

13 de junio de 2025

Karen Gork
Jefa Especialista en Salud Ambiental
Agencia de Cumplimiento Local del Condado de Los Ángeles
5050 Commerce Drive
Baldwin Park, California 91706

Asunto: Informe Mensual de mayo de 2025 Conforme a los Objetivos 1A-3 y 5 de la Orden de Cumplimiento de la LEA del 6 de junio de 2024 y a la Carta del 30 de julio de 2024, Vertedero de Chiquita Canyon, Castaic, California

Estimada Sra. Gork:

SCS Engineers (SCS), en nombre de Chiquita Canyon, LLC (Chiquita), mediante el presente le proporciona al Programa de Gestión de Desechos Sólidos del Departamento de Salud Pública del Condado de Los Ángeles, que actúa como Agencia de Cumplimiento Local (LEA), un informe mensual, en cumplimiento con los Objetivos 1A-3 y 5 de la Orden de Cumplimiento de la LEA con fecha 6 de junio de 2024 (Orden de Cumplimiento) y la correspondencia posterior relacionada recibida de la LEA. Este informe abarca el período mensual de mayo de 2025.

Chiquita Canyon Landfill (CCL o el Vertedero) es un vertedero/centro de disposición de desechos sólido, ubicado en 29201 Henry Mayo Drive en Castaic, California. Con relación al Vertedero, Chiquita opera un sistema de recolección y control de biogás. SCS elaboró y presentó el Informe Resumido sobre las Lecturas de Monóxido de carbono e Hidrógeno (Informe Resumido) a la LEA el 6 de junio de 2024 en nombre de Chiquita, en respuesta a las directivas indicadas en las cartas de la LEA con fecha 5 de abril de 2024 y 28 de mayo de 2024, sobre la toma de datos de biogás y conforme al Objetivo 1A-2 de la Orden de Cumplimiento. La LEA, en colaboración con el Departamento de Recursos, Reciclaje y Recuperación de California (CalRecycle), revisó el Informe Resumido y determinó que cumplía con el Objetivo 1A-2. La LEA estableció varios requerimientos nuevos para que Chiquita cumpla con el Objetivo 1A-3 en la correspondencia de seguimiento con fecha 30 de julio de 2024.

Este informe fue elaborado según los Objetivos 1A-3 y 5 de la Orden de Cumplimiento, la correspondencia de seguimiento de la LEA con fecha 30 de julio de 2024, la carta de Chiquita con fecha 3 de septiembre de 2024, la reunión del 12 de septiembre de 2024 con la LEA y la correspondencia de seguimiento de la LEA con fecha 19 y 27 de noviembre y 3 de diciembre de 2024.

Puntos de Cumplimiento con el Objetivo 1A-3

1. Presentar los resultados de los análisis de laboratorio de las muestras mensuales de monóxido de carbono (CO) e hidrógeno (H₂) tomadas de un set de pozos de biogás (LFG) seleccionados por la LEA. Consulte en la Tabla 1, las columnas rotuladas "CO" y "H₂".

Los resultados de los pozos monitoreados se muestran en el **Adjunto A**.¹ Los datos se están presentando a la LEA en un informe independiente firmado por un ingeniero matriculado, conforme al Objetivo 1A-3 de la Orden de Cumplimiento. Como se indicó en correspondencias previas de Chiquita y en los informes mensuales, este informe no incluye datos de los pozos CV-100, CV-1420, CV-1532, CV-2202, H-1774S, TC-2385A y TC-2385S, ya que esos pozos fueron abandonados, ni del pozo CV-2332, ya que ese pozo no se instaló nunca. Todos los demás pozos se evaluaron durante el mes de mayo de 2025.

Como se trató en la reunión del 12 de septiembre de 2024 y como se informó previamente, los gráficos que muestran las tendencias de CO y H₂ se proporcionan en el **Adjunto D** y se tratan en mayor detalle a continuación.

2. Proporcionar datos de lecturas de gases fijos (CH₄, O₂ y CO₂) entre un set de pozos de LFG seleccionado por la LEA. Consulte en la Tabla 1 la columna rotulada "Gas Fijo CH₄, O₂, CO₂".

Los resultados de los pozos monitoreados se proporcionan en el **Adjunto A**.

3. Tomar temperaturas pozo abajo en 34 pozos, para confirmar las lecturas de las temperaturas de los cabezales de los pozos de gas según el requerimiento de los Estándares de Rendimiento de Fuentes Nuevas (NSPS). Consulte en la Tabla 1 en la columna rotulada "Monitoreo de Temperatura Pozo Abajo".

Chiquita entiende de la correspondencia de la LEA del 27 de noviembre de 2024 y como se indica en los informes mensuales previos, que en este momento solo debe tomar muestras de los pozos a la frecuencia anual indicada en los protocolos NSPS, pero que la LEA podrá requerir monitoreos más frecuentes de hasta diez (10) pozos seleccionados por la LEA. Chiquita está a la espera de la selección de la LEA de esos pozos.

Chiquita proporciona de todos modos en el **Adjunto B** los gráficos de las temperaturas pozo abajo relacionados con los siguientes pozos, desde lugares fijos, que contienen el Sistema de Bombeo Lorentz con los sensores de temperatura integrales: CV-2301 (este sensor parecía estar funcionando mal, ya que la temperatura estaba demasiado baja; y se reparó el 4 de junio de 2025), CV-2302, CV-2303, CV- 2315, CV-2351, CV-2352 CV-24017, CV-24065 y CV-24095.

Los sistemas Lorentz fuera de línea informados previamente para los pozos CV-2352 y CV-24095 se repararon y se volvieron a activar para el 19 de mayo de 2025, como se muestra en los gráficos adjuntos.

¹ Los laboratorios informaron datos de otros pozos de LFG fuera de los seleccionados para que la LEA tome muestras; los datos adicionales están relacionados con requerimientos de informes separados del Distrito de Gestión de la Calidad del Aire de la Costa Sur (AQMD de la Costa Sur) y por lo tanto pueden desestimarse para los propósitos de este informe.

Por favor, tenga en cuenta que el sistema Lorentz de las bombas en CV-2350 actualmente estén fuera de línea y están en el proceso de repararse.

Como se indicó previamente, SCS continuará tomando las temperaturas pozo abajo todos los años e informará los resultados a medida que vaya obteniendo datos de cada lugar. SCS realizó un monitoreo anual de la temperatura pozo abajo en 28 lugares durante marzo de 2025, como se informa en el informe mensual previo. Durante mayo de 2025, SCS realizó monitoreos de temperatura pozo abajo en CV-2353 para el monitoreo anual de 2025: (consulte en el **Adjunto B** las fechas del monitoreo anual).

