Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528030 Project No: SW - SUBCHAPTER N Location: Chiquita Canyon Landfill - Subchapter N Date Received: 03/05/25

This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/05/25. The samples were received cold and intact. All discrepancies listed on the attached Login Checklist and the attached email were addressed by CTEH Field staff by phone - including, use of full sample location names, e.g., South Basin - Eastern Inlet, and that the sample collection times listed on the COC are correct. Headspace was noted in some of the VOA vials, but there are vials without headspace that can/will be used for analysis. See the email attached to the COC.

Semivolatile Organics by GC/MS (EPA 625.1):

- SOUTH BASIN - EASTERN INLET (lab # 528030-002) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Metals (EPA 200.8):

- Low recoveries were observed for arsenic and chromium in the MS/MSD for batch 365105; the parent sample was not a project sample, the LCS was within limits, and the associated RPDs were within limits.
- No other analytical problems were encountered.

Biochemical Oxygen Demand (SM5210B):

No analytical problems were encountered.

Ammonia and TKN- Semi-Automated Method (SM 4500-NH3-G):

No analytical problems were encountered.

Hello Guys - discrepancies between bottle labels and COC noted in the email from our Login Group below. My comments added to help answer the discrepancies. Please reply accordingly as soon as you can. Some of these discrepancies will carry over to our subcontract COCs - and we need to follow up with the Sub-Labs ASAP to ensure they have accurate sample time and ID information so our data is aligned for reporting.

Thanks!

Hi Zach,

Please review the login for these jobs. The following discrepancies were noted on the following:

1. All samples for all LRs have collection time @1100 for South Basin - Western Inlet and @1130 for South Basin - Eastern Inlet, coc listed as @1040 for Western Inlet and @1100 for Eastern Inlet. Which are correct - sample bottles or COC?

2. Sample ID discrepancy for LR #528029 - SOUTH for -001 and EAST for -002 per coc, South Basin - Western Inlet and South Basin - Eastern Inlet per label. Discrepancy on sampling time as

mentioned on item no. 1. Shall we be consistent in naming samples (3 of 4 COCs, and all bottles using the longer IDs)?

3. Received 4 containers each for LR # 528030, coc listed as 5 containers. Will let you all know if we run into any problems with sample volume for testing.

4. Received 16 containers for LR #528033, coc listed as 17 containers. Will let you all know if we run into any problems with sample volume for testing.

5. Headspace >6 mm in 3/5 vials of 528033-002 and 1/5 vials of 528029-002. Will comment in the case narrative if and as necessary.

Also, please let us know when the sub-coc for 528029 and 528033 are ready.

Hey All - samples were received, but not iced. Samples are fine for compliance reporting when received over temperature - *if* received on the day collected *and* with evidence of cooling (on ice, temperature dropping).

We can proceed, but need your go ahead to analyze and report with appropriate case narrative comments.

This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/05/25. The samples were received cold and intact. All discrepancies listed on the attached Login Checklist and the attached email were addressed by CTEH Field staff by phone - including, use of full sample location names, e.g., South Basin - Eastern Inlet, and that the sample collection times listed on the COC are correct. Headspace was noted in some of the VOA vials, but there are vials without headspace that can/will be used for analysis. See the email attached to the COC.

Metals (EPA 200.7):

- Iron was detected above the RL in the method blank for batch 365124; this analyte was detected in samples at a level at least 10 times that of the blank.
- No other analytical problems were encountered.

Ion Chromatography (EPA 300.0):

- Responses exceeding the instrument's linear range were observed for chloride in the MS/MSD for batch 365073; affected data was qualified with "E".
- No other analytical problems were encountered.

Total Oil & Grease (HEM) (EPA 1664A):

- Matrix spikes were not performed for this analysis due to insufficient sample volume.
- No analytical problems were encountered.

Total Suspended Solids (TSS) (SM2540D):
No analytical problems were encountered.

Coliform - 9221 Tests (SM 9221B and SM 9221F):
No analytical problems were encountered.

Hello Guys - discrepancies between bottle labels and COC noted in the email from our Login Group below. My comments added to help answer the discrepancies. Please reply accordingly as soon as you can. Some of these discrepancies will carry over to our subcontract COCs - and we need to follow up with the Sub-Labs ASAP to ensure they have accurate sample time and ID information so our data is aligned for reporting.

Thanks!

Hi Zach,

Please review the login for these jobs. The following discrepancies were noted on the following:

1. All samples for all LRs have collection time @1100 for South Basin - Western Inlet and @1130 for South Basin - Eastern Inlet, coc listed as @1040 for Western Inlet and @1100 for Eastern Inlet. Which are correct - sample bottles or COC?

2. Sample ID discrepancy for LR #528029 - SOUTH for -001 and EAST for -002 per coc, South Basin - Western Inlet and South Basin - Eastern Inlet per label. Discrepancy on sampling time as

mentioned on item no. 1. Shall we be consistent in naming samples (3 of 4 COCs, and all bottles using the longer IDs)?

3. Received 4 containers each for LR # 528030, coc listed as 5 containers. Will let you all know if we run into any problems with sample volume for testing.

4. Received 16 containers for LR #528033, coc listed as 17 containers. Will let you all know if we run into any problems with sample volume for testing.

5. Headspace >6 mm in 3/5 vials of 528033-002 and 1/5 vials of 528029-002. Will comment in the case narrative if and as necessary.

Also, please let us know when the sub-coc for 528029 and 528033 are ready.

Hey All - samples were received, but not iced. Samples are fine for compliance reporting when received over temperature - *if* received on the day collected *and* with evidence of cooling (on ice, temperature dropping).

We can proceed, but need your go ahead to analyze and report with appropriate case narrative comments.

Thanks!

Case Narrative

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528033 Project No: SW - APPENDIX II Location: Chiquita Canyon Landfill - Appendix II Parameters Date Received: 03/05/25

- This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/05/25. The samples were received cold and intact. All discrepancies listed on the attached Login Checklist and the attached email were addressed by CTEH Field staff by phone - including, use of full sample location names, e.g., South Basin - Eastern Inlet, and that the sample collection times listed on the COC are correct. Headspace was noted in some of the VOA vials, but there are vials without headspace that can/will be used for analysis. See the email attached to the COC.
- This report was revised on 03/24/25 to include subcontracted 8141 and 8290 data.

Volatile Organics by GC/MS (EPA 8260B):

- SOUTH BASIN - WESTERN INLET (lab # 528033-001) and SOUTH BASIN - EASTERN INLET (lab # 528033-002) had pH greater than 2.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):

- Bis(2-ethylhexyl)phthalate was detected between the MDL and the RL in the method blank for batch 365181; this analyte was not detected in samples at or above the RL.
- SOUTH BASIN - EASTERN INLET (lab # 528033-002) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

- SOUTH BASIN - EASTERN INLET (lab # 528033-002) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Pesticides (EPA 8081A):

- SOUTH BASIN - EASTERN INLET (lab # 528033-002) was diluted due to the color of the sample extract.
- No other analytical problems were encountered.

PCBs (EPA 8082):

- SOUTH BASIN - EASTERN INLET (lab # 528033-002) was treated with sulfuric acid to reduce analytical interferences or due to the presence of color.
- SOUTH BASIN - EASTERN INLET (lab # 528033-002) was diluted due to the color of the sample extract.
- No other analytical problems were encountered.

Metals (EPA 200.8 and EPA 245.1):

- High response was observed for antimony in the ICV analyzed 03/06/25 12:33; this analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b".
- High response was observed for antimony in the CCV analyzed 03/06/25 18:16; affected data was qualified with "b".
- High recovery was observed for antimony in the LCS for batch 365105; this analyte was not detected at or above the RL in the associated samples.
- Low recoveries were observed for many analytes in the MS/MSD of SOUTH BASIN - EASTERN INLET (lab # 528033-002); the associated RPDs were within limits.
- Tin was detected between the MDL and the RL in the method blank for batch 365105; this analyte was not detected in samples at or above the RL.
- No other analytical problems were encountered.

Total Phenolics (EPA 420.1):
No analytical problems were encountered.

Sulfide (SM 4500-S2-D):
No analytical problems were encountered.

Cyanide - Semi-Automated Method (SM 4500-CN-E and SM 4500-CN-E):
No analytical problems were encountered.

Organophosphorus Pesticides (EPA 8141A):
Pace Laboratories in Bakersfield, CA performed the analysis (see sublab report section for certifications). Please see the Pace Laboratories case narrative.

Hello Guys - discrepancies between bottle labels and COC noted in the email from our Login Group below. My comments added to help answer the discrepancies. Please reply accordingly as soon as you can. Some of these discrepancies will carry over to our subcontract COCs - and we need to follow up with the Sub-Labs ASAP to ensure they have accurate sample time and ID information so our data is aligned for reporting.

Thanks!

Hi Zach,

Please review the login for these jobs. The following discrepancies were noted on the following:

1. All samples for all LRs have collection time @1100 for South Basin - Western Inlet and @1130 for South Basin - Eastern Inlet, coc listed as @1040 for Western Inlet and @1100 for Eastern Inlet. Which are correct - sample bottles or COC?

2. Sample ID discrepancy for LR #528029 - SOUTH for -001 and EAST for -002 per coc, South Basin - Western Inlet and South Basin - Eastern Inlet per label. Discrepancy on sampling time as

mentioned on item no. 1. Shall we be consistent in naming samples (3 of 4 COCs, and all bottles using the longer IDs)?

