	
CV-2007	Yes	3/5/2025	
CV-2202	NA	NA	Abandoned Well
CV-2301	Yes	3/11/2025	Pump offline - equipment is damaged in the well casing. No timeline on repairs due to safety at this time.
CV-2302	Yes	3/11/2025	graph attached - Data available for 6-1 to 6-24. OFF line due to additional liner deployment. Will return to operation upon completion of work
CV-2303	Yes	3/11/2025	graph attached 6-1 to 6-7.Pump was removed and will remain off line until new tank farm in Cell 8B is active.
CV-2312	Yes	3/5/2025	
CV-2315	Yes	3/19/2025	graph attached 6-7 to 6-30
CV-2341	Yes	3/5/2025	
CV-2350	Yes	3/12/2025	Graph Attached 6-3 to 6-30
CV-2351	Yes	3/12/2025	graph attached - sensor offline. Pump has been replaced and should be activated before July 31
CV-2352	Yes	3/12/2025	Graph attached On line from 6-1 to 6-18. Pump sensor has failed and will remain off line until New Cell 8B tank farm is active
CV-2353	Yes	5/30/2025	
CV-24007	Yes	3/6/2025	
CV-24017	Yes	3/6/2025	graph attached
CV-24053	Yes	3/6/2025	
CV-24065	Yes	3/6/2025	graph attached
CV-24095	Yes	3/7/2025	Location on line 6-2 to 6-4 - graph attached. Pump was removed and will remain off line until new tank farm in Cell 8B is active.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 4/24/2025 to 6/4/2025

From May 29, 2025, through June 4, 2025, there were three recorded temperature increases, and two temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-09
  - As stated in previous weeks' reports, prior weeks of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery was installed on May 23rd ahead of schedule and TP-09 is now online and recording data. There have been no significant temperature changes since TP-09 went offline.

- TP-11
  - The 15-foot thermocouple showed a decrease in maximum temperature of 12°F from 150°F to 138°F from May 29th to June 3rd.
  - The 30-foot thermocouple showed an increase in maximum temperature of 16°F from 148°F to 164°F from May 27th to June 3rd.

- TP-14
  - The 15-foot thermocouple remained consistent with previous recorded temperatures.