Queda un lugar para el monitoreo pozo abajo anual para fines de mayo de 2025: CV-2002. Se espera que este lugar se monitoree durante el segundo trimestre de 2025, si lo permite la seguridad.

4. Tomar muestras de los 40 pozos seleccionados para analizar VOCs utilizando el método TO-15. Consulte en la Tabla 1, la columna rotulada “VOC (TO-15)”.

Los resultados de los pozos monitoreados se proporcionan en el **Adjunto A**.²

5. Continuar tomando muestras y monitoreando los 6 pozos horizontales indicados en el Adjunto 1 donde los números de los pozos están resaltados en amarillo. En este momento podrán liberarse 42 pozos horizontales de las tomas de muestras continuas, pero estos pozos podrán ser incluidos más adelante, dependiendo de las futuras presentaciones de datos. Consulte en la Tabla 1 los números de pozo resaltados en azul.

Como se indicó en la carta del 3 de septiembre y se informó en los informes mensuales previos, dos (2) de los seis (6) pozos horizontales (H-1774S y H-1560S) fueron abandonados cuando se instalaron los nuevos pozos de extracción vertical y por lo tanto los datos de esos pozos no están incluidos. Los datos de los otros cuatro (4) pozos horizontales están en el **Adjunto A**.

6. Agregar 20 pozos verticales a los protocolos de toma de muestras mensuales de temperatura en el cabezal y de LFG. Consulte en la Tabla 1 los números de pozo resaltados en verde.

Como lo transmitió la LEA durante nuestra reunión del 12 de septiembre de 2024 y se volvió a indicar en nuestro informe mensual, comprendemos que la LEA está requiriendo datos analíticos de laboratorio para gases fijos, CO y H₂, como también datos de campo. Los resultados del laboratorio están en el **Adjunto A**. Los datos de campo con las temperaturas del gas en el cabezal del pozo se muestran en la Tabla 2 en el **Adjunto A**.

Comprendemos de la correspondencia de la LEA del 27 de noviembre de 2024 que se requerirán datos analíticos del laboratorio para los gases fijos especificados.

Se debe tener en cuenta que nuevamente no se volvieron a tomar muestras en los siguientes pozos en mayo de 2025 por los siguientes motivos indicados en los informes mensuales previos:

² El Pozo CV-24142 aparece dos veces en la Tabla 1 de la carta de la LEA del 30 de julio - uno requiere tomas de muestras de VOC y el otro no. Chiquita tomó muestras de este pozo para analizar los VOCs.

CV-1420 – Abandonado durante la Expansión del GCCS en 2024 debido a la reducción de los flujos de gas.

CV-2202 – Abandonado durante la Expansión del GCCS en 2024 debido a la reducción de los flujos de gas.

CV-2332 – Este pozo no existe. Este pozo fue propuesto para instalación en otoño de 2023, pero se instalaron otros pozos en la zona en lugar del CV-2332 cuando la cantidad de pozos aumentó según la Orden de Depuración Estipulada (la Orden Estipulada) del Sur avanzando sin esfuerzo AQMD de la Costa Sur.

7. Trazar en el mapa del sitio denominado "Mapa de GCCS Existentes - Pozos de Extracción Vertical de LFG" con fecha 06/06/2024 las ubicaciones de los siguientes 19 pozos: CV-24002, CV-24003, CV-24007, CV-24017, CV-24053, CV-24055, CV-24065, CV-24071, CV-24075, CV-24077, CV-24079, CV-24082, CV-24083, CV-24088, CV-24095, CV-24096, CV-24097, CV-24098 y H-1403W. Para el pozo H-1403W, proporcionar la ubicación horizontal de las tuberías y un estimativo sobre dónde es más probable que ocurran temperaturas elevadas (195°F). Consultar en la Tabla 1 los números de pozo resaltados en rojo y H-1403W (resaltado en amarillo).

Las ubicaciones de los pozos arriba identificados se muestran en el Mapa en el **Adjunto C**.³

8. Incluir en el informe mensual un mapa del asentamiento/calor como se muestra a continuación, comenzando con los datos del mapa de calor más antiguo disponible para cada mes hasta el presente. Si es posible, los mapas topográficos deberán mostrar intervalos de contornos de 2 pies.

La LEA aclaró en su correspondencia con fecha 27 de noviembre y 3 de diciembre de 2024 que, en lugar de esta solicitud, Chiquita podrá presentar mapas trimestrales junto a sus resúmenes mensuales de las fisuras y grietas por tensión, que se presentan el segundo martes de cada mes. Chiquita le ha estado presentando a la LEA mapas isopáquicos trimestralmente conforme a esta indicación. Ante una mayor revisión, Chiquita puede preparar estos mapas isopáquicos mensualmente. Estamos presentando un mapa isopáquico con fecha 10 de junio de 2025 y estamos comparando los datos del 30 de abril de 2025 con los datos del 28 de mayo de 2025 con este informe, como **Adjunto F**.

9. Proporcionar los resultados de las tomas de muestras en un informe independiente apropiado con el análisis, tablas, AQ/QC y métodos, firmado por un profesional registrado, etc., como se describe en los Objetivos 1A-2 y 1A-3 de la Orden de Cumplimiento.

CCL ha proporcionado la información arriba solicitada y los datos crudos en el **Adjunto A**, como también una figura con la zona reactiva indicada en base a datos, que incorpora datos de asentamientos (consulte el **Adjunto F**). Se proporcionan los gráficos de las temperaturas de los pozos con bombas Lorentz (9 lugares). El otro pozo, CV-2002, será evaluado durante el segundo trimestre de 2025 si las mediciones de temperatura del LFG requieren monitoreo anual y si es seguro acceder.

Se debe tener en cuenta que además de los pozos indicados en respuesta a la solicitud con fecha 30 de julio de 2024 en la Tabla 1 que no pudieron ser testeados, tampoco pudieron testearse los siguientes pozos que solo requerían datos analíticos,

³ La LEA reconoció en su correspondencia del 20 de noviembre de 2024 que no están ocurriendo temperaturas altas en el pozo H-1403W. Por lo tanto, no trazamos la temperatura máxima en el pozo H-1403W.

como se informó previamente, porque fueron abandonados durante la expansión del GCCS de 2024 debido a que bajó el flujo de gas conforme a los requerimientos del NSPS: CV-100, CV-1532, H-1560S, H-1774S, TC-2385A, TC-2385S, CV-2202 y CV-1420. Finalmente, como también se informó previamente, nunca se instaló el CV-2332.