3. Received 4 containers each for LR # 528030, coc listed as 5 containers. Will let you all know if we run into any problems with sample volume for testing.

4. Received 16 containers for LR #528033, coc listed as 17 containers. Will let you all know if we run into any problems with sample volume for testing.

5. Headspace >6 mm in 3/5 vials of 528033-002 and 1/5 vials of 528029-002. Will comment in the case narrative if and as necessary.

Also, please let us know when the sub-coc for 528029 and 528033 are ready.

Hey All - samples were received, but not iced. Samples are fine for compliance reporting when received over temperature - *if* received on the day collected *and* with evidence of cooling (on ice, temperature dropping).

We can proceed, but need your go ahead to analyze and report with appropriate case narrative comments.

RE: Project: 528033
Pace Project No.: 30763889

Dear Zach Barker:

Enclosed are the analytical results for sample(s) received by the laboratory on March 08, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

The samples will be subcontracted to Pace Bakersfield for analysis. Results of the analysis are reported on the Pace Bakersfield data tables.

If you have any questions concerning this report, please feel free to contact me.

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2503375

Project: EO-528033

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Project: EO-528033

SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Enthalpy Analytical - El Dorado Hills
Work Order No. 2503065

Mr. Zach Barker
Enthalpy Analytical
931 W. Barkley Avenue
Orange, CA 92868

Dear Mr. Barker,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on March 07, 2025 under your Project Name 'EO-528033'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mark.rein@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Mark Rein
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH .

Enthalpy Analytical - EDH Work Order No. 2503065
Case Narrative

Sample Condition on Receipt:

Two water samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements.

Analytical Notes:

EPA Method 8290A

The samples were extracted and analyzed for 2,3,7,8-tetra chlorinated dioxins by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected above the sample quantitation limits in the Method Blank. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier. The responses of the internal standards with low recoveries were greater than 10:1 signal-to-noise, which is the limit generally considered acceptable for accurate quantitation by isotope dilution analysis.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
EDL	Estimated Detection Limit
EMPC	Estimated Maximum Possible Concentration
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses ½ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)

- This data package contains sample and QC results for one water sample, requested for the above referenced project on 03/07/25. The sample was received cold and intact.
- This report was revised on 03/31/25 to include subcontracted 8290 TCDD data.

Volatile Organics by GC/MS (EPA 8260B):

- A number of analytes were detected between the MDL and the RL in the method blank for batch 365377; these analytes were not detected in the sample at or above the RL.
- Naphthalene was detected between the MDL and the RL in the method blank for batch 365396; this analyte was not detected in the sample at or above the RL.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):

- Bis(2-ethylhexyl)phthalate was detected between the MDL and the RL in the method blank for batch 365181; this analyte was not detected in the sample at or above the RL.
- SOUTH BASIN STAGE 1 (lab # 528317-001) was diluted due to the viscous nature of the sample extract.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 625.1):

- SOUTH BASIN STAGE 1 (lab # 528317-001) was diluted due to the viscous nature of the sample extract.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

No analytical problems were encountered.

Pesticides (EPA 8081A):

- SOUTH BASIN STAGE 1 (lab # 528317-001) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Total Organic Carbon by IR (SM 5310B):

No analytical problems were encountered.

PCBs (EPA 8082):

- High surrogate recovery was observed for decachlorobiphenyl (PCB) in SOUTH BASIN STAGE 1 (lab # 528317-001); no target analytes were detected in the sample.
- SOUTH BASIN STAGE 1 (lab # 528317-001) was treated with sulfuric acid to reduce analytical interferences or due to the presence of color.
- SOUTH BASIN STAGE 1 (lab # 528317-001) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Metals (EPA 200.7, EPA 200.8, and EPA 245.1):

- High recovery was observed for antimony in the LCS for batch 365317; this analyte was not detected at or above the RL in the associated sample.
- High recovery was observed for boron in the MS for batch 365317; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for boron in the MS/MSD for batch 365317.
- No other analytical problems were encountered.

Ion Chromatography (EPA 300.0):

- Low response was observed for fluoride in the CCV analyzed 03/08/25 13:34; affected data was qualified with "b".
- Low response was observed for fluoride in the CCV analyzed 03/08/25 16:14; affected data was qualified with "b".
- Low recoveries were observed for fluoride in the MS/MSD for batch 365263; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Conductivity (SM2510B):
No analytical problems were encountered.

Total Oil & Grease (HEM) (EPA 1664A):

- Matrix spikes were not performed for this analysis due to insufficient sample volume.
- No analytical problems were encountered.

Total Phenolics (EPA 420.1):
No analytical problems were encountered.

Alkalinity (SM2320B):
No analytical problems were encountered.

Sulfide (SM 4500-S2-D):
No analytical problems were encountered.

Total Dissolved Solids (TDS) (SM2540C):
No analytical problems were encountered.

Total Suspended Solids (TSS) (SM2540D):
No analytical problems were encountered.

Chemical Oxygen Demand (SM5220D):
No analytical problems were encountered.

Biochemical Oxygen Demand (SM5210B):
No analytical problems were encountered.

Turbidity (SM2130B):
No analytical problems were encountered.

Cyanide - Semi-Automated Method (SM 4500-CN-E and SM 4500-CN-E):
No analytical problems were encountered.

Coliform - 9221 Tests (SM 9221B and SM 9221F):
No analytical problems were encountered.

Ammonia and TKN- Semi-Automated Method (SM 4500-NH3-G):

- Responses exceeding the instrument's linear range were observed for ammonia-N in the MS/MSD for batch 366508; affected data was qualified with "E".
- No other analytical problems were encountered.

Organophosphorus Pesticides (EPA 8141A):
Pace Laboratories in Bakersfield, CA performed the analysis (see sublab report section for certifications). Please see the Pace Laboratories case narrative.

8151A Chlorinated Herbicides (EPA 8151A):
McCampbell Analytical, Inc. in Pittsburg, CA performed the analysis (NELAP certified). Please see the McCampbell Analytical, Inc. case narrative.

RSK-175 CO2 (RSK-175):
McCampbell Analytical, Inc. in Pittsburg, CA performed the analysis (see sublab report section for certifications). Please see the McCampbell Analytical, Inc. case narrative.

Dioxins & Furans (EPA 8290):
Enthalpy - El Dorado Hills in El Dorado Hills, CA performed the analysis (see sublab report section for certifications). Please see the Enthalpy - El Dorado Hills case narrative.

RE: Project: 528317
Pace Project No.: 30763654

Dear Zach Barker:

Enclosed are the analytical results for sample(s) received by the laboratory on March 11, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nikayla M. Yasurek

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2503675

Project: EO-528317

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Enthalpy Analytical - El Dorado Hills
Work Order No. 2503083

Mr. Zach Barker
Enthalpy Analytical
931 W. Barkley Avenue
Orange, CA 92868

Dear Mr. Barker,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on March 11, 2025 under your Project Name 'EO-528317'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mark.rein@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Mark Rein
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH .

Enthalpy Analytical - EDH Work Order No. 2503083
Case Narrative

Sample Condition on Receipt:

One water sample was received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The sample was received in good condition and within the method temperature requirements.

Analytical Notes:

EPA Method 8290A

The sample was extracted and analyzed for 2,3,7,8-tetra chlorinated dioxins by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria was met for this sample.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected above the sample quantitation limits in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528548 Project No: SW - IGP Location: Stormwater - IGP Date Received: 03/11/25

This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/11/25. The samples were received cold and intact.

Metals (EPA 200.7):
No analytical problems were encountered.

Ion Chromatography (EPA 300.0):

- Responses exceeding the instrument's linear range were observed for chloride in the MS/MSD for batch 365560; affected data was qualified with "E".
- No other analytical problems were encountered.

Total Oil & Grease (HEM) (EPA 1664A):

- Matrix spikes were not performed for this analysis due to insufficient sample volume. Due to high sediment content in the sample matrix of sample 528548-002, the liquid portion of the sample was transferred to a new container prior to analysis. The pH was greater than 2 at receipt and additional preservative was added to the sample at the lab to achieve a pH <2.
- No analytical problems were encountered.

Total Suspended Solids (TSS) (SM2540D):
No analytical problems were encountered.

Coliform - 9221 Tests (SM 9221B and SM 9221F):
No analytical problems were encountered.

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528547 Project No: SW - SUBCHAPTER N Location: SW - SUBCHAPTER N Date Received: 03/11/25

This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/11/25. The samples were received cold and intact.

Semivolatile Organics by GC/MS (EPA 625.1):

- SOUTH BASIN EAST INLET (lab # 528547-002) was diluted due to client history of high non-target or organic acid interference.
- No other analytical problems were encountered.

Metals (EPA 200.8):

- Chromium was detected between the MDL and the RL in the method blank for batch 365826; this analyte was detected in the sample at a level at least 10 times that of the blank.
- No other analytical problems were encountered.

Biochemical Oxygen Demand (SM5210B):
No analytical problems were encountered.

Ammonia and TKN- Semi-Automated Method (SM 4500-NH3-G):
No analytical problems were encountered.

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528550 Project No: SW - MPARS Location: SW - MPARS Date Received: 03/11/25

This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/11/25. The samples were received cold and intact.

Volatile Organics by GC/MS (EPA 8260B):

- Naphthalene was detected between the MDL and the RL in the method blank for batch 365765; this analyte was not detected in samples at or above the RL.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
No analytical problems were encountered.