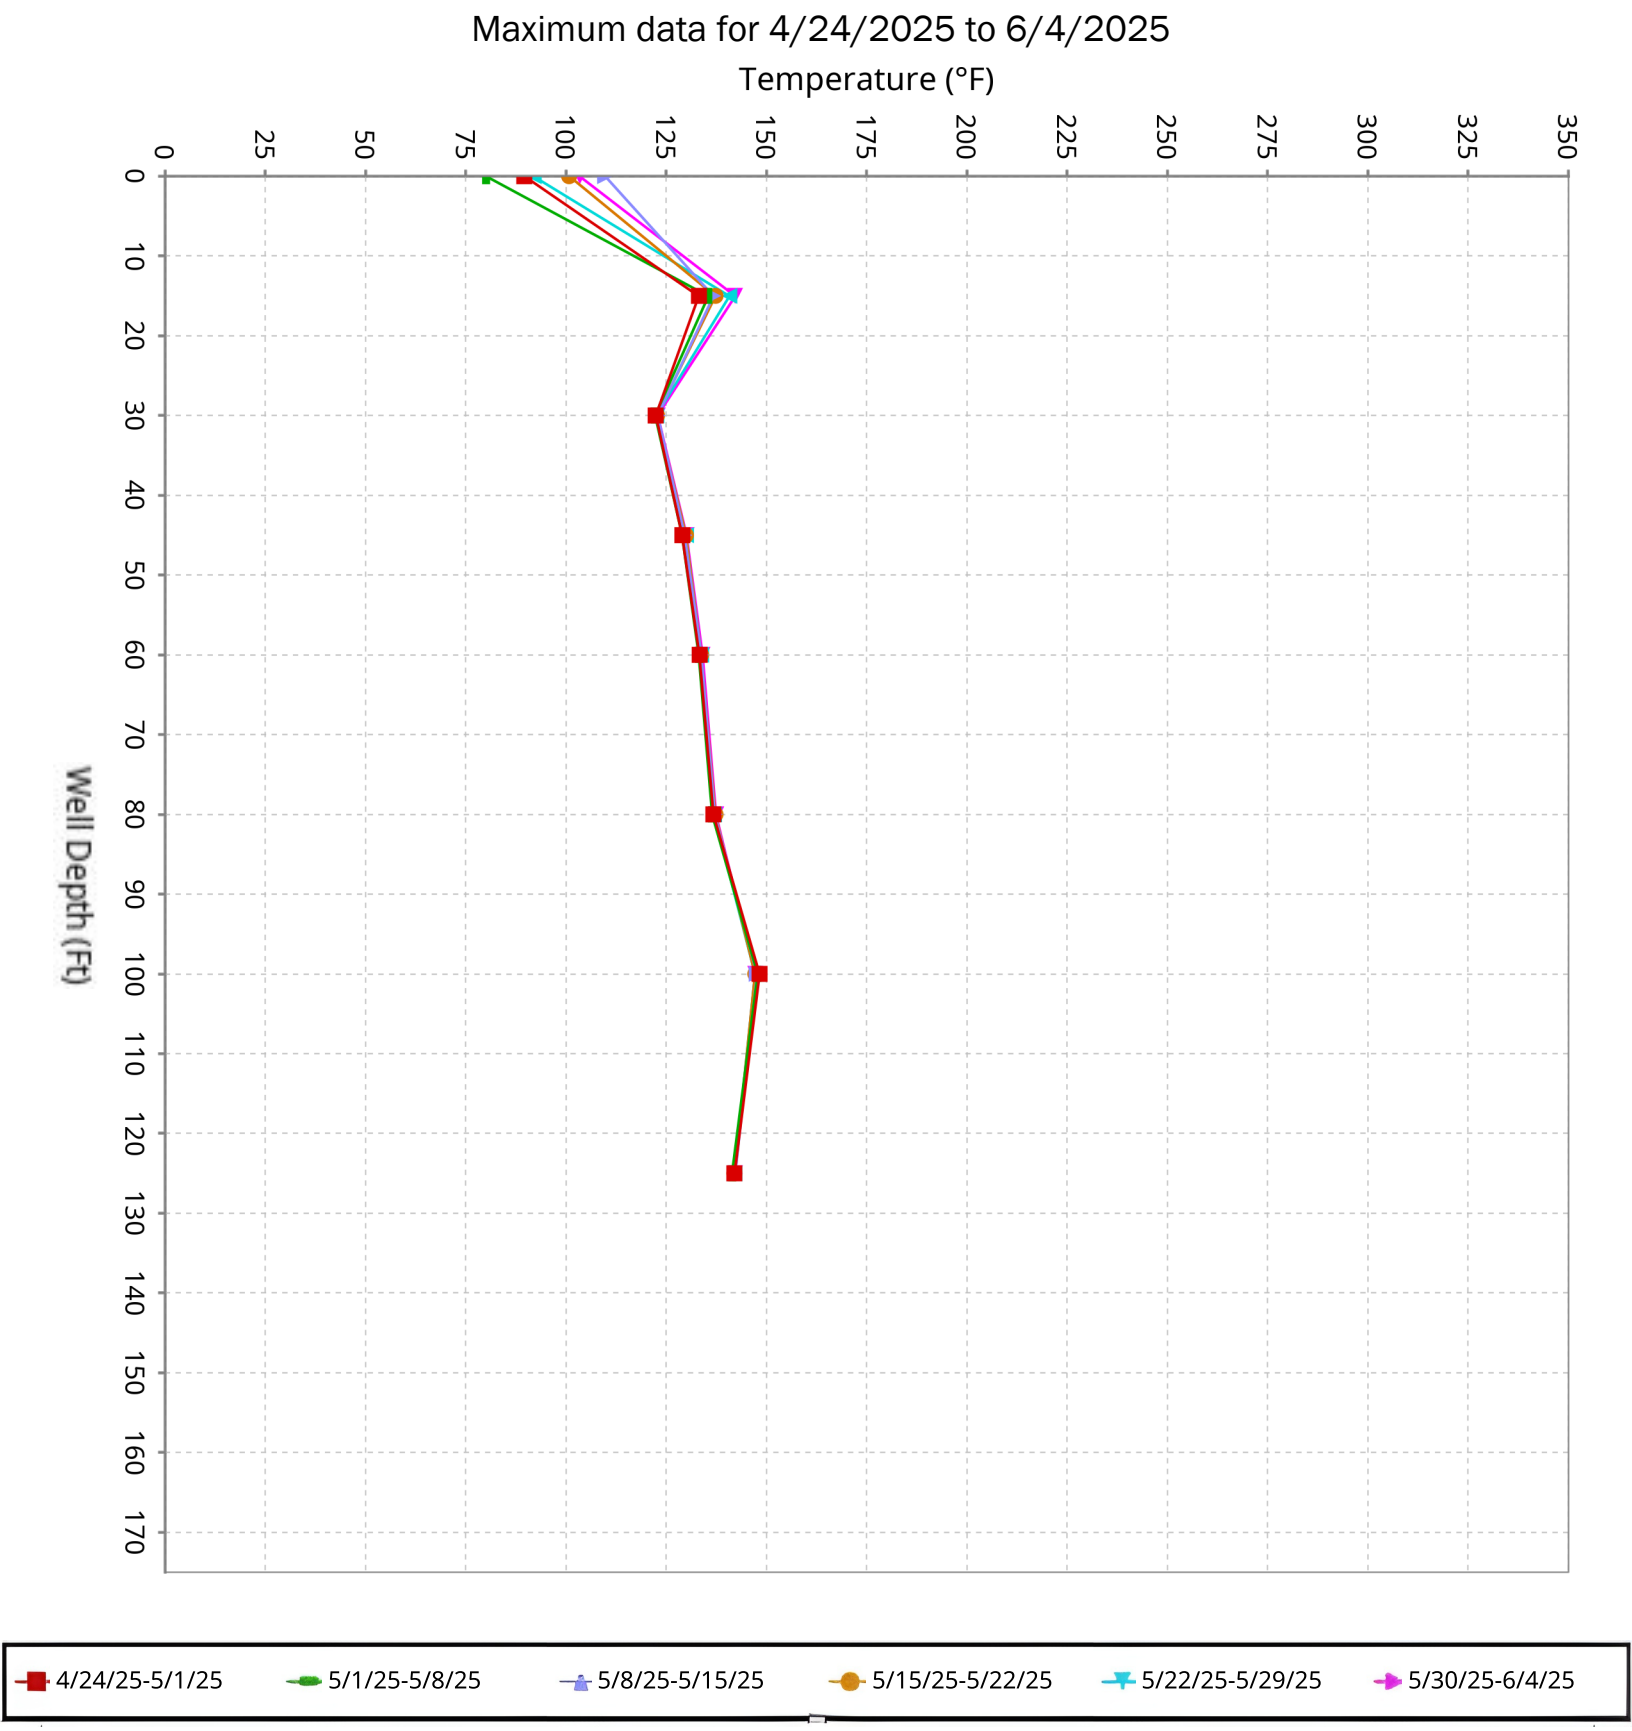

- TP-21
  - The 45-foot thermocouple showed an increase in maximum temperature of 12°F from 158°F to 170°F from May 28th to June 2nd.
  - The 60-foot thermocouple showed an increase in maximum temperature of 20°F from 178°F to 198°F from May 26th to May 31st.
  - The 95-foot thermocouple showed a decrease in maximum temperature of 16°F from 227°F to 211°F from May 26th to June 2nd.

SCALE: AS SHOWN

SHEET: 1

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 5/1/2025 to 6/11/2025

From June 5, 2025, through June 11, 2025, there was one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-09
  - As stated in previous weeks' reports, prior weeks of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery was installed on May 23rd ahead of schedule and TP-09 is now online and recording data. There have been no significant temperature changes since TP-09 went offline.

- TP-11
  - The 15-foot thermocouple showed an increase in maximum temperature of 14°F from 138°F to 152°F from June 3rd to June 10th.
  - The 45-foot thermocouple remained consistent with previous recorded temperatures.