Procedimientos para la Toma de Muestras

Se tomaron muestras de gas utilizando bolsas Tedlar/Mylar, como se describe en la carta del Chiquita del 3 de septiembre de 2024 y en los informes mensuales que se entregaron a laboratorios certificados para su análisis.⁴ Se analizaron todos los datos de gas permanente (CH₄, CO₂, O₂, N₂, CO y H₂) dentro de las 24 horas de toma de muestra solicitada. SCS continúa creyendo que el uso del tiempo de retención de 72 horas aprobado por EPA para estas muestras sería apropiado y correcto, conforme a las prácticas de laboratorio estándar. Sin embargo, en respuesta a la correspondencia de la LEA del 17 de marzo de 2025, SCS continuará solicitando que los laboratorios utilicen tiempos de retención de 24 horas para todos los gases fijos, que incluyen CO, H₂ y VOCs tomados utilizando bolsas Mylar. Durante mayo de 2025, sin embargo, los laboratorios analizaron las siguientes muestras para analizar los VOCs utilizando TO-15 dentro de las 48 horas (en lugar de las 24 horas solicitadas) debido a la capacidad del laboratorio: CV-103, CV-113, CV-2007, CV-2315, CV 24053 y CV-24127. SCS conversó sobre el problema y reiteró su requerimiento al laboratorio, que solicitó que se tomen muestras de bolsas duplicadas de cada lugar, requiriendo análisis de TO-15 de SCS en el campo, para mejorar la eficiencia. Esto permitirá que el laboratorio opere ambos instrumentos analíticos simultáneamente, para mantener el requerimiento de 24 horas tanto para gases permanentes como para VOCs. No obstante, si se requieren más muestras o si los laboratorios tienen un cambio en la carga de trabajo, este tiempo de retención podrá cambiar, caso en el que se le informará a la LEA como corresponda.

Se tomaron otros datos de los gases y las presiones utilizando un Medidor de Gas Envision Irwin o un dispositivo de monitoreo de Gases Landtec GEM 5000. Estos instrumentos miden las concentraciones de gas combustible en el aire, directamente en una de dos escalas: la primera, como un porcentaje por volumen del límite explosivo inferior (LEL) de gas metano en el aire (0 a 5 por ciento) y el otro como un porcentaje por volumen (0 a 100 por ciento) en el gas tomado como muestra. El límite de detección de estos instrumentos es de aproximadamente 0.10 por ciento por volumen.

Los procedimientos para testear el monitoreo de gases fueron los siguientes:

- Conectar la tubería de toma de muestras, abrir la válvula de prueba, observar la presión y registrar los datos.
- Encender la bomba de las muestras, purgar un mínimo de un volumen de la sonda y observar y registrar las concentraciones de metano, oxígeno y dióxido de carbono en el gas cuando se hayan estabilizado las lecturas.
- Cerrar la válvula de prueba, desconectar los instrumentos de toma de muestras y resguardar la ubicación de la muestra.

Conclusiones del Objetivo 1A-3

⁴ La LEA aprobó verbalmente la recolección utilizando bolsas Tedlar/Mylar, en una llamada del 10 de abril de 2024, como se indicó en la correspondencia de seguimiento con fecha 27 de noviembre de 2024.

En mayo de 2025 se realizó el décimo monitoreo en cumplimiento con el Objetivo 1A-3 de la Orden de Cumplimiento. Los datos tomados en mayo de 2025 y evaluados para este informe son consistentes con los datos tomados los meses anteriores desde agosto de 2024 hasta abril de 2025, como también los datos tomados y evaluados por el Comité de la Reacción establecidos por la Orden Estipulada para evaluar la zona reactiva, que incluyen los datos de mayo de 2025 más recientemente evaluados por el Comité de la Reacción el 10 de junio de 2025. Consulte el **Adjunto E**.

Por los motivos descritos en el informe adjunto del Comité de la Reacción de junio, la alineación del alcance estimado de las condiciones del vertedero de temperaturas elevadas (ETLF) exhibidas en el Vertedero (a las que se hace referencia como límites de la "Zona Reactiva") se ajustó aproximadamente al sudeste para que abarque CV-24062, CV-24063, CV-24064, CV-24083, CV-24084 y TP-11. El informe también describe cómo las condiciones observadas en estos pozos potencialmente se atribuyen a condiciones dentro de la zona reactiva como se delineó el mes anterior pero que de todas formas el Comité de la Reacción creyó que era prudente instituir estos ajustes. El informe también indica que el Comité de la Reacción cree que estos ajustes no necesariamente indican una expansión que esté experimentando la reacción en la parte noroeste del Vertedero.

Como los niveles de líquidos por la instalación de otras Bombas Eléctricas y Neumáticas Lorentz continúan cambiando, continuamos viendo los cambios previstos en porcentajes de Gases Permanentes, Monóxido de Carbono e Hidrógeno y los cambios en las temperaturas ya que puede extraerse y pasarse a pozos de extracción a medida que se van reduciendo los niveles de líquido. Esto se continúa demostrando en los gráficos de los pozos a varias escalas en el **Adjunto D**, que incluyen gráficos de los gases permanentes, temperatura y otras tendencias en un período de seis (6) meses. Se debe tener en cuenta que los gráficos fueron creados utilizando resultados de equipos de monitoreo de biogás estándar y no contienen datos de laboratorio. SCS también incluyó gráficos de Hidrógeno y Monóxido de Carbono separados utilizando los resultados del laboratorio, para su uso y revisión.

Además, la instalación de tuberías de mayor diámetro ha mejorado la recolección de otros gases de todo el Vertedero. Desde marzo de 2025, los índices de flujo de biogás que queman los dispositivos de depuración aumentaron de 13,500 cfm a 15,000 cfm. Se debe tener en cuenta que, durante mayo de 2025, la extracción de gas general del Vertedero fue de aproximadamente 641,521,440 pies cúbicos. Se espera que este índice de extracción y los futuros aumentos previstos a medida que continúan expandiéndose los sistemas de recolección, mejorarán la composición del gas de los pozos en la zona reactiva a medida que más vacío y el movimiento de gas resultante vaya permitiendo que se extraiga más gas de la reacción y del vertedero normal.

Chiquita continuará evaluando los datos en futuros informes mensuales, a medida que se vayan tomando más datos.

Puntos de Cumplimiento con el Objetivo 5

Este informe incluye en el **Adjunto D** mapas individuales superpuestos con los siguientes datos para mayo de 2025, en un formato fácil de comprender, conforme al Objetivo 5 de la Orden de Cumplimiento.