Total Organic Carbon by IR (SM 5310B):
No analytical problems were encountered.

Metals (EPA 200.7 and EPA 200.8):

- Low recovery was observed for boron in the MSD for batch 365828; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for boron in the MS/MSD for batch 365828.
- Sodium was detected above the RL in the method blank for batch 365839; this analyte was detected in the sample at a level at least 10 times that of the blank.
- No other analytical problems were encountered.

Ion Chromatography (EPA 300.0):
No analytical problems were encountered.

Conductivity (SM2510B):
No analytical problems were encountered.

Alkalinity (SM2320B):
No analytical problems were encountered.

Sulfide (SM 4500-S2-D):
No analytical problems were encountered.

Total Dissolved Solids (TDS) (SM2540C):
No analytical problems were encountered.

Chemical Oxygen Demand (SM5220D):
No analytical problems were encountered.

Turbidity (SM2130B):
No analytical problems were encountered.

RSK-175 CO2 (RSK-175):
McCampbell Analytical, Inc. in Pittsburg, CA performed the analysis (see sublab report section for certifications). Please see the McCampbell Analytical, Inc. case narrative.

SAMPLE RECEIPT CHECKLIST

Section 1: General Info

Date Received: 3/11/25 WO# 528550 Client: Waste Connections

Section 2: Shipping / Custody **Are custody seals present?** ☐ Yes ☒ No

Custody seals intact on arrival? ■ N/A ☐ Yes ☐ No ☐ On cooler / box ☐ On samples

☐ Courier ■ Walk-In ☐ Field Sampling ☐ Shipping Info: _____

Section 3a: Condition / Packaging ☐ **Outside 0.0 - 6.0°C (0.0 - 10.0°C for microbiology) (PM notified)**

Date Opened 3/11/25 By (initials) NIG Type of ice used: ■ Wet ☐ Blue/Gel ☐ None

■ Samples received on ice directly from the field; cooling process had begun. (if checked, skip temperatures)

☐ Sample matrix doesn't require cooling (e.g. air, bulk PCB). (if checked, skip temperatures)

If no cooler: Observed/Adjusted Temp (°C): _____/_____ Thermometer/IR Gun: IR11 CF: +0.1

Cooler Temp (°C) #1: 5.8 /5.9 #2: 5.6 /5.7 #3: 4.9 /5.0 #4: ____/____ #5: ____/____ #6: ____/____

Section 3b: Microbiology Samples ☒ **No microbiology samples submitted (skip 3b)**

☐ Within temp range 0.0 - 10.0°C or received on ice directly from field.

☐ Adequate headspace for microbiology analysis.

Section 3c: Air Samples ■ **No air samples submitted (skip 3c)**

☐ 1.4L Canisters ☐ 6L Canisters ☐ Tedlar Bags ☐ MCE Cassettes ☐ Sorbent Tubes ☐ Other_____

Section 4: Containers / Labels / Samples	YES	NO	N/A
1) Were custody papers present, filled properly, and legible?		\	
2) Is the sampler's name present on the CoC?	X		
3) Were containers received in good condition (unbroken / unopened / uncompromised)?	\		
4) Were the samples bagged? (required for microbiology samples; recommended for soil samples)	X		
5) Were all of, and only, the correct samples received?	X		
6) Are sample labels present, legible, and in agreement with the CoC?	X		
7) Does the container count match the CoC?	X		
8) Was sufficient sample volume / mass received for the analyses requested?	X		
9) Were samples received in proper containers for the analyses requested?	X		
10) Were samples received with > 1/2 holding time remaining?	X		
11) Are samples properly preserved as indicated by CoC / labels?	X		
12) Unpreserved VOAs received - If necessary, was the hold time changed in LIMS?			X
13) Are VOA vials free from headspace/bubbles > 6mm?		\	

Section 5: Explanations / Comments

(If no comments are made, then no discrepancies noted.)

4.13: -001 has headspace > 6mm in 1 of 3 vials.

4.1: Analyses requested on COC do not match the updated product template 'SW-MPars'. LR logged using the template which is correct per the PM.

☐ **No additional discrepancies**

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528551 Project No: SW - APPENDIX II Location: SW - APPENDIX II Date Received: 03/11/25

- This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/11/25. The samples were received cold and intact.
- This report was revised on 04/01/25 to include subcontracted 8151 and 8290 data.

Volatile Organics by GC/MS (EPA 8260B):

- SOUTH BASIN EAST INLET (lab # 528551-002) had pH greater than 2.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):

- SOUTH BASIN EAST INLET (lab # 528551-002) was diluted due to the viscous nature of the sample extract.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

- SOUTH BASIN EAST INLET (lab # 528551-002) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Pesticides (EPA 8081A):

- High recovery was observed for methoxychlor in the LCS for batch 365844; this analyte was not detected at or above the RL in the associated samples.
- SOUTH BASIN EAST INLET (lab # 528551-002) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

PCBs (EPA 8082):

- High surrogate recovery was observed for decachlorobiphenyl (PCB) in SOUTH BASIN EAST INLET (lab # 528551-002); no target analytes were detected in the sample.
- SOUTH BASIN EAST INLET (lab # 528551-002) was treated with sulfuric acid to reduce analytical interferences or due to the presence of color.
- SOUTH BASIN EAST INLET (lab # 528551-002) was diluted due to the dark and viscous nature of the sample extract.
- No other analytical problems were encountered.

Metals (EPA 200.8 and EPA 245.1):

- High response was observed for antimony in the ICV analyzed 03/13/25 13:10; this analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b".
- High response was observed for beryllium in the ICV analyzed 03/12/25 22:32; this analyte was not detected at or above the RL in the associated sample, and affected data was qualified with "b".
- High recovery was observed for antimony in the LCS for batch 365828; this analyte was not detected at or above the RL in the associated sample.
- Tin was detected between the MDL and the RL in the method blank for batch 365638; this analyte was not detected in the sample at or above the RL.
- No other analytical problems were encountered.

Total Phenolics (EPA 420.1):
No analytical problems were encountered.

Sulfide (SM 4500-S2-D):
No analytical problems were encountered.

Cyanide - Semi-Automated Method (SM 4500-CN-E and SM 4500-CN-E):
No analytical problems were encountered.

Organophosphorus Pesticides (EPA 8141A):
Pace Laboratories in Bakersfield, CA performed the analysis (see sublab report section for certifications). Please see the Pace Laboratories case narrative.

8151A Chlorinated Herbicides (EPA 8151A):
McCampbell Analytical, Inc. in Pittsburg, CA performed the analysis (NELAP certified). Please see the McCampbell Analytical, Inc. case narrative.

Dioxins & Furans (EPA 8290):

SAMPLE RECEIPT CHECKLIST

Section 1: General Info

Date Received: 3/11/25 WO# 528551 Client: Waste Connections

Section 2: Shipping / Custody **Are custody seals present?** ☐ Yes ☒ No

Custody seals intact on arrival? ■ N/A ☐ Yes ☐ No ☐ On cooler / box ☐ On samples

☐ Courier ■ Walk-In ☐ Field Sampling ☐ Shipping Info: _____

Section 3a: Condition / Packaging ☐ **Outside 0.0 - 6.0°C (0.0 - 10.0°C for microbiology) (PM notified)**

Date Opened 3/11/25 By (initials) NIG Type of ice used: ■ Wet ☐ Blue/Gel ☐ None

■ Samples received on ice directly from the field; cooling process had begun. (if checked, skip temperatures)

☐ Sample matrix doesn't require cooling (e.g. air, bulk PCB). (if checked, skip temperatures)

If no cooler: Observed/Adjusted Temp (°C): _____ / _____ Thermometer/IR Gun: IR11 CF: +0.1

Cooler Temp (°C) #1: 5.8 / 5.9 #2: 5.6 / 5.7 #3: 4.9 / 5.0 #4: ____ / ____ #5: ____ / ____ #6: ____ / ____

Section 3b: Microbiology Samples ☐ **No microbiology samples submitted (skip 3b)**

☐ Within temp range 0.0 - 10.0°C or received on ice directly from field.

☐ Adequate headspace for microbiology analysis.

Section 3c: Air Samples ■ **No air samples submitted (skip 3c)**

☐ 1.4L Canisters ☐ 6L Canisters ☐ Tedlar Bags ☐ MCE Cassettes ☐ Sorbent Tubes ☐ Other _____

Section 4: Containers / Labels / Samples	YES	NO	N/A
1) Were custody papers present, filled properly, and legible?		\	
2) Is the sampler's name present on the CoC?	X		
3) Were containers received in good condition (unbroken / unopened / uncompromised)?		\	
4) Were the samples bagged? (required for microbiology samples; recommended for soil samples)	X		
5) Were all of, and only, the correct samples received? ABD 3/11/25	~~X~~	\	
6) Are sample labels present, legible, and in agreement with the CoC?	X		
7) Does the container count match the CoC?	X		
8) Was sufficient sample volume / mass received for the analyses requested?	X		
9) Were samples received in proper containers for the analyses requested?	X		
10) Were samples received with > 1/2 holding time remaining?	X		
11) Are samples properly preserved as indicated by CoC / labels?	X		
12) Unpreserved VOAs received - If necessary, was the hold time changed in LIMS?			X
13) Are VOA vials free from headspace/bubbles > 6mm?		\	

Section 5: Explanations / Comments

(If no comments are made, then no discrepancies noted.)