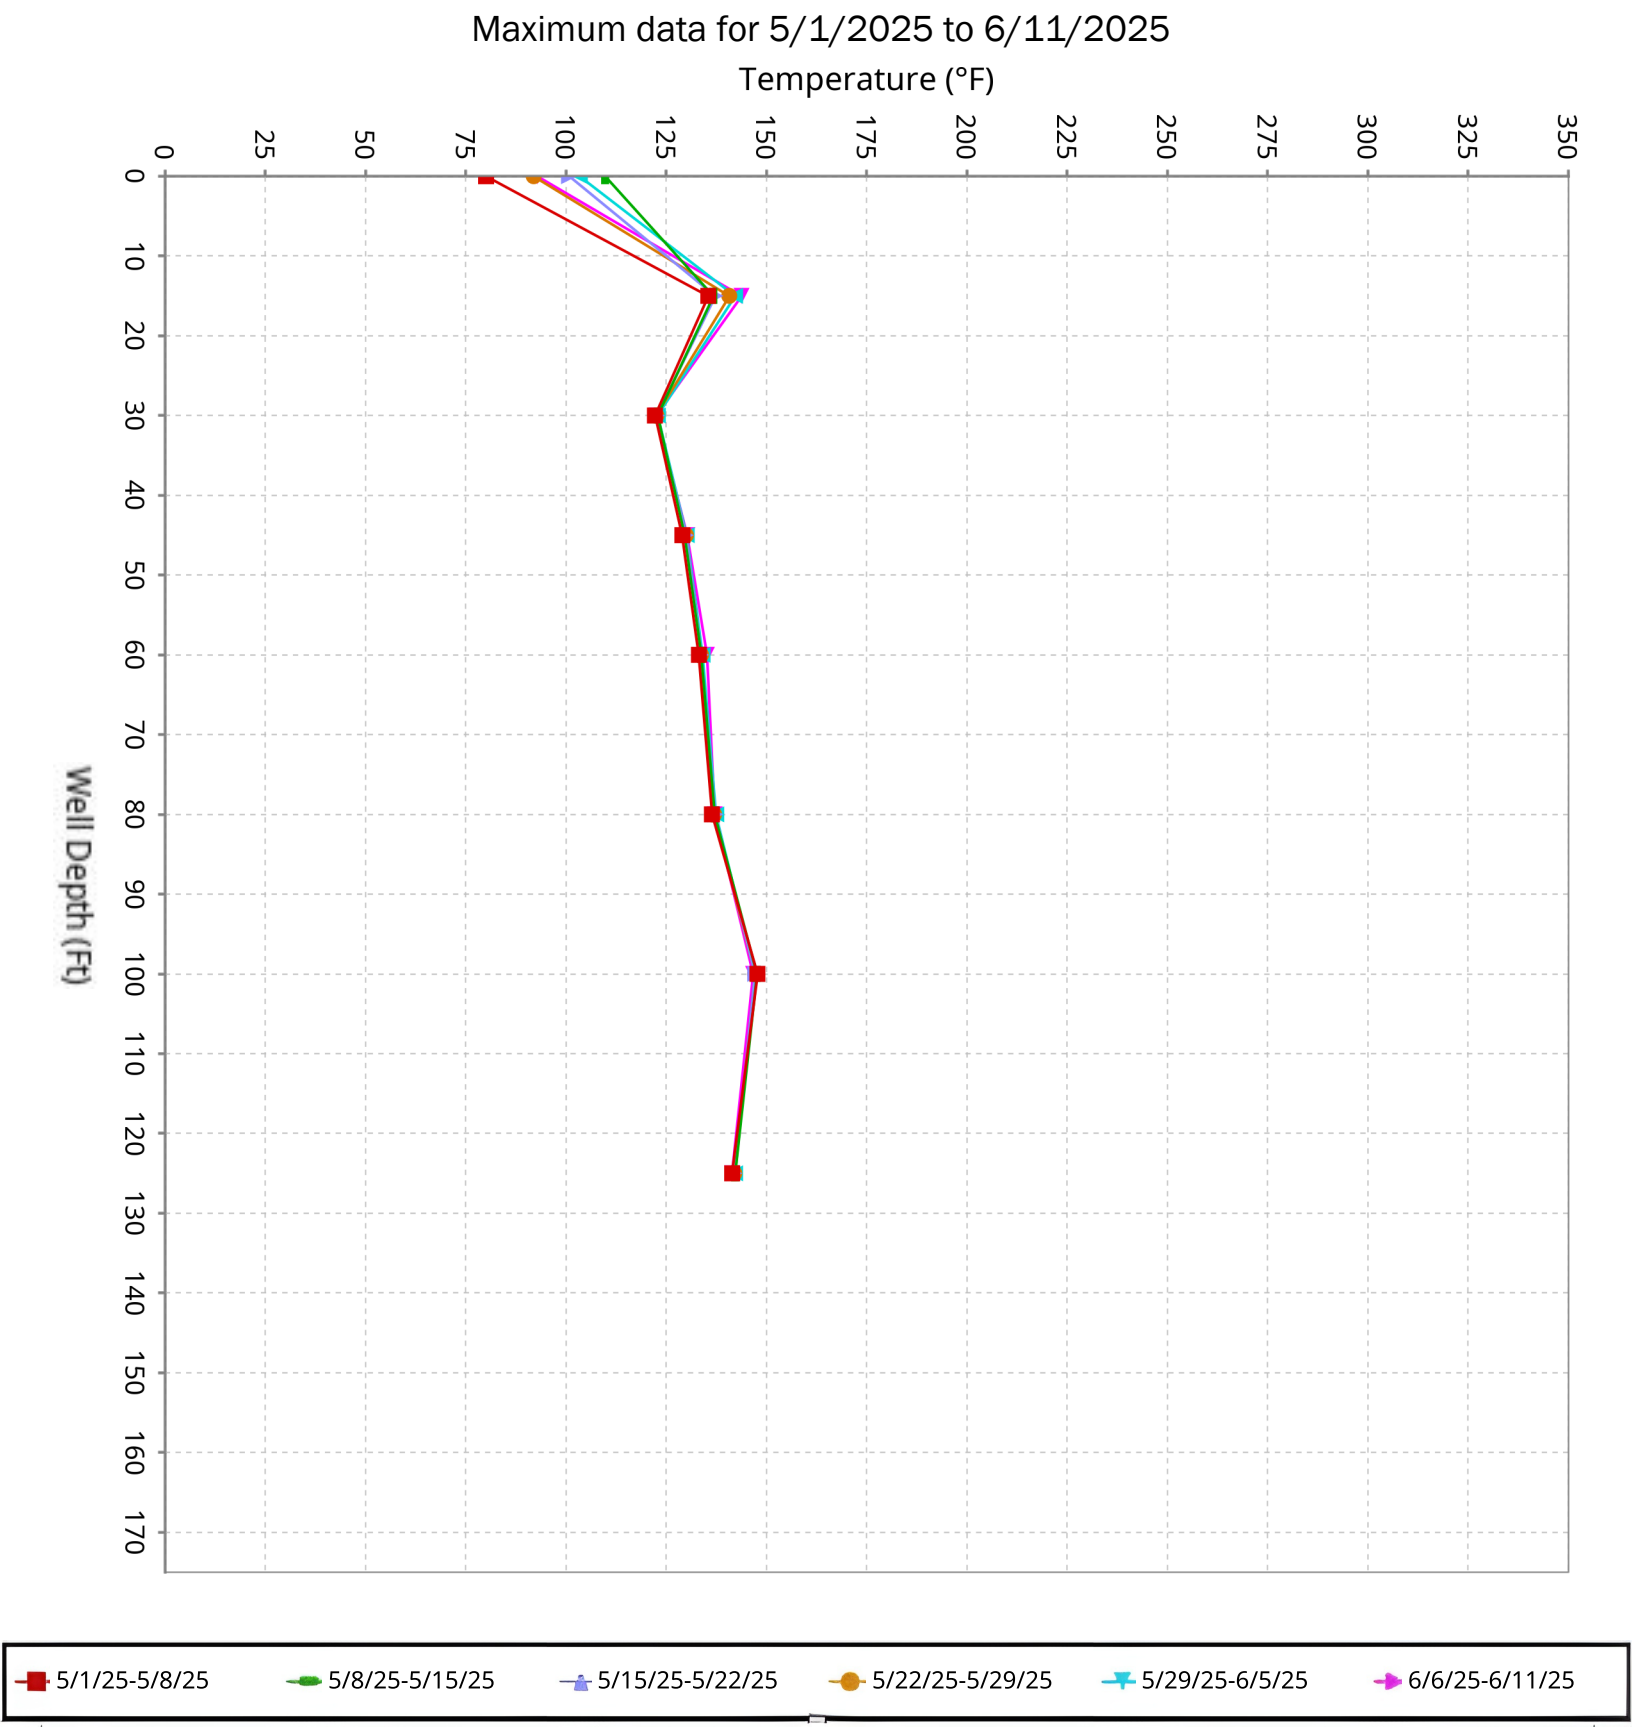

- TP-21
  - The 45-foot, 60-foot, and 95-foot thermocouple temperatures remained consistent with previous recorded temperatures.

SHEET: 1

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 5/15/2025 to 6/25/2025

From June 19, 2025, through June 25, 2025, there were two recorded temperature decreases and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Note that this one recorded temperature increase was an anomalous and likely erroneous reading as described below.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