- Zona reactiva definida;

- Expansión de la zona reactiva, si hubiera;
- Datos semanales de TMP; y
- Datos de LFG que incluyen, de forma enunciativa más no limitativa, datos de CH₄, CO₂, O₂, Temperatura CO y de H₂.

El objetivo 5 también requiere un "asentamiento con mapas de calor". Este informe incluye en el **Adjunto F** un mapa isopáquico con fecha 10 de junio de 2025 que compara los datos del 30 de abril de 2025 con los datos del 28 de mayo de 2025.

Los abajo firmantes son un profesional matriculado y un Gerente Regional, Vicepresidente de SCS Engineers.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S050603-01/10

Enclosed are the results for sample(s) received 5/6/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride and 1,2,4-trichlorobenzene.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results are flagged with the Q qualifier.
- Benzyl chloride exhibited low recovery in the continuing calibration verification indicating a possible low bias. Results are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/15/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S050704-01/10

Enclosed are the results for sample(s) received 5/7/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride and 1,2,4-trichlorobenzene.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results are flagged with the Q qualifier.
- Benzyl chloride exhibited low recovery in the continuing calibration verification indicating a possible low bias. Results are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/16/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S050812-01/04

Enclosed are the results for sample(s) received 5/8/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride and 1,2,4-trichlorobenzene.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results are flagged with the Q qualifier.
- Benzyl chloride exhibited low recovery in the continuing calibration verification indicating a possible low bias. Results are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/19/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S051208-01/10

Enclosed are the results for sample(s) received 5/12/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride, and 1,2,4-trichlorobenzene.
- Benzyl chloride exhibited low recovery in the continuing calibration verification (CCV) indicating a possible low bias.
- Ethyl acetate exhibited a high recovery in the CCV. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 5/21/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S051302-01/10

Enclosed are the results for sample(s) received 5/13/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride, and 1,2,4-trichlorobenzene.
- Benzyl chloride exhibited low recovery in the continuing calibration verification (CCV) indicating a possible low bias. Results are flagged with the Q qualifier.
- Ethyl acetate exhibited a high recovery in the continuing calibration verification (CCV) indicating a possible high bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 5/22/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S051402-01/10

Enclosed are the results for sample(s) received 5/14/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride, and 1,2,4-trichlorobenzene.
- Benzyl chloride exhibited low recovery in the continuing calibration verification (CCV) indicating a possible low bias.
- Ethyl acetate exhibited a high recovery in the CCV. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/29/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S051507-01/10

Enclosed are the results for sample(s) received 5/15/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride and 1,2,4-trichlorobenzene.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/28/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S051905-01/07

Enclosed are the results for sample(s) received 5/19/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride and 1,2,4-trichlorobenzene.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/30/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mark Johnson", is written over a light blue horizontal line.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S052004-01/06

Enclosed are the results for sample(s) received 5/20/25 by Air Technology Laboratories. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA Method TO-15 – Samples collected in Mylar bags. Quadratic regression calibration was required for acetone, benzyl chloride and 1,2,4-trichlorobenzene.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating possible high bias. Results were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim and Ali Ferrara on 5/30/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink, appearing to read "M. Johnson".

Item 7 – Well Location Map

- GENERAL DRAWING NOTES:
1. EXISTING TOPOGRAPHIC SURVEY INFORMATION SHOWN WAS PROVIDED BY PROPPELLER. AERIAL PHOTOGRAPHY DATED MAY 21, 2025.
 2. NORTH ARROW SHOWN HERE IS REFERENCE TO THE CALIFORNIA STATE PLANE ZONE V COORDINATE SYSTEM, NAD 83.
 3. THE LOCATION OF ANY EXISTING PIPING, VALVES, TIE-IN LOCATIONS AND OTHER FEATURES ARE APPROXIMATE AND SHOULD BE USED FOR INFORMATION PURPOSES ONLY. ACTUAL FIELD CONDITIONS MAY VARY AND SUBJECT TO CHANGE BASED ON FUTURE FILL OPERATIONS, WASTE PLACEMENT, TOPOGRAPHIC FEATURES, AND AS-BUILT SITE-SPECIFIC FACTORS.
 4. EXISTING GCCS AS-OTHER DATE JUNE 04, 2025.

Thirty Day Maximum Vertical Temperature Map from Temperature Probes at Chiquita Landfill

Solid Waste Borehole Maximum
Temperature Profiles Over 6 Weeks
for 3/27/2025 to 5/7/2025

SCS ENGINEERS

07224053.00 | May 8, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From May 1, 2025, through May 7, 2025, there were three recorded temperature increases, and two temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-06
 - As stated in previous reports, during field investigation of TP-06, the thermocouples were evaluated and found to have had errors and failures since being brought back online from filling operations. Any temperature readings from the date that the thermocouples were brought back online were likely erroneous and any decreases or increases in temperatures were in error. The failed sensors were replaced and re-wired on April 4th. The maximum recorded temperature at TP-06 since the replacement and re-wiring remains 138°F. In addition, after a below grade evaluation of TP-06, the 2-inch casing was found to be bent which was causing the 100-foot thermocouple to no longer read temperatures. On April 23rd a new thermocouple was attempted to be installed but could not be advanced beyond 20 feet due to issues causing thermocouple not being able to be removed or re-installed beyond repairable depth. On April 29th field crews were able to reinsert the 100-foot thermocouple by removing all thermocouples and re-installing them together. Note that the vertical temperature profile for TP-06 will be corrected in future weeks when we have multiple weeks of correct data and no past data issues that throw off previous weeks graphs.
- TP-09
 - As stated in last week's report, the prior week of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery has been ordered and will be re-installed as soon as reasonably possible.
- TP-11
 - The 45-foot thermocouple showed a decrease in maximum temperature of 11°F from 152°F to 141°F from May 3rd to May 6th.

May 8, 2025

- TP-13
The 30-foot thermocouple showed an increase in maximum temperature of 39°F from 116°F to 155°F from May 5th to May 7th.
- TP-15
 - The 15-foot thermocouple showed a decrease in maximum temperature of 12°F from 174°F to 162°F from May 2nd to May 7th
 - The 30-foot thermocouple showed an increase in maximum temperature of 12°F from 182°F to 194°F from April 30th to May 7th.
- TP-19
 - The 30-foot thermocouple showed an increase in maximum temperature of 16°F from 139°F to 155°F from April 27th to May 4th.
- TP-29
 - TP-29 was accidentally struck by a vehicle on May 6th and was repaired the same day. However, the 15-foot thermocouple could not be reinstalled due to damage. A replacement thermocouple was installed on May 7th.