4.13: -002 has headspace >6mm in 2 of 3 vials.

4.1: COC requests RSK 175 CO_2 which is not included in product template 'SW - Appendix II (USE)'. Logged per template which is correct per the PM.

4.3: One 1L amber glass jar was received with broken cap, seal still intact. Cap replaced.

4.5: 1x 40mL vial with HCl for Trip Blank was received with samples and logged as sample -003.

☐ **No additional discrepancies**

RE: Project: 528551
Pace Project No.: 30765497

Dear Zach Barker:

Enclosed are the analytical results for sample(s) received by the laboratory on March 14, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2503B18

Project: EO-258551

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Work Order No. 2503132

Mr. Zach Barker
Enthalpy Analytical
931 W. Barkley Avenue
Orange, CA 92868

Dear Mr. Barker,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on March 14, 2025 under your Project Name 'EO-528551'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mark.rein@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Mark Rein
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH .

Enthalpy Analytical - EDH Work Order No. 2503132
Case Narrative

Sample Condition on Receipt:

Two water samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements.

Analytical Notes:

EPA Method 8290A

The samples were extracted and analyzed for 2,3,7,8-tetra chlorinated dioxins by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected above the sample quantitation limits in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/14/25. The samples were received cold and intact.

Semivolatile Organics by GC/MS (EPA 625.1):

- SOUTH BASIN STAGE 2 (lab # 528894-001) and SOUTH BASIN OUTLET (lab # 528894-002) were diluted due to the dark color of the sample extracts.
- No other analytical problems were encountered.

Metals (EPA 200.8):
No analytical problems were encountered.

Biochemical Oxygen Demand (SM5210B):
No analytical problems were encountered.

Ammonia and TKN- Semi-Automated Method (SM 4500-NH3-G):

- High recovery was observed for ammonia-N in the MS for batch 367523; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Case Narrative

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 528896 Project No: SW - APPENDIX II Location: SW - APPENDIX II Date Received: 03/14/25

- This data package contains sample and QC results for two water samples, requested for the above referenced project on 03/14/25. The samples were received cold and intact.
- This report was revised on 04/02/25 to include subcontracted 8141 data.

Volatile Organics by GC/MS (EPA 8260B):

- Low recoveries were observed for a number of analytes in the MS for batch 366040; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):

No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):

- SOUTH BASIN STAGE 2 (lab # 528896-001) and SOUTH BASIN OUTLET (lab # 528896-002) were diluted due to the dark color of the sample extracts.
- No other analytical problems were encountered.

Pesticides (EPA 8081A):

- High recovery was observed for delta-BHC in the BS for batch 366212; the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples.
- SOUTH BASIN STAGE 2 (lab # 528896-001) and SOUTH BASIN OUTLET (lab # 528896-002) were diluted due to the color of the sample extracts.
- No other analytical problems were encountered.

PCBs (EPA 8082):

- SOUTH BASIN STAGE 2 (lab # 528896-001) and SOUTH BASIN OUTLET (lab # 528896-002) were treated with sulfuric acid to reduce analytical interferences or due to the presence of color.
- SOUTH BASIN STAGE 2 (lab # 528896-001) and SOUTH BASIN OUTLET (lab # 528896-002) were diluted due to the color of the sample extracts.
- No other analytical problems were encountered.

Metals (EPA 200.8 and EPA 245.1):

No analytical problems were encountered.

Total Phenolics (EPA 420.1):

No analytical problems were encountered.

Sulfide (SM 4500-S2-D):

No analytical problems were encountered.

Cyanide - Semi-Automated Method (SM 4500-CN-E and SM 4500-CN-E):
No analytical problems were encountered.

Organophosphorus Pesticides (EPA 8141A):
Pace Laboratories in Bakersfield, CA performed the analysis (see sublab report section for certifications). Please see the Pace Laboratories case narrative.

8151A Chlorinated Herbicides (EPA 8151A):
McCampbell Analytical, Inc. in Pittsburg, CA performed the analysis (NELAP certified). Please see the McCampbell Analytical, Inc. case narrative.

Dioxins & Furans (EPA 8290):
Enthalpy - El Dorado Hills in El Dorado Hills, CA performed the analysis (see sublab report section for certifications). Please see the Enthalpy - El Dorado Hills case narrative.

SAMPLE RECEIPT CHECKLIST

Section 1: General Info

Date Received: 03/14/25 WO# 528896 Client: Waste Connections

Section 2: Shipping / Custody **Are custody seals present?** ☐ Yes ☒ No

Custody seals intact on arrival? ■ N/A ☐ Yes ☐ No ☐ On cooler / box ☐ On samples

☐ Courier ■ Walk-In ☐ Field Sampling ☐ Shipping Info: _____

Section 3a: Condition / Packaging ☐ **Outside 0.0 - 6.0°C (0.0 - 10.0°C for microbiology) (PM notified)**

Date Opened 03/14/25 By (initials) HXD Type of ice used: ■ Wet ☐ Blue/Gel ☐ None

☐ Samples received on ice directly from the field; cooling process had begun. (if checked, skip temperatures)

☐ Sample matrix doesn't require cooling (e.g. air, bulk PCB). (if checked, skip temperatures)

If no cooler: Observed/Adjusted Temp (°C): _____ / _____ Thermometer/IR Gun: IR11 CF: 0

Cooler Temp (°C) #1: 8.5 / 8.0 #2: ____/____ #3: ____/____ #4: ____/____ #5: ____/____ #6: ____/____

Section 3b: Microbiology Samples ■ **No microbiology samples submitted (skip 3b)**

☐ Within temp range 0.0 - 10.0°C or received on ice directly from field.

☐ Adequate headspace for microbiology analysis.

Section 3c: Air Samples ■ **No air samples submitted (skip 3c)**

☐ 1.4L Canisters ☐ 6L Canisters ☐ Tedlar Bags ☐ MCE Cassettes ☐ Sorbent Tubes ☐ Other _____

Section 4: Containers / Labels / Samples	YES	NO	N/A
1) Were custody papers present, filled properly, and legible?	X		
2) Is the sampler's name present on the CoC?	X		
3) Were containers received in good condition (unbroken / unopened / uncompromised)?	X		
4) Were the samples bagged? (required for microbiology samples; recommended for soil samples)	X		
5) Were all of, and only, the correct samples received?	X		
6) Are sample labels present, legible, and in agreement with the CoC?	X		
7) Does the container count match the CoC?	X		
8) Was sufficient sample volume / mass received for the analyses requested?	X		
9) Were samples received in proper containers for the analyses requested?	X		
10) Were samples received with > 1/2 holding time remaining?	X		
11) Are samples properly preserved as indicated by CoC / labels?	X		
12) Unpreserved VOAs received - If necessary, was the hold time changed in LIMS?			X
13) Are VOA vials free from headspace/bubbles > 6mm?	X		

Section 5: Explanations / Comments

(If no comments are made, then no discrepancies noted.)

☐ **No additional discrepancies**

RE: Project: 528896
Pace Project No.: 30765485

Dear Zach Barker:

Enclosed are the analytical results for sample(s) received by the laboratory on March 19, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

The samples will be subcontracted to Pace Bakersfield for analysis. Results of the analysis are reported on the Pace Bakersfield data tables.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nikayla M. Yasurek

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2503C63

Project: EO-528896

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2503C63

Project: EO-528896

SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

S	Surrogate recovery outside accepted recovery limits.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Enthalpy Analytical - El Dorado Hills
Work Order No. 2503185

Mr. Zach Barker
Enthalpy Analytical
931 W. Barkley Avenue
Orange, CA 92868

Dear Mr. Barker,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on March 19, 2025 under your Project Name 'EO-528896'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mark.rein@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Mark Rein
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH .

Enthalpy Analytical - EDH Work Order No. 2503185
Case Narrative

Sample Condition on Receipt:

Two water samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements.

Analytical Notes:

EPA Method 8290A

The samples were extracted and analyzed for 2,3,7,8-tetra chlorinated dioxins by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected above the sample quantitation limits in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

Project: EO-528898

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

This data package contains sample and QC results for two water samples, requested for the above referenced project on 04/26/25. The samples were received cold and intact.

Metals (EPA 200.7):
No analytical problems were encountered.

Ion Chromatography (EPA 300.0):
No analytical problems were encountered.

Total Oil & Grease (HEM) (EPA 1664A):

- Matrix spikes were not performed for this analysis due to insufficient sample volume.
- No analytical problems were encountered.

Total Suspended Solids (TSS) (SM2540D):

- High RPD was observed for total suspended solids in the SDUP for batch 370128; the parent sample was not a project sample.
- No other analytical problems were encountered.

Coliform - 9221 Tests (SM 9221B and SM 9221F):
No analytical problems were encountered.

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 531818 Project No: SW - IGP Location: Stormwater - IGP Date Received: 04/26/25

This data package contains sample and QC results for two water samples, requested for the above referenced project on 04/26/25. The samples were received cold and intact.

Metals (EPA 200.7):
No analytical problems were encountered.

Ion Chromatography (EPA 300.0):
No analytical problems were encountered.

Total Oil & Grease (HEM) (EPA 1664A):

- Matrix spikes were not performed for this analysis due to insufficient sample volume.
- No analytical problems were encountered.

Total Suspended Solids (TSS) (SM2540D):

- High RPD was observed for total suspended solids in the SDUP for batch 370128; the parent sample was not a project sample.
- No other analytical problems were encountered.