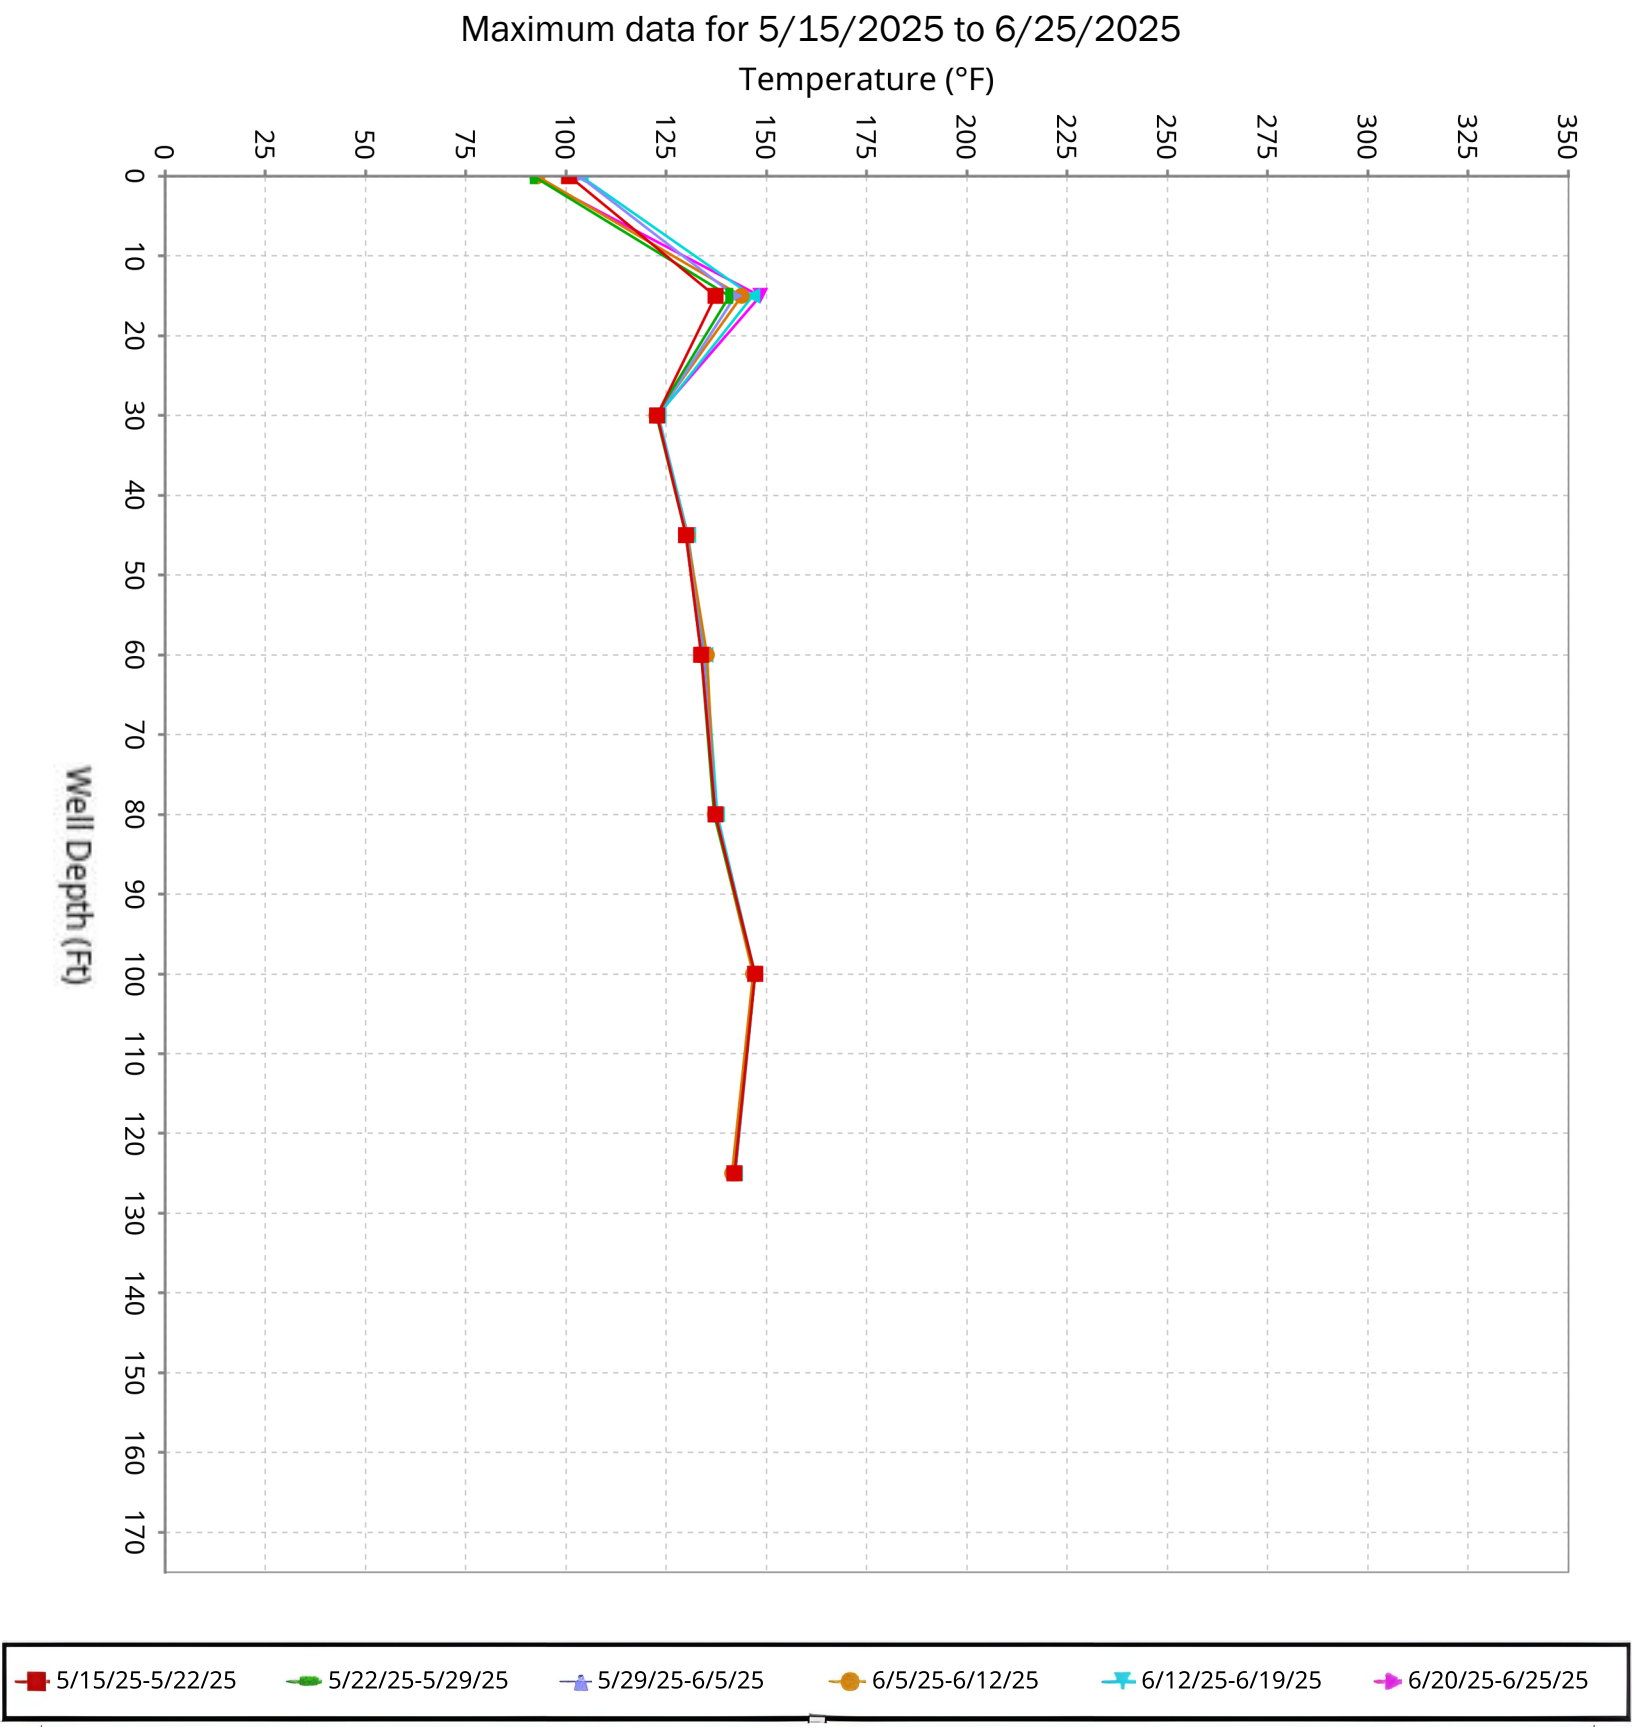

- TP-08
  - The 45-foot thermocouple showed a decrease in maximum temperature of 12°F from 163°F to 151°F from June 18th to June 24th.
- TP-11
  - The 45-foot thermocouple showed a decrease in maximum temperature of 10°F from 163°F to 153°F from June 17th to June 24th.
- TP-13
  - The 30-foot thermocouple remained consistent with previous recorded temperatures.
- TP-16
  - The 15-foot thermocouple remained consistent with previous recorded temperatures.
  - The 45-foot thermocouple showed an anomalous reading on June 22nd of 222°F for a single one-hour reading. Subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-16 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.