SCS ENGINEERS

07224053.00 | May 15, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From May 8, 2025, through May 14, 2025, there were two recorded temperature increases, and two temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-06
 - As stated in previous reports, during field investigation of TP-06, the thermocouples were evaluated and found to have had errors and failures since being brought back online from filling operations. Any temperature readings from the date that the thermocouples were brought back online were likely erroneous and any decreases or increases in temperatures were in error. The failed sensors were replaced and re-wired on April 4th. The maximum recorded temperature at TP-06 since the replacement and re-wiring remains 138°F. In addition, after a below grade evaluation of TP-06, the 2-inch casing was found to be bent which was causing the 100-foot thermocouple to no longer read temperatures. On April 23rd a new thermocouple was attempted to be installed but could not be advanced beyond 20 feet due to issues causing thermocouple not being able to be removed or re-installed beyond repairable depth. On April 29th field crews were able to reinsert the 100-foot thermocouple by removing all thermocouples and re-installing them together. The maximum recorded temperature for this reporting period was 132°F. Note that the vertical temperature profile for TP-06 will be corrected in future weeks when we have multiple weeks of correct data and no past data issues that throw off previous weeks' graphs.
- TP-09
 - As stated in last week's report, the prior week of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery has been ordered and will be re-installed as soon as reasonably possible.
- TP-14
 - The 15-foot thermocouple showed a decrease in maximum temperature of 11°F from 130°F to 119°F from May 6th to May 13th
- TP-15
 - The 15-foot thermocouple showed an increase in maximum temperature of 11°F from 162°F to 173°F from May 7th to May 14th
- TP-21
 - The 95-foot thermocouple showed a decrease in maximum temperature of 11°F from 233°F to 222°F from May 6th to May 12th
- TP-34
 - The 120-foot thermocouple showed an increase in maximum temperature of 12°F from 140°F to 152°F from May 6th to May 10th
- TP-29
 - TP-29 was accidentally struck by a vehicle on May 6th and was repaired the same day. However, the 15-foot thermocouple could not be reinstalled that day due to damage. A replacement thermocouple was installed the following day on May 7th.

From May 15, 2025, through May 21, 2025, there was one recorded temperature increase, and four temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-06
 - As stated in previous reports, during field investigation of TP-06, the thermocouples were evaluated and found to have had errors and failures since being brought back online from filling operations. Any temperature readings from the date that the thermocouples were brought back online were likely erroneous and any decreases or increases in temperatures were in error. The failed sensors were replaced and re-wired on April 4th. The maximum recorded temperature at TP-06 since the replacement and re-wiring remains 138°F. In addition, after a below grade evaluation of TP-06, the 2-inch casing was found to be bent which was causing the 100-foot thermocouple to no longer read temperatures. On April 23rd a new thermocouple was attempted to be installed but could not be advanced beyond 20 feet due to issues causing thermocouple not being able to be removed or re-installed beyond repairable depth. On April 29th field crews were able to reinsert the 100-foot thermocouple by removing all thermocouples and re-installing them together. The maximum recorded temperature for this reporting period was 133°F. Note that the vertical temperature profile for TP-06 will be corrected in future weeks when we have multiple weeks of correct data and no past data issues that throw off previous weeks' graphs.
- TP-09
 - As stated in previous weeks' reports, prior weeks of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery has been ordered and is expected to arrive by June 6th. It will be re-installed as soon as reasonably possible.
- TP-11
 - The 125-foot thermocouple showed a decrease in maximum temperature of 11°F from 174°F to 163°F from May 12th to May 17th
- TP-13
 - The 30-foot thermocouple showed a decrease in maximum temperature of 10°F from 155°F to 145°F from May 14th to May 21st.
- TP-14
 - The 15-foot thermocouple remained consistent with previous recorded temperatures.
- TP-21
 - The 60-foot thermocouple showed an increase in maximum temperature of 11°F from 189°F to 200°F from May 15th to May 16th
 - The 95-foot thermocouple showed a decrease in maximum temperature of 12°F from 222°F to 210°F from May 12th to May 17th
 - The 110-foot thermocouple showed a decrease in maximum temperature of 39°F from 251°F to 212°F from May 14th to May 21st.
- TP-34
 - The 120-foot thermocouple remained consistent with previous recorded temperatures.

From May 22, 2025, through May 28, 2025, there were four recorded temperature increases, and three temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-06
 - As stated in previous reports, during field investigation of TP-06, the thermocouples were evaluated and found to have had errors and failures since being brought back online from filling operations. Any temperature readings from the date that the thermocouples were brought back online were likely erroneous and any decreases or increases in temperatures were in error. The failed sensors were replaced and re-wired on April 4th. The maximum recorded temperature at TP-06 since the replacement and re-wiring remains 138°F. In addition, after a below grade evaluation of TP-06, the 2-inch casing was found to be bent which was causing the 100-foot thermocouple to no longer read temperatures. On April 23rd a new thermocouple was attempted to be installed but could not be advanced beyond 20 feet due to issues causing thermocouple not being able to be removed or re-installed beyond repairable depth. On April 29th field crews were able to reinsert the 100-foot thermocouple by removing all thermocouples and re-installing them together. The maximum recorded temperature for this reporting period was 133°F. Note that the vertical temperature profile for TP-06 will be corrected in future weeks when we have multiple weeks of correct data and no past data issues that throw off previous weeks' graphs.
- TP-09
 - As stated in previous weeks' reports, prior weeks of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery was installed on May 23rd ahead of schedule and TP-09 is now online and recording data. There have been no significant temperature changes since TP-09 went offline.
- TP-11
 - The 45-foot thermocouple showed an increase in maximum temperature of 18°F from 140°F to 158°F from May 21st to May 28th
- TP-14
 - The 15-foot thermocouple showed an increase in maximum temperature of 13°F from 115°F to 128°F from May 20th to May 26th
- TP-21
 - The 45-foot thermocouple showed a decrease in maximum temperature of 10°F from 168°F to 158°F from May 20th to May 27th
 - The 60-foot thermocouple showed a decrease in maximum temperature of 19°F from 197°F to 178°F from May 19th to May 26th
 - The 70-foot thermocouple showed a decrease in maximum temperature of 18°F from 209°F to 191°F from May 20th to May 25th, and then an increase in maximum temperature of 16°F from 191°F to 207°F from May 25th to May 28th
 - The 95-foot thermocouple showed an increase in maximum temperature of 17°F from 210°F to 227°F from May 17th to May 24th