Coliform - 9221 Tests (SM 9221B and SM 9221F):
No analytical problems were encountered.

Section 4: Containers / Labels / Samples	YES	NO	N/A
1) Were custody papers present, filled properly, and legible?	X		
2) Is the sampler's name present on the CoC?	X		
3) Were containers received in good condition (unbroken / unopened / uncompromised)?	X		
4) Were the samples bagged? (required for microbiology samples; recommended for soil samples)	X		
5) Were all of, and only, the correct samples received?	X		
6) Are sample labels present, legible, and in agreement with the CoC?	X		
7) Does the container count match the CoC?		X	
8) Was sufficient sample volume / mass received for the analyses requested?	X		
9) Were samples received in proper containers for the analyses requested?	X		
10) Were samples received with > 1/2 holding time remaining?	X		
11) Are samples properly preserved as indicated by CoC / labels?	X		
12) Unpreserved VOAs received - If necessary, was the hold time changed in LIMS?			X

Waste Connections Chiquita Canyon Landfill 29201 Henry Mayo Drive Castaic, CA 91384 Kate Logan	Lab Job Number: 531817 Project No: SW - APPENDIX II Location: SW - APPENDIX II Date Received: 04/26/25

- This data package contains sample and QC results for two water samples, requested for the above referenced project on 04/26/25. The samples were received cold and intact.
- This report was revised on 05/13/25 to include sub contracted 8290 and 8141 data.

Volatile Organics by GC/MS (EPA 8260B):
No analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):

- High responses were observed for 4-chloro-3-methylphenol, N-nitroso-di-n-propylamine, and phenol in the CCV analyzed 04/27/25 17:46; affected data was qualified with "b".
- Low recovery was observed for N-nitroso-di-n-propylamine in the matrix spike for batch 369835; the parent sample was not a project sample, and the BS/BSD were within limits.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
No analytical problems were encountered.

Pesticides (EPA 8081A):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 200.8 and EPA 245.1):

- Tin was detected between the MDL and the RL in the method blank for batch 369931; this analyte was not detected in samples at or above the RL.
- No other analytical problems were encountered.

Total Phenolics (EPA 420.1):
No analytical problems were encountered.

Sulfide (SM 4500-S2-D):
No analytical problems were encountered.

Cyanide - Semi-Automated Method (SM 4500-CN-E and SM 4500-CN-E):

- Low recoveries were observed for cyanide in the MS/MSD for batch 370243; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for cyanide.
- No other analytical problems were encountered.

Organophosphorus Pesticides (EPA 8141A):
Pace Laboratories in Bakersfield, CA performed the analysis (see sublab report section for certifications). Please see the Pace Laboratories case narrative.

8151A Chlorinated Herbicides (EPA 8151A):
McCampbell Analytical, Inc. in Pittsburg, CA performed the analysis (NELAP certified). Please see the McCampbell Analytical, Inc. case narrative.

Dioxins & Furans (EPA 8290):
Enthalpy - El Dorado Hills in El Dorado Hills, CA performed the analysis (see sublab report section for certifications). Please see the Enthalpy - El Dorado Hills case narrative.

Section 4: Containers / Labels / Samples	YES	NO	N/A
1) Were custody papers present, filled properly, and legible?	X		
2) Is the sampler's name present on the CoC?	X		
3) Were containers received in good condition (unbroken / unopened / uncompromised)?	X		
4) Were the samples bagged? (required for microbiology samples; recommended for soil samples)	X		
5) Were all of, and only, the correct samples received?	X		
6) Are sample labels present, legible, and in agreement with the CoC?	X		
7) Does the container count match the CoC?		X	
8) Was sufficient sample volume / mass received for the analyses requested?	X		
9) Were samples received in proper containers for the analyses requested?	X		
10) Were samples received with > 1/2 holding time remaining?	X		
11) Are samples properly preserved as indicated by CoC / labels?	X		
12) Unpreserved VOAs received - If necessary, was the hold time changed in LIMS?	X		
13) Are VOA vials free from headspace/bubbles > 6mm?		X	

Section 5: Explanations / Comments

(If no comments are made, then no discrepancies noted.)

RE: Project: 531817
Pace Project No.: 30775412

Dear Zach Barker:

Enclosed are the analytical results for sample(s) received by the laboratory on April 29, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

The samples will be subcontracted to Pace Bakersfield for analysis. Results of the analysis are reported on the Pace Bakersfield data tables.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nikayla M. Yasurek

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2504M23

Project: EO-531817

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

Project: EO-531817

SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TNTC	“Too Numerous to Count;” greater than 250 colonies observed on the plate.
TZA	TimeZone Net Adjustment for sample collected outside of MAI's Coordinated Universal Time (UTC). (Adjustment for Daylight Saving is not accounted.)
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Work Order No. 2504330

Mr. Zach Barker
Enthalpy Analytical
931 W. Barkley Avenue
Orange, CA 92868

Dear Mr. Barker,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on April 29, 2025 under your Project Name 'EO-531817'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mark.rein@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Byron Clack For Mark Rein
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH .

Enthalpy Analytical - EDH Work Order No. 2504330
Case Narrative

Sample Condition on Receipt:

Two water samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements.

Analytical Notes:

EPA Method 8290A

The sample was extracted and analyzed for 2,3,7,8-tetra chlorinated dioxins by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected above the sample quantitation limits in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

This data package contains sample and QC results for two water samples, requested for the above referenced project on 04/26/25. The samples were received cold and intact.

Volatile Organics by GC/MS (EPA 8260B):

- Low recoveries were observed for a number of analytes in the MS/MSD for batch 370234; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits.
- No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
No analytical problems were encountered.

Total Organic Carbon by IR (SM 5310B):
No analytical problems were encountered.

Metals (EPA 200.7 and EPA 200.8):

- High recoveries were observed for boron in the MS/MSD for batch 369931; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for boron.
- No other analytical problems were encountered.

Ion Chromatography (EPA 300.0):
No analytical problems were encountered.

Conductivity (SM2510B):
No analytical problems were encountered.

Alkalinity (SM2320B):
No analytical problems were encountered.

Sulfide (SM 4500-S2-D):
No analytical problems were encountered.

Total Dissolved Solids (TDS) (SM2540C):
No analytical problems were encountered.

Chemical Oxygen Demand (SM5220D):
No analytical problems were encountered.

Turbidity (SM2130B):
No analytical problems were encountered.

Glossary of Terms & Qualifier Definitions

Client: Enthalpy Analytical **WorkOrder:** 2504M22

Project: EO-531819

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CCV	Continuing Calibration Verification.
CCV REC (%)	% recovery of Continuing Calibration Verification.
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LCS2	Second LCS for the batch. Spike level is lower than that for the first LCS; applicable to method 1633.
LQL	Lowest Quantitation Level
MB	Method Blank
MB IS/SS % Rec	% Recovery of Internal Standard or Surrogate in Method Blank, if applicable
MB SS % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SNR	Surrogate is diluted out of the calibration range

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- ISM prep requires 5 to 10 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 6 to 11 days from sample submission). Due date listed on WO summary will not accurately reflect the time needed for sample preparation.

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Authorized nonstormwater discharges? (Yes or No)	No
South Sampling	
Unauthorized nonstormwater discharges? (Yes or No)	No
Authorized nonstormwater discharges? (Yes or No)	No
All Operations	
Is equipment serviced outside of maintenance area or on the active face minimized during wet weather?	Yes
Are paved areas of the facility vacuum swept weekly?	Yes
Are loose absorbents deployed over spills cleaned up after each use and disposed of properly?	Yes
Erosion and Sediment	
Is stormwater properly diverted around active fill area and soil stockpile?	Yes
Is a stormwater conveyance system to divert runoff around material storage areas and convey runoff installed and maintained?	Yes
Are sediment and retention basins properly maintained?	Yes
Are slope protection measures applied?	Yes
Are energy dissipating devices installed to slow the velocity of storm water drainage and prevent erosion?	Yes
Recycling Storage	
Are outdoor recyclable materials covered 48 hours ahead of likely storm events forecast at 50 percent or greater probability at the facility?	Yes
Trash Disposal	
Do all garbage containers in use have a lid closed or tarp placed?	Yes

E-waste Storage Area	
Is all E-waste under cover?	N/A
Are materials stored in appropriately segregated and covered containers in an area that is away from traffic flow?	N/A
Household Hazardous Waste Collection	
Are all Household Hazardous Waste materials under cover?	Yes
Are materials stored in appropriately segregated and covered containers in an area away from traffic flow and on secondary containment?	Yes
Do any storage containers display evidence of leakage?	No
Leachate & Condensate Collection, Storage, & Conveyance	
Are tanks provided with secondary containment?	Yes
Is secondary containment area/berms free of debris?	Yes
Are there any visible spills or leaks?	No
Temporary Leachate & Condensate Collection, Storage, & Conveyance	
Are tanks provided with secondary containment?	Yes
Is secondary containment area/berms free of debris?	Yes
Are there any visible spills or leaks?	No
Spill Response Kits	
Are any spill kits missing or relocated from the maintenance shop?	No
Are any spill kits missing supplies or in poor condition at the maintenance shop (e.g. lids broken, full of water, mildew, or staining?)	No
Tracking Industrial Vehicle Entry/Exit Points	
Any off-site tracking of sediment or dirt?	No
Geomembrane Cover and North and West perimeter Road	

Is stormwater properly diverted around reaction area?	Yes
Are there any visible signs of leachate seep(s), and if so, did you immediately inform your supervisor and contain the seep?	No
Are soil dams/berms and other best management practices in place or available to prevent any leachate from reaching the south detention basin?	Yes
Are there any visible signs of residual leachate seeps in the concrete channel which should be pressure washed and cleaned?	No
Are there any visible signs of damage to the geomembrane cover (tears, punctures, etc.) and if so, did you immediately inform your supervisor?	No

Bulk Fuel and Oil Tanks	
Is the containment structure free of: water, debris, holes, cracks, fire hazards, liner degradation, corrosion, leakage, or paint failure? Is there water in the primary tank? Are containment drain valves operable and in the closed position (exercise valves)? Are there visible signs of leakage on the tank, interstice, or from the tank into the containment or surrounding soil? Does the exterior of the tank show signs of coating failure, distortions, buckling, denting, or bulging? Are pathways and entry to and from the tank clear and are gates/doors operable?