SHEET: 1

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 5/22/2025 to 7/2/2025

From June 26, 2025, through July 2, 2025, there was one recorded temperature decrease and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Note that the one recorded temperature increase reported last week was an anomalous and likely erroneous reading as described in last week's submittal and below.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

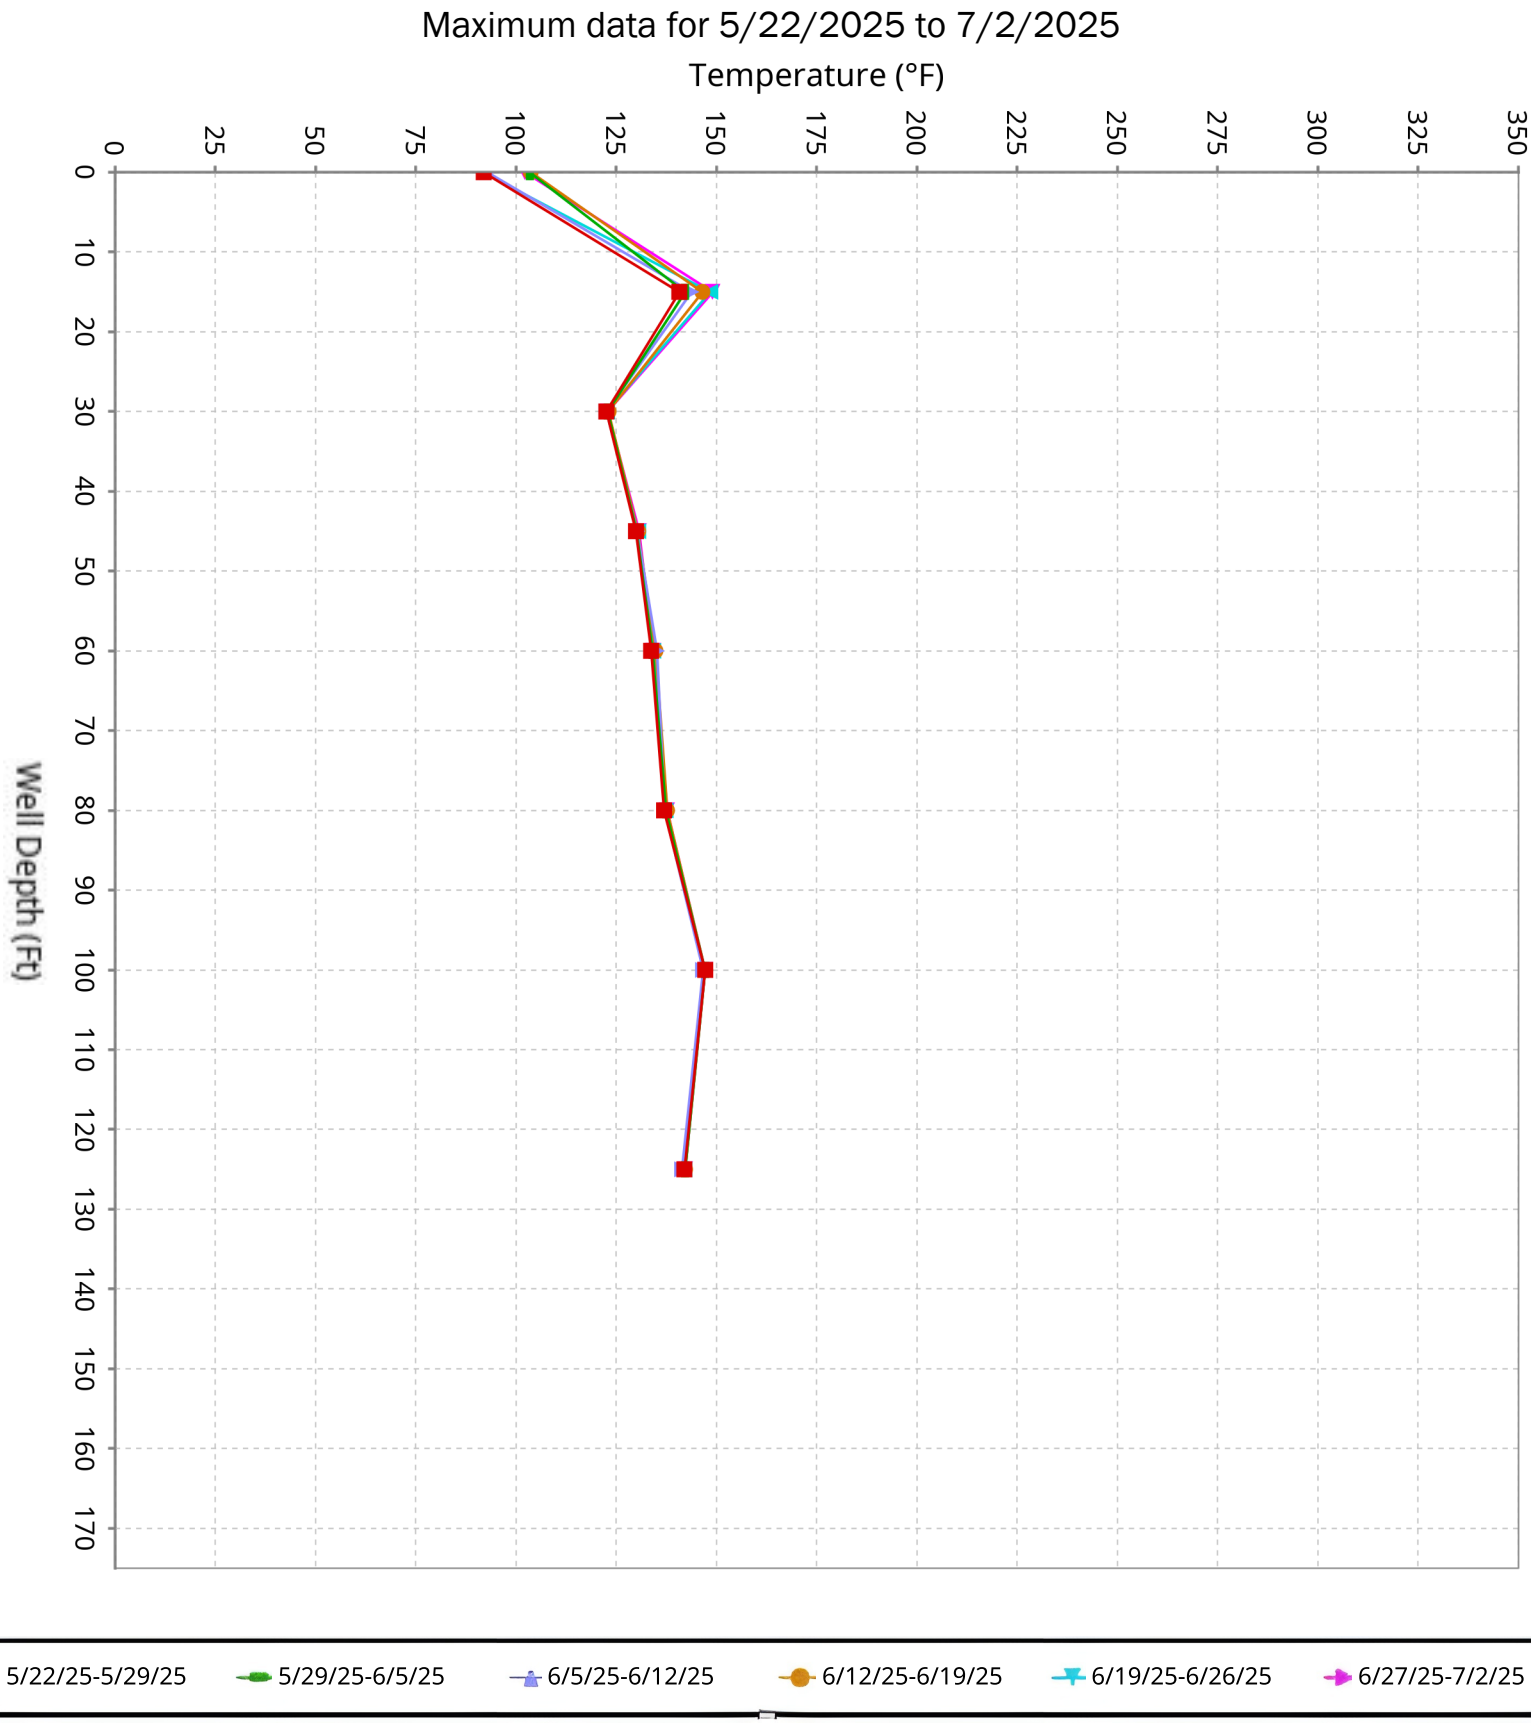

- TP-08
  - The 45-foot thermocouple remained consistent with previous recorded temperatures.
- TP-11
  - The 45-foot thermocouple showed a decrease in maximum temperature of 10°F from 161°F to 151°F from June 26th to July 2nd.
- TP-16
  - The 15-foot thermocouple showed an increase in maximum temperature of 11°F from 128°F to 139°F from June 26th to July 2nd.
  - The 45 foot thermocouple remained consistent with previous recorded temperatures. As noted in last week's submittal, the 45-foot thermocouple showed an anomalous reading on June 22nd of 222°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-16 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.