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 4/24/2025 to 6/4/2025

From May 29, 2025, through June 4, 2025, there were three recorded temperature increases, and two temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-09
 - As stated in previous weeks' reports, prior weeks of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery was installed on May 23rd ahead of schedule and TP-09 is now online and recording data. There have been no significant temperature changes since TP-09 went offline.
- TP-11
 - The 15-foot thermocouple showed a decrease in maximum temperature of 12°F from 150°F to 138°F from May 29th to June 3rd.
 - The 30-foot thermocouple showed an increase in maximum temperature of 16°F from 148°F to 164°F from May 27th to June 3rd.
- TP-14
 - The 15-foot thermocouple remained consistent with previous recorded temperatures.
- TP-21
 - The 45-foot thermocouple showed an increase in maximum temperature of 12°F from 158°F to 170°F from May 28th to June 2nd.
 - The 60-foot thermocouple showed an increase in maximum temperature of 20°F from 178°F to 198°F from May 26th to May 31st.
 - The 95-foot thermocouple showed a decrease in maximum temperature of 16°F from 227°F to 211°F from May 26th to June 2nd.

Subject: Monthly Reaction Committee Determination on Reaction Area Boundary
Chiquita Canyon Landfill – Castaic, California

Dear Mr. Chen:

In accordance with Condition Nos. 9a and 9b of the Modified Stipulated Order for Abatement (SOFA) pertaining to the Chiquita Canyon Landfill (Landfill or Facility) (Case No. 6177-4), the Reaction Committee has reviewed newly acquired applicable data recorded during the month of May 2025, considered revisions of the estimated extent of elevated temperature landfill (ETLF) conditions exhibited at the subject Facility (referred to as the “Reaction Area” limits), and has prepared this determination on potentially revising the Reaction Area map.

Attachment A presents the Drawing, titled “Reaction Area Map”, prepared by SCS Engineers (SCS) and dated 6/10/25. The Drawing depicts the Reaction Area boundary as prescribed in Condition No. 9a, which corresponds to the limits of Cells 1/2A, 2B/3, 4, and Module 2B/3/4 P2, as a solid black line. The Drawing also depicts the estimated extent of ETLF conditions being experienced at the site based on the Reaction Committee’s review of scientific data as a dashed magenta line. The rationale that serves as the basis for considering adjustments and modifications to the Reaction Area boundary (or the determination to maintain the decreed boundary), include the following:

- Landfill Gas (LFG) wellhead temperatures in excess of approximately 160 degrees Fahrenheit.
- Poor gas quality (defined as methane levels of less than 30 percent) in conjunction with methane-to-carbon dioxide (CH₄:CO₂) ratios less than 1.0.
- The concentration of hydrogen (H₂) in the LFG measured greater than 2 percent by volume.
- The concentration of carbon monoxide (CO) in the LFG measured greater than 2,000 ppm.
- Accelerated settlement of the landfill surface, defined as approximately 18 inches or greater within a 60-day period, and cracks in landfill cover. This corresponds to a strain value (i.e., settlement rate) rate of 3 percent per year for areas with a 300-foot waste column depth, which we believe is a reasonable average depth in the subject area of interest.
- First-hand observations of Landfill and/or SCS engineering, construction, and operations and maintenance (O&M) field personnel who are on-site related to: 1) atypical excess leachate quantities (presence and quantity of liquids); 2) instances of pressurized liquids emitting from the landfill surface, from boreholes during drilling, and from LFG wells; and, 3) the characteristics of the odors originating from the select areas of the waste footprint (often

described as “chemical-like” and distinctly different from typical LFG or landfill working face odors).

- Observations of subsurface waste conditions and characteristics as noted on borehole drilling logs for recently installed new wells and/or probes.
- Subsurface temperatures recorded at the in-situ waste temperature probes during May 2025.
- Temperature of gas or liquids measured at depth within the LFG well riser pipe (using an automated transmitter or manual field instrumentation).
- Since drilling activities for new LFG extraction wells recommenced during May 2025, there was relevant data related to subsurface temperature and pressures associated with drilling.

CONSIDERATIONS FOR POTENTIAL ADJUSTMENTS TO THE ESTIMATED EXTENT OF ETLF CONDITIONS (DASHED MAGENTA LINE)

In making its monthly determinations, the Reaction Committee evaluates the above set of data parameters, in conjunction with one another, to identify meaningful trends indicating ETLF conditions, as opposed to fluctuations exhibited in isolated datapoints.

Each month, the Reaction Committee scrutinizes particular areas of the Landfill that have previously exhibited abnormal or fluctuating data, when applicable. As discussed below, the Committee has determined there to be sufficient data to adjust the boundary to incorporate four distinct areas immediately adjacent (southeast) to the boundary as determined in the previous monthly exercise. This adjustment includes five LFG extraction wells based on trends demonstrated within the May 2025 data and the past several months of data.

Near CV-24062

Well CV-24062 is positioned within 50 feet or so of the previously delineated boundary line. Refer to previous monthly determination documentation prepared for the February and March data for detailed background information on conditions observed at this well earlier in 2025. During May the LFG wellhead temperature was recorded on multiple instances and exhibited temperatures of 170 to 185 degrees Fahrenheit (F), which is an increase compared to the average values measured during the previous three months. While the well exhibited an average methane concentration of 22 percent during April and May, it recorded significantly lower values in early May, which resulted in a decrease in the methane-to-carbon dioxide ratio. The hydrogen content measured during the May sampling event demonstrated a significant increase compared to the values recorded during the previous three months. Furthermore, the maximum carbon monoxide value measured in May was notably higher than the average value recorded during the previous five months.

The well is in close proximity to legacy deep horizontal collectors that extend from the north (within the previously delineated Reaction Area) to the south, which signals the potential that these ETLF characteristics being observed at well CV-24062 may be attributable to migration of heat, gas, and leachate from within the existing Reaction Area, as delineated during the prior month, through these horizontal collectors. However, recognizing that ETLF conditions may be present in the waste

materials surrounding this well, which is a relatively short distance to the southeast, the Reaction Committee believes it is prudent to institute this slight adjustment of this data-driven boundary. The Reaction Committee does not believe that the 50-foot adjustment to the estimated extent of ETLF conditions in this discrete location necessarily signals a substantial expansion of the subsurface reaction being experienced in the northwest portion of the Landfill, since the area being incorporated measures less than a half-acre. This is confirmed by the fact that the thermocouples at TP-13, which is positioned about 100 feet to the east, are only approximately 160 degrees F at 140 feet deep. Also, nearby wells CV-24073 and CV-24151 recorded peak methane concentrations of 46% and 54%, respectively, with average wellhead temperatures of 140°F and 103°F during April and May, which are not representative of ETLF conditions.