Are outdoor recyclable materials covered 48 hours ahead of likely storm events forecast at 50 percent or greater probability at the facility?	Yes
Trash Disposal	
Do all garbage containers in use have a lid closed or tarp placed?	Yes

E-waste Storage Area	
Is all E-waste under cover?	N/A
Are materials stored in appropriately segregated and covered containers in an area that is away from traffic flow?	Yes
Household Hazardous Waste Collection	
Are all Household Hazardous Waste materials under cover?	Yes
Are materials stored in appropriately segregated and covered containers in an area away from traffic flow and on secondary containment?	Yes
Do any storage containers display evidence of leakage?	No
Leachate & Condensate Collection, Storage, & Conveyance	
Are tanks provided with secondary containment?	Yes
Is secondary containment area/berms free of debris?	Yes
Are there any visible spills or leaks?	No
Temporary Leachate & Condensate Collection, Storage, & Conveyance	
Are tanks provided with secondary containment?	Yes
Is secondary containment area/berms free of debris?	Yes
Are there any visible spills or leaks?	No
Spill Response Kits	
Are any spill kits missing or relocated from the maintenance shop?	No
Are any spill kits missing supplies or in poor condition at the maintenance shop (e.g. lids broken, full of water, mildew, or staining?)	No
Tracking Industrial Vehicle Entry/Exit Points	
Any off-site tracking of sediment or dirt?	No
Geomembrane Cover and North and West perimeter Road	

Is stormwater properly diverted around reaction area?	Yes
Are there any visible signs of leachate seep(s), and if so, did you immediately inform your supervisor and contain the seep?	No
Are soil dams/berms and other best management practices in place or available to prevent any leachate from reaching the south detention basin?	Yes
Are there any visible signs of residual leachate seeps in the concrete channel which should be pressure washed and cleaned?	No
Are there any visible signs of damage to the geomembrane cover (tears, punctures, etc.) and if so, did you immediately inform your supervisor?	No

Bulk Fuel and Oil Tanks	
Is the containment structure free of: water, debris, holes, cracks, fire hazards, liner degradation, corrosion, leakage, or paint failure? Is there water in the primary tank? Are containment drain valves operable and in the closed position (exercise valves)? Are there visible signs of leakage on the tank, interstice, or from the tank into the containment or surrounding soil? Does the exterior of the tank show signs of coating failure, distortions, buckling, denting, or bulging? Are pathways and entry to and from the tank clear and are gates/doors operable?

Subject: **First Quarter 2025 Solid Waste Disposal Report**
Chiquita Canyon Landfill (File No. 67-20)
Los Angeles County, California

Dear Mr. Casas:

This is the First Quarter 2025 Solid Waste Disposal Report for the Chiquita Canyon Landfill. This report is required by Monitoring and Reporting Program No. CI-6231 dated December 13, 2018, and Waste Discharge Requirements Order No. R4-2018-0172 File No. 67-020 adopted December 13, 2018. This report covers the period from January-March 2025.

A point-by-point discussion of reporting requirements follows:

1. The reports to the Regional Board shall include a map of the site, and shall indicate the area(s) where disposal is taking place or will begin. This map shall be updated quarterly and summarized and submitted with the annual report due February 15 of each year. If a new area is landfilled, it shall be identified in the corresponding quarterly report.

As the Water Board is aware, CCL closed the Chiquita Canyon Landfill to the acceptance of waste effective January 1, 2025. CCL does not receive any waste or beneficial reuse materials, but does continue to dispose of a small quantity of internally generated waste. Enclosed, as Attachment 1 is a drawing showing the locations where CCL disposed of the internally generated waste during the First Quarter 2025.

2. A tabular list of the estimated average monthly quantities and types of materials deposited each month.

As discussed above, the Landfill is now closed to the acceptance of waste.

3. An estimate of remaining capacity (in cubic yards and tons), and the remaining life of the site in years and months.

As discussed above, the Landfill is now closed to the acceptance of waste.

4. A certification that all wastes deposited were deposited in compliance with the Board's requirements, and that no waste was deposited outside the boundaries of the waste management facility as specified in the Board requirements.

During the reporting period, the site was operated in compliance with the Board's requirements and no wastes were deposited outside the boundary of the waste management unit.

5. A description of the location and an estimate of the seepage rate or flow of all known seeps and springs at the site.

No water seeps or springs were discovered during visual monitoring of the landfill conducted in January, February and March 2025.

6. The estimated amount of water used at the waste management area for landscape irrigation, compaction, dust control, etc. (If a source other than potable waste is used, the sources and amounts of water from each source shall also be reported).

During the reporting period, approximately 2,241,834 gallons of water were used for dust control, irrigation, and site operation construction. Water was obtained from Newhall Land and Farming Company from an irrigation line located south of the site near Highway 126.

7. Quantities of liquid pumped from the leachate monitoring sumps and/or extraction wells, including dates of removal, and the ultimate disposition (dust control, returned to landfill, disposal). If no liquid was detected or pumped during the reporting period, a statement to that effect shall be submitted.

Information on quantities of leachate pumped and disposed during the reporting period is enclosed as Attachment 3.

8. The discharger shall report all unacceptable (to this site) wastes inadvertently received at this site and their disposition. The following details shall be included:

a. **The source (if known), including the hauler, of the unacceptable wastes and date received and/or discovered.**
b. **Identification of waste (if known) and the amount of waste.**
c. **The name and address of the hauler who removed the waste from the site.**
d. **The ultimate point of disposal for the waste.**
e. **The discharger's actions to prevent recurrence of the attempted depositing of unacceptable wastes by this source or individual (if applicable). If no unacceptable wastes were received (or discovered) during the month, the report shall so state.**

As discussed above, the Landfill is now closed to the acceptance of waste. Only a small amount of internally generated waste is disposed of at the Landfill, which does not include any unacceptable waste. All internal waste is checked before disposal.

If you should have any questions regarding this report, please do not hesitate to contact me at (661) 257-3655.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on the 15th day of April, 2025.

Please do not hesitate to contact me at with any questions regarding the above responses.

Sincerely,

CHIQUITA CANYON LANDFILL

Subject: **Second Quarter 2025 Solid Waste Disposal Report**
Chiquita Canyon Landfill (File No. 67-20)
Los Angeles County, California

Dear Mr. Casas:

This is the Second Quarter 2025 Solid Waste Disposal Report for the Chiquita Canyon Landfill. This report is required by Monitoring and Reporting Program No. CI-6231 dated December 13, 2018, and Waste Discharge Requirements Order No. R4-2018-0172 File No. 67-020 adopted December 13, 2018. This report covers the period from April-June 2025.

A point-by-point discussion of reporting requirements follows:

1. The reports to the Regional Board shall include a map of the site, and shall indicate the area(s) where disposal is taking place or will begin. This map shall be updated quarterly and summarized and submitted with the annual report due February 15 of each year. If a new area is landfilled, it shall be identified in the corresponding quarterly report.

As the Water Board is aware, CCL closed the Chiquita Canyon Landfill to the acceptance of waste effective January 1, 2025. CCL does not receive any waste or beneficial reuse materials, but does continue to dispose of a small quantity of internally generated waste. Enclosed, as Attachment 1 is a drawing showing the locations where CCL disposed of the internally generated waste during the Second Quarter 2025.

2. A tabular list of the estimated average monthly quantities and types of materials deposited each month.

As discussed above, the Landfill is now closed to the acceptance of waste.

3. An estimate of remaining capacity (in cubic yards and tons), and the remaining life of the site in years and months.

As discussed above, the Landfill is now closed to the acceptance of waste.

4. A certification that all wastes deposited were deposited in compliance with the Board's requirements, and that no waste was deposited outside the boundaries of the waste management facility as specified in the Board requirements.

During the reporting period, the site was operated in compliance with the Board's requirements and no wastes were deposited outside the boundary of the waste management unit.

5. A description of the location and an estimate of the seepage rate or flow of all known seeps and springs at the site.

No water seeps or springs were discovered during visual monitoring of the landfill conducted in April, May and June 2025.

6. The estimated amount of water used at the waste management area for landscape irrigation, compaction, dust control, etc. (If a source other than potable waste is used, the sources and amounts of water from each source shall also be reported).

During the reporting period, approximately 2,825,340 gallons of water were used for dust control, irrigation, and site operation construction. Water was obtained from Newhall Land and Farming Company from an irrigation line located south of the site near Highway 126.