Reaction Committee

Report

July 10, 2025
File No. 01204123.21-13

Mr. Baitong Chen
South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, California 91765

Subject: Monthly Reaction Committee Determination on Reaction Area Boundary
Chiquita Canyon Landfill – Castaic, California

Dear Mr. Chen:

In accordance with Condition Nos. 9a and 9b of the Modified Stipulated Order for Abatement (SOFA) pertaining to the Chiquita Canyon Landfill (Landfill or Facility) (Case No. 6177-4), the Reaction Committee has reviewed newly acquired applicable data recorded during the month of June 2025, considered revisions of the estimated extent of elevated temperature landfill (ETLF) conditions exhibited at the subject Facility (referred to as the "Reaction Area" limits), and has prepared this determination on potentially revising the Reaction Area map.

Attachment A presents the Drawing, titled "Reaction Area Map", prepared by SCS Engineers (SCS) and dated 7/7/25. The Drawing depicts the Reaction Area boundary as prescribed in Condition No. 9a, which corresponds to the limits of Cells 1/2A, 2B/3, 4, and Module 2B/3/4 P2, as a solid black line. The Drawing also depicts the estimated extent of ETLF conditions being experienced at the site based on the Reaction Committee's review of scientific data as a dashed magenta line. The rationale that serves as the basis for considering adjustments and modifications to the Reaction Area boundary (or the determination to maintain the decreed boundary), include the following:

- Landfill Gas (LFG) wellhead temperatures in excess of approximately 160 degrees Fahrenheit.
- Poor gas quality (defined as methane levels of less than 30 percent) in conjunction with methane-to-carbon dioxide (CH_4:CO_2) ratios less than 1.0.
- The concentration of hydrogen (H_2) in the LFG measured greater than 2 percent by volume.
- The concentration of carbon monoxide (CO) in the LFG measured greater than 2,000 ppm.
- Accelerated settlement of the landfill surface, defined as approximately 18 inches or greater within a 60-day period, and cracks in landfill cover. This corresponds to a strain value (i.e., settlement rate) rate of 3 percent per year for areas with a 300-foot waste column depth, which we believe is a reasonable average depth in the subject area of interest.
- First-hand observations of Landfill and/or SCS engineering, construction, and operations and maintenance (O&M) field personnel who are on-site related to: 1) atypical excess leachate quantities (presence and quantity of liquids); 2) instances of pressurized liquids emitting from the landfill surface, from boreholes during drilling, and from LFG wells; and, 3) the characteristics of the odors originating from the select areas of the waste footprint (often

described as “chemical-like” and distinctly different from typical LFG or landfill working face odors).

- Observations of subsurface waste conditions and characteristics as noted on borehole drilling logs for recently installed new wells and/or probes.

- Subsurface temperatures recorded at the in-situ waste temperature probes during June 2025.

- Temperature of gas or liquids measured at depth within the LFG well riser pipe (using an automated transmitter or manual field instrumentation).

- Subsurface temperature and pressures associated with drilling activities for new LFG extraction wells during June 2025.

CONSIDERATIONS FOR POTENTIAL ADJUSTMENTS TO THE ESTIMATED EXTENT OF ETLF CONDITIONS (DASHED MAGENTA LINE)

In making its monthly determinations, the Reaction Committee evaluates the above set of data parameters, in conjunction with one another, to identify meaningful trends indicating ETLF conditions, as opposed to fluctuations exhibited in isolated datapoints.

Each month, the Reaction Committee scrutinizes particular areas of the Landfill that have previously exhibited abnormal or fluctuating data, when applicable. As discussed below, despite minor variances in discrete areas of the landfill, the Reaction Committee has not discerned any meaningful trends with respect to the June 2025 data that would indicate the reaction has expanded into these areas.

Near CV-24009 and CV-24011

Well CV-24009 is positioned within 60 feet or so of the delineated boundary line and Well CV-24011 is positioned within 25 feet or so of the delineated boundary. Both wells recorded LFG wellhead temperatures in the range of 160 to 162 degrees F during June, however the average LFG wellhead temperatures measured during March through June for these two wells were 135 and 153 F, respectively.

The LFG quality is marginal at CV-24009, which has exhibited an average methane (CH_4) concentration of 25 percent during January through June, and the methane-to-carbon dioxide (CH_4:CO_2) ratio in June was 0.3. The carbon monoxide (CO) concentration at CV-24009 measured during May and June was approximately 900 ppm. The hydrogen (H_2) concentration measured in June was 7.5 percent.

The LFG quality at CV-24011 is rather poor, with an average methane concentration of only 14 percent during January through June, and the methane-to-carbon dioxide (CH_4:CO_2) ratio in June was 0.2. The carbon monoxide (CO) concentration at CV-24011 measured during May and June was approximately 4,000 ppm. The H_2 concentration measured in June was 12.2 percent.

Adjacent well CV-24007 exhibits hydrogen (H_2) concentrations in the 2 to 3 percent range, but the average LFG wellhead temperatures measured during May and June are only 126 degrees F.

The Reaction Committee has identified gas movement from within the reaction area via existing horizontal collectors as the potential cause of the short-term increase in heat and longer-term trend of marginal to poor quality gas at these wells. Specifically, well CV-24009 is positioned immediately adjacent to H-1769 (at an elevation of 1335 feet) and CV-24011 is positioned immediately adjacent to H-59 (at an elevation of 1280 feet), both of which extend hundreds of feet into the reaction area, so it is possible that the source of the heat and reaction gas at these vertical wells is offset some distance away and is being conveyed toward the wells by the horizontal collectors' piping and trench. In addition, CV-24011 is equipped with a dedicated dewatering pump, so the recent increase in temperatures and the presence of increased reaction gas (as opposed to typical landfill gas) may be attributable to the lowering of perched leachate levels in this vicinity, which is enabling movement of heat and gas through the void spaces.

Near CV-24126

Well CV-24126 is positioned within 100 feet or so of the delineated boundary. Well CV-24126 recorded an LFG wellhead temperature of 161.7 degrees F during June, however the average LFG wellhead temperatures measured during March through June for this well was less than 142 degrees F.

The LFG quality at CV-24126 is poor, with an average CH_4 concentration of only 6 percent during January through June, and the CH_4:CO_2 ratio in June was 0.1. The CO concentration during May and June was 1,760 ppm.

Adjacent wells CV-2333, CV-24127, and CV-134 exhibited H_2 concentrations during June of 13, 6, and 11 percent, respectively. However, the average LFG wellhead temperatures measured at these three wells during May and June are only 127, 122, and 147 degrees F, respectively.