Near CV-24063

Well CV-24063 is positioned within 100 feet or so of the previously delineated boundary line. During May the LFG wellhead temperature was recorded on multiple instances and exhibited temperatures of 161 to 163 degrees F on four occasions, which is an increase compared to the average values measured during the previous three months. The downwell temperature as measured by the Lorentz pump sensor was in the 175 to 180 degrees F range, so it is notably warmer down into the well casing. The well exhibited an average methane concentration of 27 percent during April and May, and demonstrated a decreasing trend in the methane-to-carbon dioxide ratio, which was 0.3 during monitoring conducted in May. The hydrogen content measured during the May sampling event demonstrated a significant increase compared to the values recorded during the previous three months. Although the average carbon monoxide value measured during April and May was below 2,000 ppm, it continued to be elevated compared to the range expected in typical LFG.

The well is in close proximity to legacy deep horizontal collectors that extend from the north (within the previously delineated Reaction Area) to the south, which signals the potential that these ETLF characteristics being observed at well CV-24063 may be attributable to migration of heat, gas, and leachate from within the existing Reaction Area, as delineated during the prior month, through these horizontal collectors. However, recognizing that ETLF conditions may be present in the waste materials surrounding this well, which is a relatively short distance to the south, the Reaction Committee believes it is prudent to institute this slight adjustment of this data-driven boundary. The Reaction Committee does not believe that the 100-foot adjustment to the estimated extent of ETLF conditions in this discrete location necessarily signals a substantial expansion of the subsurface reaction being experienced in the northwest portion of the Landfill, since the area being incorporated measures less than a half-acre. This is confirmed by the fact that the nearby wells CV-24074 and CV-24149 recorded peak methane concentrations of 49% and 42%, respectively, with average wellhead temperatures of 89°F and 109°F during April and May, which are not representative of ETLF conditions.

Near CV-24064

Well CV-24064 is positioned within 75 feet or so of the previously delineated boundary line. During May the LFG wellhead temperature was recorded on multiple instances and exhibited temperatures of 159 to 173 degrees F, which is an increase compared to the average values measured during the previous four months. The average methane concentration measured in May continued to be atypically low and the well demonstrated a decreasing trend in the methane-to-carbon dioxide ratio, which was 0.13 during monitoring conducted in May. The hydrogen content measured during the May sampling event demonstrated a significant increase compared to the values recorded in early

2025. The average carbon monoxide value measured during April and May was greater than 2,000 ppm.

The well is in close proximity to two legacy deep horizontal collectors, one of which extends from the west (within the previously delineated Reaction Area) to the east, which signals the potential that these ETLF characteristics being observed at well CV-24064 may be attributable to migration of heat, gas, and leachate from within the existing Reaction Area, as delineated during the prior month, through the horizontal collector. However, recognizing that ETLF conditions may be present in the waste materials surrounding this well, which is a relatively short distance to the east, the Reaction Committee believes it is prudent to institute this slight adjustment of this data-driven boundary. The Reaction Committee does not believe that the 75-foot adjustment to the estimated extent of ETLF conditions in this discrete location necessarily signals a substantial expansion of the subsurface reaction being experienced in the northwest portion of the Landfill, since the area being incorporated measures less than a half-acre.

Near CV-24083

Well CV-24083 is positioned within 150 feet or so of the previously delineated boundary line. Refer to previous monthly determination documentation prepared for the March and April data for detailed background information on conditions observed at this well earlier in 2025. During May the LFG wellhead temperature was recorded on multiple instances and exhibited temperatures of 168 degrees F in early May before dramatically cooling to the 137 to 141 F range later in the month. The maximum temperature in April was 169 F. The downwell temperature as measured by the Lorentz pump sensor was in the range of 180 to 190 degrees F, so it is notably warmer down into the well. While the well is obviously collecting some methane because the average methane concentration was 29 percent during April and May, it did periodically exhibit values below 20% during this time period, which resulted in a decrease in the methane-to-carbon dioxide ratio. The hydrogen content measured during the May sampling event demonstrated a significant increase compared to the values recorded during the previous two months. Although the average carbon monoxide value measured during April and May was below 2,000 ppm, it had increased compared to measurements recorded during prior months.

The well is in close proximity to legacy deep horizontal collectors that extend from north and west (within the previously delineated Reaction Area) to the south and east, which signals the potential that these ETLF characteristics being observed at well CV-24083 may be attributable to migration of heat, gas, and leachate from within the existing Reaction Area, as delineated during the prior month, through these horizontal collectors. However, recognizing that ETLF conditions may be present in the waste materials surrounding this well, which is a relatively short distance to the southeast, the Reaction Committee believes it is prudent to institute this slight adjustment of this data-driven boundary. The Reaction Committee does not believe that the 150-foot adjustment to the estimated extent of ETLF conditions in this discrete location necessarily signals a substantial expansion of the subsurface reaction being experienced in the northwest portion of the Landfill, since the area being incorporated measures less than an acre. This is confirmed by the fact that the conditions at nearby wells CV-24070 and CV-24071 do not necessarily indicate ETLF conditions, with the Lorentz pump in CV-24070 recording an average downwell temperature of only 153 F.

Near CV-24084 & TP-11

Well CV-24084 is co-located with TP-11 in a common borehole and is positioned within 175 feet or so of the previously delineated boundary line. Refer to previous monthly determination documentation prepared for the March and April data for detailed background information on conditions observed at this well earlier in 2025. During May the LFG wellhead temperature was recorded on multiple instances and exhibited temperatures of less than 155 degrees F all but one time, which was 163.5 F. The average wellhead temperature during the past 2 months of 149 F is not particularly hot for an ETLF. The thermocouples at co-located TP-11, have been steadily increasing since late 2024, when they were around 140 F, and now are approximately 173 degrees F at 100 feet deep. The lower depth intervals have increased by about 30 degrees over the past several months.

The well exhibited a methane-to-carbon dioxide ratio of 0.52 based on the May monitoring events. The hydrogen content measured during the last sampling event was greater than 7 percent. The average carbon monoxide value measured during April and May was greater than 2,000 ppm.