7. Quantities of liquid pumped from the leachate monitoring sumps and/or extraction wells, including dates of removal, and the ultimate disposition (dust control, returned to landfill, disposal). If no liquid was detected or pumped during the reporting period, a statement to that effect shall be submitted.

Information on quantities of leachate pumped and disposed during the reporting period is enclosed as Attachment 3.

8. The discharger shall report all unacceptable (to this site) wastes inadvertently received at this site and their disposition. The following details shall be included:

a. **The source (if known), including the hauler, of the unacceptable wastes and date received and/or discovered.**
b. **Identification of waste (if known) and the amount of waste.**
c. **The name and address of the hauler who removed the waste from the site.**
d. **The ultimate point of disposal for the waste.**
e. **The discharger's actions to prevent recurrence of the attempted depositing of unacceptable wastes by this source or individual (if applicable). If no unacceptable wastes were received (or discovered) during the month, the report shall so state.**

As discussed above, the Landfill is now closed to the acceptance of waste. Only a small amount of internally generated waste is disposed of at the Landfill, which does not include any unacceptable waste. All internal waste is checked before disposal.

If you should have any questions regarding this report, please do not hesitate to contact me at (661) 257-3655.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on the 15th day of July, 2025.

Please do not hesitate to contact me at with any questions regarding the above responses.

Sincerely,

CHIQUITA CANYON LANDFILL

WASTE ACCEPTANCE REPORT

APPENDIX J

WASTE ACCEPTANCE REPORT

FIRST SEMIANNUAL 2025

The California Regional Water Quality Control Board, Los Angeles Region (RWQCB) adopted Order No. R4-2011-0052 (Order) in March 2011 which amended the waste discharge requirements (WDRs) for the Chiquita Canyon Landfill (CCL). The Order serves as the WDRs for the "disposal of non-designated/non-hazardous contaminated soils and the onsite use of non-hazardous contaminated soils or related wastes" at municipal solid waste (MSW) landfills. The Order defines "contaminated soils" as soils that are impacted by pollutants listed in the WDRs, but in low enough concentrations that the soil is not a designated or hazardous waste.

In compliance with the Order, CCL submitted an updated Waste Acceptance Plan (WAP) (revised April 29, 2011) to the RWQCB Executive Officer for approval. The WAP describes the procedures that have been implemented at CCL for obtaining and approving soil profiling information, testing procedures for waste constituents accepted, site-specific threshold levels for all appropriate wastes accepted (for disposal or reuse), and a description of the personnel responsible for implementing the plan. CCL's Special Waste reporting requirements are described in Section 3.0 of the WAP.

This document provides the Special Waste acceptance and disposal information for the fourth quarter of 2024 and the first quarter of 2025 (October 2024 – March 2025) as described in the WAP, and as required by Section F (Reporting Requirements) of the Order. Data collected during the second and third quarters of 2025 (April 2025 – September 2025) will be included in the second semiannual report for 2025 (due January 31, 2026).

Each of the specific reporting requirements, as specified in Section F of the Order, is addressed in the following paragraphs:

1. The report shall include a summary of the types, volumes and disposal or onsite use for all wastes accepted pursuant to the requirements of the Order.

During the reporting period (October 1, 2024 through March 31, 2025), approximately 96,451 tons of Special Waste were accepted for disposal and/or use at CCL. Table 1 summarizes the types and volumes of wastes accepted and identifies the final disposition of the wastes (disposal or beneficial use). All 96,451 tons of Special Waste were used or disposed of within the active portion of the lined landfill. No Special Waste was used outside the lined landfill boundary.

2. The report shall include a compilation of all waste profiling information utilized by CCL to implement the program requirements including all sampling, measurement and analytical results including:

- **Date, exact place and time of the sampling or measurement;**
- **Individual(s) who did the sampling or measurement;**
- **Date(s) the analyses were done;**
- **Analyses names;**
- **Analytical techniques or methods used to profile contaminated soils or wastes.**

As described in Section 1.4 of the WAP, Special Wastes are defined as wastes that require analysis and testing (profiling) prior to acceptance due to their component make-up. CCL maintains a working knowledge of waste received using two approaches: 1) prequalification of specific wastes prior to transport to the facility, and 2) evaluation of waste loads received at the facility. The prequalification process includes the following components:

1) Each generator of a Special Waste is required to complete and certify a Special Waste Profile form, or a similar form, prior to the initial shipment of their wastes to CCL. The profile form includes generator, customer and transporter information, as well as a waste stream description (common name of material or waste stream, description of the process generating the waste, and waste characteristics), and generator certification.

2) The CCL Special Waste Coordinator (SWC) will evaluate the profile form along with other required documentation to determine whether the waste stream is acceptable. Additional documentation includes certified analytical reports (CARs) and chain of custody documentation (COCs) from a California Department of Health Services (DHS) Accredited Environmental Laboratory, special waste (non-hazardous) manifests, Material Safety Data Sheet(s), and a description of the process(es) generating the waste.

3) The SWC will determine whether correct and sufficient information has been provided by the generator and whether the waste stream is within CCL's acceptance criteria. The SWC will communicate with the generator regarding specific concerns, or missing or incomplete information.

4) If the waste stream is deemed acceptable for use and/or disposal at CCL, the SWC identifies the approved "disposal method," defines any special handling instructions for the waste, and assigns a unique Special Waste Profile Approval Number to the waste stream. The approval number, which is unique to the generator and the waste stream, allows CCL to electronically track the incoming wastes and the associated documentation for each waste stream. Each approval number (and profile form) is dated and given an expiration date, depending on the type of waste and the generating process(es).

Table 2 summarizes the special wastes that were approved at CCL during the current reporting period, presented numerically by CCL approval number. The table also provides the generator's name, the waste stream description, and notes regarding CARs and COCs. Copies of the relevant CARs and COCs are provided in Attachment A. The CARs and the COCs provide the required information regarding the individuals collecting representative samples, the type and number of samples collected, the analyses conducted, and the results of those analyses.

Re: ATL Work Order Number : 2401197

Client Reference : D1259 - 3809 E 58th St, Maywood, CA 90270

Enclosed are the results for sample(s) received on July 16, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 07/25/24 14:11 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 16th, 2024 at 14:35. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Parsons	Project Number : D1259 - 3809 E 58th St, Maywood, CA 90270
100 W Walnut St	Report To : Tom Blaney
Pasadena , CA 91124	Reported : 07/25/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401197

Client Reference : D1259 - 3809 E 58th St, Maywood, CA 90270

Enclosed are the results for sample(s) received on July 16, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services

Authorized to Release on 08/16/24 07:51 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 16th, 2024 at 14:35. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Pasadena , CA 91124	Reported : 08/16/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
Q2	Analyte is high biased on QC. Sample result/s was non-detect (ND); therefore reanalysis was not necessary.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B14	Analyte above PQL in CCB, however sample non-detected. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Hi Lena,

Please run the following on a standard turnaround time:

1. D1439-WC-A1A2 (LAB REPORT 2401191): STLC for lead
2. D1439-WC-A1A2A3 (LAB REPORT 2401191): STLC for lead
3. PIA-07367-WC-A1A2 (LAB REPORT 2401189): STLC for lead
4. ENA-19-WC-A1A2 (LAB REPORT 2401187): STLC for lead
5. D1259-WC-A1A2 (LAB REPORT 2401197): STLC for lead
6. E03893-WC-A1A2 (LAB REPORT 2401195): STLC for lead
7. RP0838-WC-A1A2 (LAB REPORT 2401201): STLC and TCLP for lead
8. RP0838-WC-A1A2A3 (LAB REPORT 2401201): STLC and TCLP for lead
9. B0940-WC-A1A2A3 (LAB REPORT 2401199): STLC and TCLP for lead

Data Validatable Report

Work Order Case Narrative

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
*	Value outside of control limits.
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DI	Deionized Water
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour

Data Validatable Report

Work Order Case Narrative

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

This report contains additional data to the report previously submitted. The analyses added are STLC-6010B-Pb and TCLP-6010B-Pb and were added per client request on 8/9/24. This document is the official version and is in addition to the earlier report.

Qualifiers and Definitions

Item	Qualifiers
D	Sample was analyzed under dilution due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
*	Value outside of control limits.
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DI	Deionized Water
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics

Re: ATL Work Order Number : 2401010

Client Reference : PIA-02880 - 1142 S Alma Ave., Los Angeles, CA 90023

Enclosed are the results for sample(s) received on June 19, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 06/21/24 14:49 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on June 19th, 2024 at 15:50. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Parsons		Project Number :	PIA-02880 - 1142 S Alma Ave., Los Angeles, CA 90023
100 W Walnut St		Report To :	Tom Blaney
Pasadena , CA 91124		Reported :	06/21/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B14	Analyte above PQL in CCB, however sample non-detected. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401010

Client Reference : PIA-02880 - 1142 S Alma Ave., Los Angeles, CA 90023

Enclosed are the results for sample(s) received on June 19, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services

Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on June 19th, 2024 at 15:50. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Parsons	Project Number :	PIA-02880 - 1142 S Alma Ave., Los Angeles, CA 90023
100 W Walnut St	Report To :	Tom Blaney
Pasadena , CA 91124	Reported :	07/24/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B3	Analyte is detected in the associated method blank, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B14	Analyte above PQL in CCB, however sample non-detected. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Work Order Case Narrative

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.
R	The RPD was outside of QC acceptance limits due to possible matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
*	Value outside of control limits.
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DI	Deionized Water
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter

ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
ppb v	Parts per billion by volume
ppmC	Parts per million Carbon
PSU	Practical Salinity Unit
Q	Qualifier Column
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons

Data Validatable Report

Work Order Case Narrative

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

This report contains additional data to the report previously submitted. The analyses added are STLC-6010B-Pb and TCLP-6010B-Pb and were added to sample BFG0034-01 per client request on 7/17/24. This document is the official version and is in addition to the earlier report.