The Reaction Committee has identified gas movement from within the reaction area via existing horizontal collectors as the potential cause of the short-term increase in heat at CV-24126 and longer-term trend of marginal to poor quality gas at the adjacent three wells. Specifically, well CV-24126 is positioned in close proximity to H-56 (at an elevation of 1240 feet), which extends hundreds of feet into the reaction area, so it is possible that the source of the heat and reaction gas at this vertical well is offset some distance away and is being conveyed toward the wells by the horizontal collectors' piping and trench. In addition, CV-2333, CV-24126, and CV-24127 are equipped with a dedicated dewatering pump, so the recent increase in temperatures and the presence of increased reaction gas (as opposed to typical landfill gas) may be attributable to the lowering of perched leachate levels in this vicinity, which is enabling movement of heat and gas through the void spaces.

Near CV-2541 and CV-24068

Well CV-2541 is a new well that was installed on June 19, 2025, that is positioned within 25 feet or so of the delineated boundary line. It is positioned immediately adjacent to horizontal collector H-54 (at an elevation of 1225 feet) and H-1564 (at an elevation of 1245 feet), both of which extend hundreds of feet into the reaction area. Well CV-2541 initially recorded a temperature of 194 degrees F, but has since decreased to 130 degrees F. The average LFG wellhead temperature

measured in the adjacent well CV-24068 during May and June was 147 degrees F. The H_2 concentration measured in well CV-24068 during June was 9.6 percent. Considering the most recent temperatures are relatively low for ETLF conditions, along with the proximity to horizontal collectors and the fact that CV-2541 has only been monitored on a few instance since installation in mid-June, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of CV-2541 or CV-24068 is warranted at this time.

TEMPERATURE MONITORING PROBE DATA

The Reaction Committee reviewed the temperature measurements recorded during June 2025 by the in-situ temperature monitoring probes. As of June 2025, six of the 32 probes (TP-2, 3, 9, 11, 15, and 21) are located within the current estimated extent of ETLF conditions (dashed magenta line). Of the remaining twenty-six (26) probes positioned outside of the boundary, twelve (12) probes are positioned within relatively close proximity (within 200 feet) of this boundary. It is the Reaction Committee's opinion that the temperatures recorded by the 26 probes outside of the boundary during June 2025 are not indicative of a subsurface reaction and do not substantiate a decision to adjust the boundary of the Reaction Area at this time. The Reaction Committee is closely observing the temperature fluctuations in various depth intervals in TP-8, as well as the subtle increases in temperatures at the four deepest intervals in TP-13, to assess whether these constitute trends consistent with ETLF conditions in these locations. However, the LFG temperatures recorded at the co-located LFG wellheads (CV-24079 and CV-24073, respectively) remain less than 160 degrees F.

The Reaction Committee evaluated the 30-day maximum temperatures recorded in TP-26, TP-29, TP-30, and TP-31. The Reaction Committee noted differentiation between the 30-day maximum temperatures in these four probes compared to the 30-day maximum temperatures measured at the three probes within the current estimated extent of ETLF conditions (dashed magenta line), specifically TP-3, TP-9, and TP-21. Based on this differentiation, along with consideration of the other relevant criteria and data parameters, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of TP-26, TP-29, TP-30, and TP-31 is warranted at this time.

HYDROGEN CONCENTRATIONS

The Reaction Committee also evaluated the concentration of hydrogen in LFG during June 2025. Recall that certain wells positioned to the south and east of the Reaction Area boundary (where dewatering pumping was reactivated) have periodically demonstrated some increased hydrogen content in the LFG during the Reaction Committee's review of the data in previous months, which similarly was the case for the June data. The Reaction Committee noted in its review of the data that these wells did not exhibit elevated temperatures. There was no evidence of the increased heat that is typical with ETLF conditions present at the wells exhibiting atypical hydrogen concentrations. As noted previously, the Reaction Committee suspects this increased hydrogen content may be attributable to substantial dewatering being accomplished throughout the Reaction Area and may be associated with gas movement from within the Reaction Area by existing horizontal collectors in close proximity. Thus, the presence of elevated hydrogen in these isolated locations does not suggest that ETLF conditions are expanding south and east of the delineated boundary. Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area is warranted at this time.

CONCLUSION

As presented on the Drawing included as **Attachment A**, the estimated extent of ETLF conditions (dashed magenta line) is fully contained within the Reaction Area boundary decreed in the SOFA (solid black line). Because the ETLF conditions are fully contained within the Reaction Area boundary and have not expanded into a new cell, the Reaction Committee finds no basis to modify the Reaction Area boundary as prescribed in Condition 9a at this time.

There was no dissenting opinion among the Reaction Committee members regarding this monthly determination. Supporting data is presented on the Drawing included as **Attachment A.** The maximum temperature measurements recorded at the 32 in-situ waste temperature monitoring probes during June are presented in **Attachment B** in graphical format. The LFG wellhead temperatures recorded at the extraction wells for the entire Landfill footprint are reflected on the isothermal gradient range map presented as **Attachment C**. The CH_4:CO_2 ratios measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment D**. The H_2 concentrations measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment E**. The CO concentrations measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment F**. The landfill surface settlement isopach values measured on a quarterly basis (April 2, 2025 compared to July 2, 2025) in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment G**. The electronic database and recordkeeping platform enables these measurements to be downloaded into a tabular spreadsheet format, which can be submitted to the South Coast Air Quality Management District under separate cover, if requested.

ATTACHMENT B

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 5/22/2025 to 7/2/2025

From June 26, 2025, through July 2, 2025, there was one recorded temperature decrease and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Note that the one recorded temperature increase reported last week was an anomalous and likely erroneous reading as described in last week's submittal and below.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