The well is in close proximity to legacy deep horizontal collectors that extend from west (within the previously delineated Reaction Area) to the east, which signals the potential that these ETLF characteristics being observed at well CV-24084 may be attributable to migration of heat, gas, and leachate from within the existing Reaction Area, as delineated during the prior month, through these horizontal collectors. However, recognizing that ETLF conditions may be present in the waste materials surrounding this well, which is a relatively short distance to the southeast, the Reaction Committee believes it is prudent to institute this slight adjustment of this data-driven boundary. The Reaction Committee does not believe that the 175-foot adjustment to the estimated extent of ETLF conditions in this discrete location necessarily signals a substantial expansion of the subsurface reaction being experienced in the northwest portion of the Landfill, since the area being incorporated measures less than one acre. This is confirmed by the fact that nearby wells CV-24070 and CV-24071, both of which are closer to the previously delineated Reaction Area, do not necessarily indicate ETLF conditions, with the Lorentz pump in CV-24071 recording an average downwell temperature of only 162 F.

TEMPERATURE MONITORING PROBE DATA

The Reaction Committee reviewed the temperature measurements recorded during April 2025 by the in-situ temperature monitoring probes. As of May 2025, five (5) of the thirty-two (32) probes (TP-2, 3, 9, 15, and 21) are located within the current estimated extent of ETLF conditions (dashed magenta line). Of the remaining twenty-seven (27) probes positioned outside of the boundary, twelve (12) probes are positioned within relatively close proximity (within 200 feet) of this boundary. It is the Committee's opinion that the temperatures recorded by the 26 probes outside of the boundary during May 2025 (excludes TP-11) are not indicative of a subsurface reaction and do not substantiate a decision to adjust the boundary of the Reaction Area at this time.

The Reaction Committee evaluated the 30-day maximum temperatures recorded in TP-26, TP-29, TP-30, and TP-31. The Committee noted differentiation between the 30-day maximum temperatures in these four probes compared to the 30-day maximum temperatures measured at the three probes within the current estimated extent of ETLF conditions (dashed magenta line), specifically TP-3, TP-9,

and TP-21. Based on this differentiation, along with consideration of the other relevant criteria and data parameters, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of TP-26, TP-29, TP-30, and TP-31 is warranted at this time.

HYDROGEN CONCENTRATIONS

The Reaction Committee also evaluated the concentration of hydrogen in LFG during May 2025. Recall that certain wells positioned to the south and east of the Reaction Area boundary (where dewatering pumping was reactivated) have periodically demonstrated some increased hydrogen content in the LFG during the Reaction Committee's review of the data in previous months, which similarly was the case for the May data. The Reaction Committee noted in its review of the data that these wells did not exhibit elevated temperatures. There was no evidence of the increased heat that is typical with ETLF conditions present at the wells exhibiting atypical hydrogen concentrations. As noted previously, the Committee suspects this increased hydrogen content may be attributable to substantial dewatering being accomplished throughout the Reaction Area and may be associated with gas movement from within the Reaction Area by existing horizontal collectors in close proximity. Thus, the presence of elevated hydrogen in these isolated locations does not suggest that ETLF conditions are expanding south and east of the delineated boundary. Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area, other than those adjustments noted above, is warranted at this time.

CONCLUSION

As presented on the Drawing included as **Attachment A**, the estimated extent of ETLF conditions (dashed magenta line) is fully contained within the Reaction Area boundary decreed in the SOFA (solid black line). Because the ETLF conditions are fully contained within the Reaction Area boundary and have not expanded into a new cell, the Reaction Committee finds no basis to modify the Reaction Area boundary as prescribed in Condition 9a at this time.

There was no dissenting opinion among the Reaction Committee members regarding this monthly determination. Supporting data is presented on the Drawing included as **Attachment A**. The maximum temperature measurements recorded at the 32 in-situ waste temperature monitoring probes during May are presented in **Attachment B** in graphical format. The LFG wellhead temperatures recorded at the extraction wells for the entire Landfill footprint are reflected on the isothermal gradient range map presented as **Attachment C**. The carbon monoxide (CO) concentrations measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment D**. The electronic database and recordkeeping platform enables these measurements to be downloaded into a tabular spreadsheet format, which can be submitted to the South Coast Air Quality Management District under separate cover, if requested.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 4/24/2025 to 6/4/2025

From May 29, 2025, through June 4, 2025, there were three recorded temperature increases, and two temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-09
 - As stated in previous weeks' reports, prior weeks of readings at TP-09 showed no variability and upon field investigation, the battery for TP-09 was found to have failed likely due to poor cell network connection rapidly draining the battery. A new battery was installed on May 23rd ahead of schedule and TP-09 is now online and recording data. There have been no significant temperature changes since TP-09 went offline.
- TP-11
 - The 15-foot thermocouple showed a decrease in maximum temperature of 12°F from 150°F to 138°F from May 29th to June 3rd.
 - The 30-foot thermocouple showed an increase in maximum temperature of 16°F from 148°F to 164°F from May 27th to June 3rd.
- TP-14
 - The 15-foot thermocouple remained consistent with previous recorded temperatures.
- TP-21
 - The 45-foot thermocouple showed an increase in maximum temperature of 12°F from 158°F to 170°F from May 28th to June 2nd.
 - The 60-foot thermocouple showed an increase in maximum temperature of 20°F from 178°F to 198°F from May 26th to May 31st.
 - The 95-foot thermocouple showed a decrease in maximum temperature of 16°F from 227°F to 211°F from May 26th to June 2nd.

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-7

Maximum data for 4/24/2025 to 6/4/2025

4/24/25-5/1/25 5/1/25-5/8/25 5/8/25-5/15/25 5/15/25-5/22/25 5/22/25-5/29/25 5/30/25-6/4/25

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-8

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-9

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-10

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-11

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-12

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-13

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-14

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-15

Maximum data for 4/24/2025 to 6/4/2025

4/24/25-5/1/25 5/1/25-5/8/25 5/8/25-5/15/25 5/15/25-5/22/25 5/22/25-5/29/25 5/30/25-6/4/25

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-16

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-17

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-18

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-19

Maximum data for 4/24/2025 to 6/4/2025

4/24/25-5/1/25 5/1/25-5/8/25 5/8/25-5/15/25 5/15/25-5/22/25 5/22/25-5/29/25 5/30/25-6/4/25

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-20

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-21

Maximum data for 4/24/2025 to 6/4/2025

4/24/25-5/1/25 5/1/25-5/8/25 5/8/25-5/15/25 5/15/25-5/22/25 5/22/25-5/29/25 5/30/25-6/4/25

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-24

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-25

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-26

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-27

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-28

Maximum data for 4/24/2025 to 6/4/2025

4/24/25-5/1/25 5/1/25-5/8/25 5/8/25-5/15/25 5/15/25-5/22/25 5/22/25-5/29/25 5/30/25-6/4/25

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-29

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-30

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-31

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-32

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-34

Maximum data for 4/24/2025 to 6/4/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-35

Maximum data for 4/24/2025 to 6/4/2025