Qualifiers and Definitions

Item	Qualifiers
D	Sample was analyzed under dilution due to matrix interference.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
*	Value outside of control limits.
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DI	Deionized Water
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics

Hi Hailley,

Please run the following on a standard turnaround time:

1. A0355-WC-A1A2 (LAB REPORT BFG0034): STLC and TCLP for lead
2. B0964-WC-A1A2A3 (LAB REPORT BFG0047): STLC and TCLP for lead

Thank you,

Date Received: 07/03/2024 Received by: Greta Giragoosian

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☐ Cooler (_____) ☑ Other (Specify): Box

Sample Container Temperature: 26.3 °C IR Gun S/N: 51941911MV

Type of sample containers: VOA, Glass bottles, ✔Wide mouth jars, HDPE bottles, Metal sleeves, Acetate sleeves, 5035 Kit: AETL o r Client, Tedlar Bags, Summa Canister: 6L, 3L, 1L, Others (Specify): _____

How are samples preserved: ☑ None, ☐ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No*	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers intact and in good condition?	✔			
8. Are samples preserved?			✔	
9. Are samples preserved properly for the intended analysis?			✔	
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	
12. Are there any samples with short hold times?		✔		

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager (PM). The PM will contact the client for Analyze or Resample instructions.

* For samples generating a "No" answer, the Project Manager is notified, and the PM will contact the client for Analyze or Resample instructions.

Re: ATL Work Order Number : 2401176

Client Reference : RP0638B - 1240 S McBride Ave, Los Angeles, CA 90022

Enclosed are the results for sample(s) received on July 12, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services

Authorized to Release on 07/24/24 17:28 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 12th, 2024 at 14:50. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

Parsons	Project Number : RP0638B - 1240 S McBride Ave, Los Angeles, CA 90022
100 W Walnut St	Report To : Tom Blaney
Pasadena , CA 91124	Reported : 07/24/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401176

Client Reference : RP0638B - 1240 S McBride Ave, Los Angeles, CA 90022

Enclosed are the results for sample(s) received on July 12, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 08/05/24 17:09 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 12th, 2024 at 14:50. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Data Validatable Report

Work Order Case Narrative

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Performance Analytical Laboratories for EPA 6010B. Please see attached report for results.

This report contains additional data to the report previously submitted. The analyses added are STLC-6010B-Pb and TCLP-6010B-Pb and were added per client request on 8/6/24. This document is the official version and is in addition to the earlier report.

Qualifiers and Definitions

Item	Qualifiers
D	Sample was analyzed under dilution due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
*	Value outside of control limits.
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DI	Deionized Water
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics

Dear Hailley Coleman

Enclosed are the results of analyses for samples received by our laboratory on 7/25/2024. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela

Notes and Definitions

Item	Definition
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
QM-01	Spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

Re: ATL Work Order Number : 2401218

Client Reference : E1077 - 3067 E 60th PL, Huntington Park, CA 90255

Enclosed are the results for sample(s) received on July 19, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services

Authorized to Release on 08/16/24 09:19 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 19th, 2024 at 14:22. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
Q2	Analyte is high biased on QC. Sample result/s was non-detect (ND); therefore reanalysis was not necessary.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B18	Associated method blank above MDL, but below half of the PQL value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B14	Analyte above PQL in CCB, however sample non-detected. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B	Analyte detected in the associated method blank above the PQL.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401218

Client Reference : E1077 - 3067 E 60th PL, Huntington Park, CA 90255

Enclosed are the results for sample(s) received on July 19, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 07/29/24 15:44 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 19th, 2024 at 14:22. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B18	Associated method blank above MDL, but below half of the PQL value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B	Analyte detected in the associated method blank above the PQL.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401187

Client Reference : ENA19 - 928 Bernal Ave., Los Angeles, CA 90023

Enclosed are the results for sample(s) received on July 15, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 07/25/24 14:00 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 15th, 2024 at 15:05. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

Parsons	Project Number : ENA19 - 928 Bernal Ave., Los Angeles, CA 90023
100 W Walnut St	Report To : Tom Blaney
Pasadena , CA 91124	Reported : 07/25/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401187

Client Reference : ENA19 - 928 Bernal Ave., Los Angeles, CA 90023

Enclosed are the results for sample(s) received on July 15, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 08/16/24 07:35 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 15th, 2024 at 15:05. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

Pasadena , CA 91124	Reported : 08/16/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
Q2	Analyte is high biased on QC. Sample result/s was non-detect (ND); therefore reanalysis was not necessary.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B14	Analyte above PQL in CCB, however sample non-detected. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401268

Client Reference : D1543 - 4647 E 59th Pl, Maywood, CA 90270

Enclosed are the results for sample(s) received on July 26, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services
lena.davidkov@atlglobal.com
Authorized to Release on 08/06/24 07:57 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 26th, 2024 at 14:11. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

EPA 6010B:

There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues, other than those noted in the section entitled “Notes and Definitions”.

Parsons	Project Number : D1543 - 4647 E 59th Pl, Maywood, CA 90270
100 W Walnut St	Report To : Tom Blaney
Pasadena , CA 91124	Reported : 08/06/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.

Re: ATL Work Order Number : 2401268

Client Reference : D1543 - 4647 E 59th Pl, Maywood, CA 90270

Enclosed are the results for sample(s) received on July 26, 2024 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Lena Davidkov, Client Services

Authorized to Release on 08/16/24 09:58 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

CASE NARRATIVE

The following Case Narrative, presented as an exception report, exclusively pertains to the data included within this report. This report, and the data within it, is to be interpreted as having no issues, abnormalities, or anomalies, other than those specifically noted in this narrative, or otherwise noted within the section entitled “Notes and Definitions”.

If there are no relevant data issues, the following statement will be included: “There are no qualifications to report; the data herein is to be interpreted as being without any relevant data issues”.

General Notes

1. When dilutions are necessary, it is to enable the quantification of target analytes within the instrument calibration range, or to reduce interferences that would otherwise prevent the quantification of target analytes. For samples that have been diluted, the final results are reflective of any calculated adjustments that are required. Samples requiring dilution will, by nature, have elevated Reporting Limits; in some cases, this may result in Reporting Limits that are higher than the client objectives. Elevated Reporting Limits are not considered a qualification or data issue, and are therefore not included in the Case Narrative.

2. The calculated results in this report are rounded; however, the calculated results are based on data that was not rounded, to avoid any round-off errors in the final results.

Holding Times and Preservations

1. Unless otherwise stated below, samples were received in good condition, at proper temperature, with proper preservation for the requested method(s) documented, and all holding times were met.

2. For methods that require chilling, samples are within acceptance if they are within the temperature range specified by the method, or within 2 degrees Celsius of the specific temperature prescribed by the method. For methods requiring that samples be chilled to 4 degrees Celsius, the laboratory considers the acceptable range to be between “above-freezing” and 6 degrees Celsius. Samples that are received in the laboratory on the day of collection may not meet the temperature requirements of the method, however, per NELAC guidance, samples are considered to be in acceptable condition if there is evidence that the chilling process has begun; such evidence is inclusive of samples arriving on ice, or packed with other appropriate cooling material (blue ice, dry ice, etc.).

SAMPLE RECEIPT

The samples associated with this report were received by the laboratory on July 26th, 2024 at 14:11. The sample(s) arrived in good condition. Unless otherwise noted in the section titled Receipt Exceptions. The temperature of the cooler at receipt was 22.4 degrees Celsius.

METALS

Parsons	Project Number : D1543 - 4647 E 59th Pl, Maywood, CA 90270
100 W Walnut St	Report To : Tom Blaney
Pasadena , CA 91124	Reported : 08/16/2024

Notes and Definitions

U	Analyte included in the analysis, but not detected
R	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
Q2	Analyte is high biased on QC. Sample result/s was non-detect (ND); therefore reanalysis was not necessary.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
B8	IFA outside the acceptance FMRL range,but the analyte has a negative value. Therefore, reanalysis is not necessary.
B18	Associated method blank above MDL, but below half of the PQL value. Therefore, reanalysis is not necessary.
B16	Analyte is detected in the ICB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
B14	Analyte above PQL in CCB, however sample non-detected. Therefore, reanalysis is not necessary.
B13	Analyte is detected in the CCB, but the analyte is at least 10x greater in the sample. Therefore, reanalysis is not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Please review the checklist below.

All samples which require thermal preservation are considered acceptable if the temperature upon arrival is within ± 2 °C of the required temperature or method specified range. For samples with a specified temperature of 4 °C, samples with a temperature ranging from just above freezing temperature of water to 6 °C shall be acceptable. Samples that are hand-delivered immediately following collection may not meet these criteria; however, they will be deemed acceptable per NELAC standards if there is evidence that the chilling process has begun, such as arrival on ice.

Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues. If you have any questions or further instructions, please contact your Project Manager at (562) 989-4045.