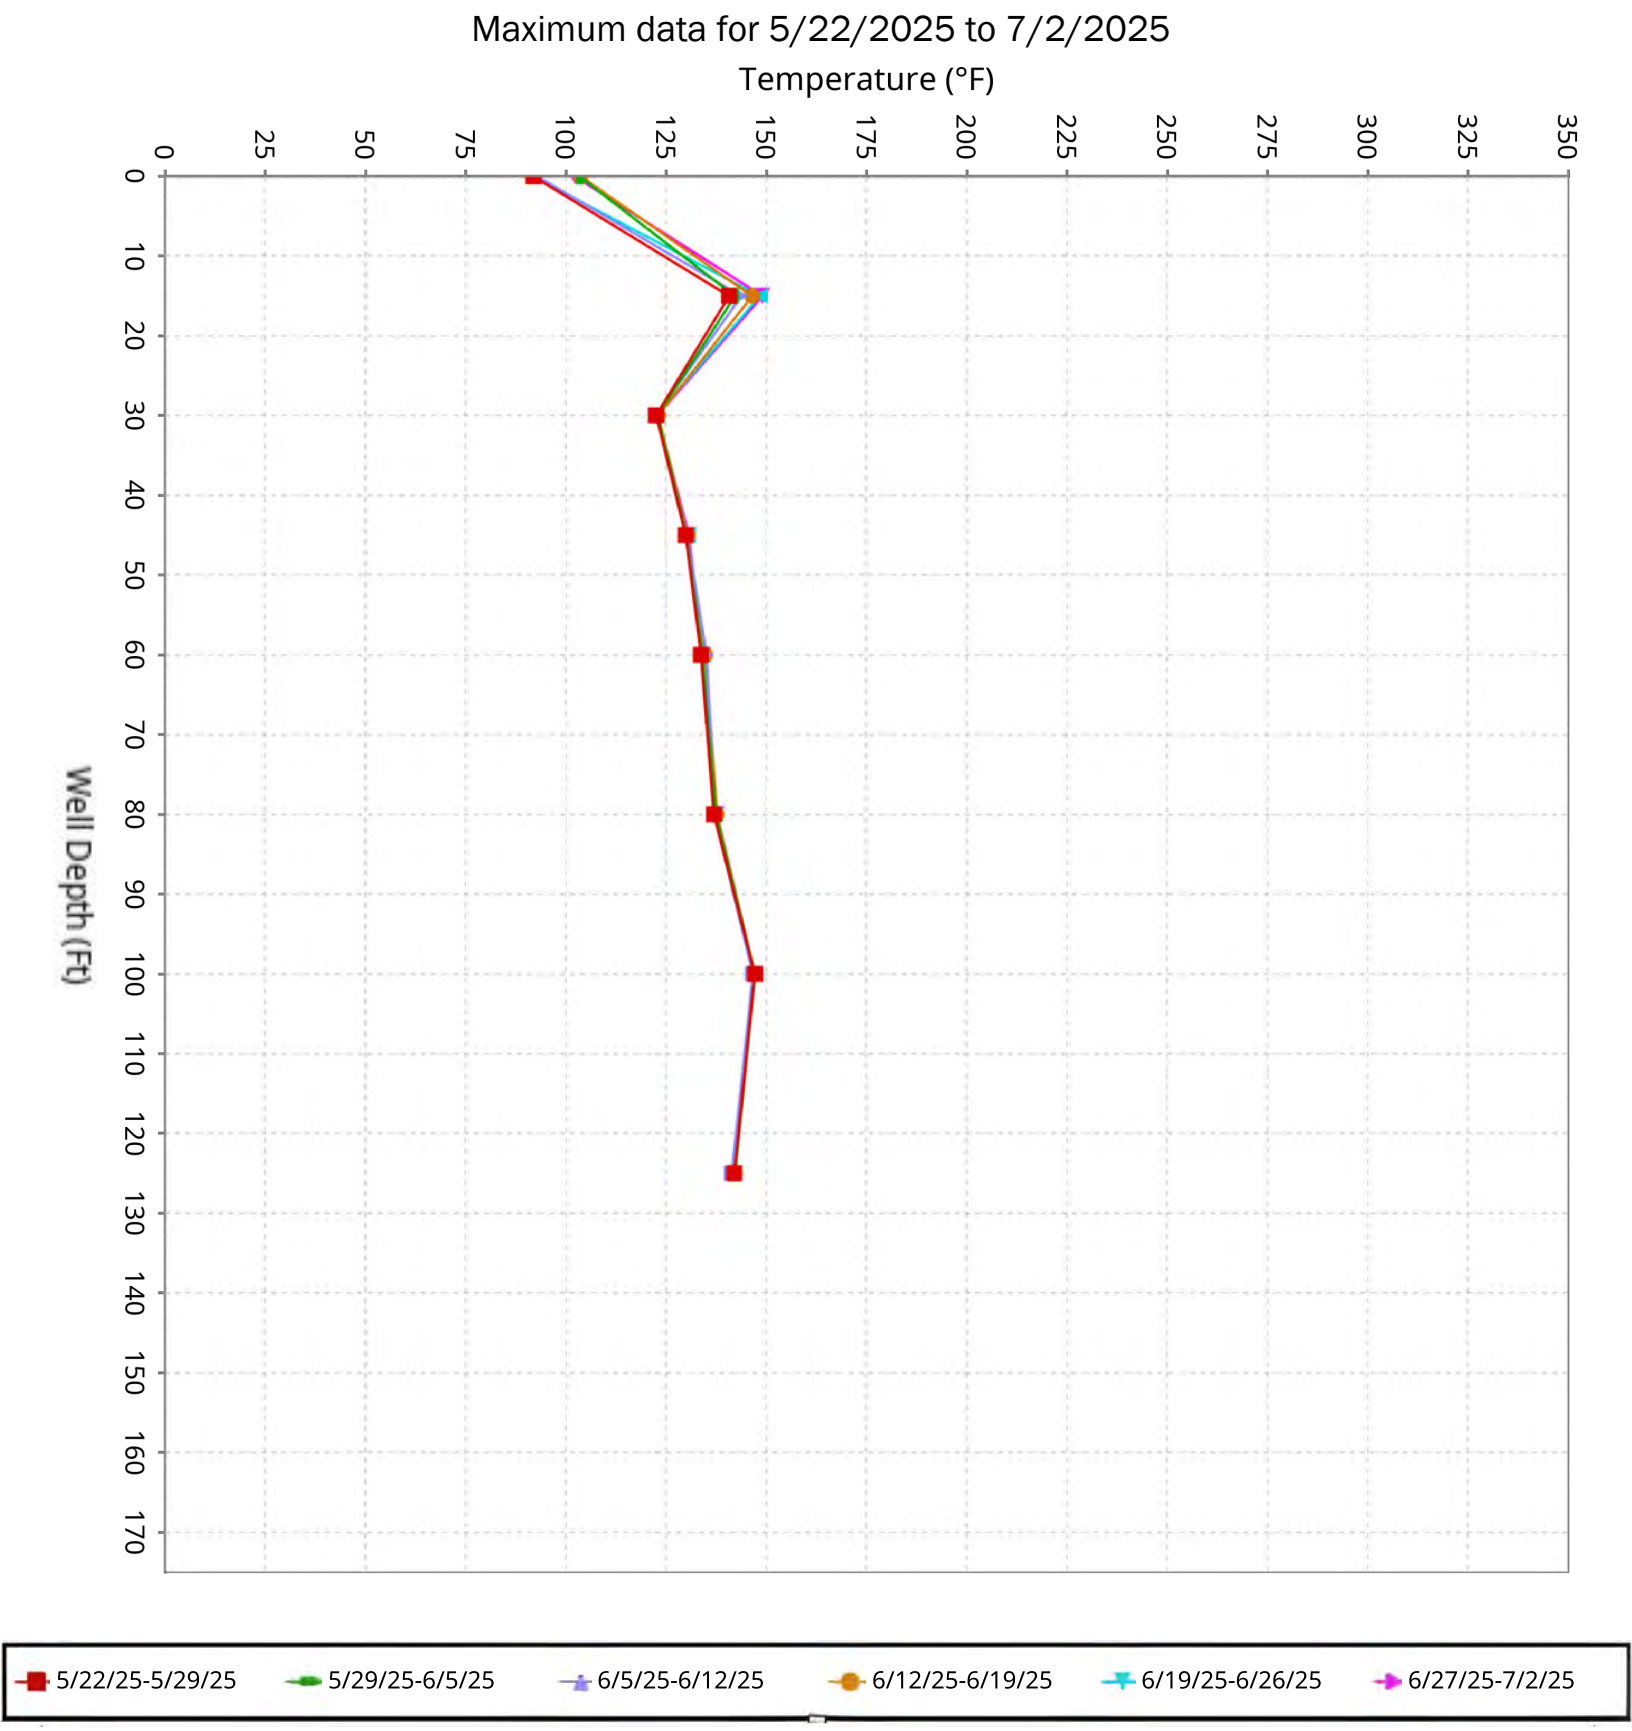

- TP-08
  - The 45-foot thermocouple remained consistent with previous recorded temperatures.
- TP-11
  - The 45-foot thermocouple showed a decrease in maximum temperature of 10°F from 161°F to 151°F from June 26th to July 2nd.
- TP-16
  - The 15-foot thermocouple showed an increase in maximum temperature of 11°F from 128°F to 139°F from June 26th to July 2nd.
  - The 45 foot thermocouple remained consistent with previous recorded temperatures. As noted in last week's submittal, the 45-foot thermocouple showed an anomalous reading on June 22nd of 222°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-16 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.

LEGEND

- 1150 — EXISTING TOPOGRAPHIC CONTOUR
- EXISTING CELL LIMITS (APPROXIMATE)
- TP-XX — INSTALLED TEMPERATURE PROBES - STANDALONE
- TP-XX — INSTALLED TEMPERATURE PROBES - INSTALLED WITHIN WELL CASING
- REACTION AREA BOUNDARY (APPROXIMATE) - BASED ON DATA REVIEW
- REACTION AREA BOUNDARY - CONDITION 9A

GENERAL DRAWING NOTES:

1. EXISTING TOPOGRAPHIC SURVEY INFORMATION SHOWN WAS PROVIDED BY PROPELLER. AERIAL PHOTOGRAPHY DATED MAY 14, 2025.
2. NORTH ARROW SHOWN HERE IS REFERENCE TO THE CALIFORNIA STATE PLANE ZONE V COORDINATE SYSTEM, NAD 83.
