Dear Mr. Habaradas,

In accordance with the LEA's June 6, 2024 Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from June 19, 2025, through July 30, 2025, with a map of the maximum temperatures recorded in the past week and the below narrative on recorded temperature data. We included a separate map demonstrating the locations of the 32 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD.

Chiquita notified the LEA in its May 29, 2025 submittal that the temperature color coding used in the map of maximum recorded temperatures was revised to show more evenly segmented temperature ranges. Chiquita had understood from the LEA's May 29, 2024 letter that the color coding illustrated in that letter was intended as an example. In response to the LEA's email dated May 30, 2025, on June 9, 2025, Chiquita submitted an updated map of maximum recorded temperatures from the May 29-June 4, 2024 time period and an updated version of the map submitted on May 29, 2025, using the former color coding. Moving forward, the temperature color coding has been reverted to the former color coding until further discussion.

From July 24, 2025, through July 30, 2025, there was one recorded temperature decrease and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- \* TP-03
  - \* The 30-foot thermocouple remained consistent with previous recorded temperatures.

- \* TP-11
  - \* The 45-foot thermocouple showed a decrease in maximum temperature of 12°F from 165°F to 153°F from July 21st to July 29th,
- \* TP-15
  - \* The 30-foot thermocouple showed an increase in maximum temperature of 10°F from 172°F to 182°F from July 23rd to July 24.
  - \* The 45-foot thermocouple remained consistent with previous recorded temperatures.
  - \* The 75-foot thermocouple remained consistent with previous recorded temperatures.
- \* TP-16
  - \* The 45-foot thermocouple remained consistent with previous recorded temperatures. As noted in previous submittals, the 45-foot thermocouple showed an anomalous reading on June 22nd of 222°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-16 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no other sensors showed an anomaly, outlier, data gap, or malfunction, as discussed above. In the past week there was no other recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than 20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024 and October 4, 2024 adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024 response that was used as a basis for the LEA's October 4, 2024 letter.

We will continue to update the LEA weekly on the TMP readings and to notify the LEA by email within 48 hours of any recorded temperature change in the TMP field of greater than 20°F within 24 hours or less.
