

15 de octubre de 2025

Karen Gork
Jefa Especialista en Salud Ambiental
Agencia de Cumplimiento Local del Condado de Los Ángeles
5050 Commerce Drive
Baldwin Park, California 91706

Asunto: Informe Mensual de Septiembre de 2025 Conforme a los Objetivos 1A-3 y 5 de la Orden de Cumplimiento de la LEA del 6 de junio de 2024 y a la Carta del 30 de julio de 2024, Vertedero de Chiquita Canyon, Castaic, California

Estimada Sra. Gork:

SCS Engineers (SCS), en nombre de Chiquita Canyon, LLC (Chiquita), mediante el presente le proporciona al Programa de Gestión de Desechos Sólidos del Departamento de Salud Pública del Condado de Los Ángeles, que actúa como Agencia de Cumplimiento Local (LEA), un informe mensual, en cumplimiento con los Objetivos 1A-3 y 5 de la Orden de Cumplimiento de la LEA con fecha 6 de junio de 2024 (Orden de Cumplimiento) y la correspondencia posterior relacionada recibida de la LEA. Este informe abarca el período mensual de septiembre de 2025.

Chiquita Canyon Landfill (CCL o el Vertedero) es un vertedero/centro de disposición de desechos sólido, ubicado en 29201 Henry Mayo Drive en Castaic, California. Con relación al Vertedero, Chiquita opera un sistema de recolección y control de biogás. SCS elaboró y presentó el Informe Resumido sobre las Lecturas de Monóxido de carbono e Hidrógeno (Informe Resumido) a la LEA el 6 de junio de 2024 en nombre de Chiquita, en respuesta a las directivas indicadas en las cartas de la LEA con fecha 5 de abril de 2024 y 28 de mayo de 2024, sobre la toma de datos de biogás y conforme al Objetivo 1A-2 de la Orden de Cumplimiento. La LEA, en colaboración con el Departamento de Recursos, Reciclaje y Recuperación de California (CalRecycle), revisó el Informe Resumido y determinó que cumplía con el Objetivo 1A-2. La LEA estableció varios requerimientos nuevos para que Chiquita cumpla con el Objetivo 1A-3 en la correspondencia de seguimiento con fecha 30 de julio de 2024.

Este informe fue elaborado según los Objetivos 1A-3 y 5 de la Orden de Cumplimiento, la correspondencia de seguimiento de la LEA con fecha 30 de julio de 2024, la carta de Chiquita con fecha 3 de septiembre de 2024, la reunión del 12 de septiembre de 2024 con la LEA y la correspondencia de seguimiento de la LEA con fecha 19 y 27 de noviembre y 3 de diciembre de 2024.

Puntos de Cumplimiento con el Objetivo 1A-3

1. Presentar los resultados de los análisis de laboratorio de las muestras mensuales de monóxido de carbono (CO) e hidrógeno (H₂) tomadas de un set de pozos de biogás (LFG) seleccionados por la LEA. Consulte en la Tabla 1, las columnas rotuladas "CO" y "H₂".

Los resultados de los pozos monitoreados se muestran en el **Adjunto A**.¹ Los datos se están presentando a la LEA en un informe independiente firmado por un ingeniero matriculado, conforme al Objetivo 1A-3 de la Orden de Cumplimiento. Como se indicó en correspondencias previas de Chiquita y en los informes mensuales, este informe no incluye datos de los pozos CV-100, CV-1420, CV-1532, CV-2202, H-1774S, TC-2385A y TC-2385S, ya que esos pozos fueron abandonados, ni del pozo CV-2332, ya que ese pozo no se instaló nunca. Todos los demás pozos se evaluaron durante el mes de septiembre de 2025.

Como se trató en la reunión del 12 de septiembre de 2024 y como se informó previamente, los gráficos que muestran las tendencias de CO y H₂ se proporcionan en el **Adjunto D** y se tratan en mayor detalle a continuación.

En agosto de 2025 no se pudieron tomar muestras de CV-2328 porque estuvo fuera de línea para el despliegue del EVOH. El CV-2328 se volvió a conectar el 10 de septiembre de 2025 y se tomaron muestras. Los resultados están disponibles en el **Adjunto A**.

2. Proporcionar datos de lecturas de gases fijos (CH₄, O₂ y CO₂) entre un set de pozos de LFG seleccionado por la LEA. Consulte en la Tabla 1 la columna rotulada "Gas Fijo CH₄, O₂, CO₂".

Los resultados de los pozos monitoreados se proporcionan en el **Adjunto A**.

Como se mencionó arriba, el CV-2328 se volvió a conectar al sistema de recolección de gases el 10 de septiembre de 2025. Los resultados del monitoreo de pozos de septiembre de 2025 se incluyen en el **Adjunto A**.

3. Tomar temperaturas pozo abajo en 34 pozos, para confirmar las lecturas de las temperaturas de los cabezales de los pozos de gas según el requerimiento de los Estándares de Rendimiento de Fuentes Nuevas (NSPS). Consulte en la Tabla 1 en la columna rotulada "Monitoreo de Temperatura Pozo Abajo".

Chiquita entiende de la correspondencia de la LEA del 27 de noviembre de 2024 y como se indica en los informes mensuales previos, que en este momento solo debe tomar muestras de los pozos a la frecuencia anual indicada en los protocolos NSPS, pero que la LEA podrá requerir monitoreos más frecuentes de hasta diez (10) pozos seleccionados por la LEA. Chiquita está a la espera de la selección de la LEA de esos pozos.

¹ Los laboratorios informaron datos de otros pozos de LFG fuera de los seleccionados para que la LEA tome muestras; los datos adicionales están relacionados con requerimientos de informes separados del Distrito de Gestión de la Calidad del Aire de la Costa Sur (AQMD de la Costa Sur) y por lo tanto pueden desestimarse para los propósitos de este informe.

Chiquita proporciona de todos modos en el **Adjunto B** los gráficos de las temperaturas pozo abajo² relacionados con los siguientes pozos, desde lugares fijos, que contienen el Sistema de Bombeo Lorentz con los sensores de temperatura integrales: CV-2303, CV-2315, CV-2350, CV-2351 (9-1 a 9-2) y CV- 24065 (9-1 a 9-27).

Se debe tener en cuenta que la bomba Lorentz y/o el sistema de monitoreo de temperatura de las bombas en CV-2301, CV-2302, CV-2351, CV-2352, CV-24017, CV-24065 y CV-24095 actualmente están fuera de línea debido al despliegue de la geomembrana de EVOH de 60 mils aprobada o a la reubicación interina del parque de tanques o se encuentran en el proceso de ser reparados. (Consulte la Lista de Monitoreos del **Adjunto B**).

Como se indicó previamente, SCS continuará tomando las temperaturas pozo abajo todos los años e informará los resultados a medida que vaya obteniendo datos de cada lugar. (Consulte el **Adjunto B**). Al junio de 2025, SCS ha completado el monitoreo anual de temperaturas pozo abajo de 2025 en todos los lugares solicitados. Sin embargo, para proporcionar más información a la LEA sobre los nuevos Pozos de Extracción de Vapor del Suelo, el monitoreo de la temperatura pozo abajo se realizó por segunda vez este año en el pozo CV-24139 el 18 de agosto de 2025 (el monitoreo anual inicial ocurrió el 10/3/2025) y estos datos se presentaron en el informe de agosto de 2025.

4. Tomar muestras de los 40 pozos seleccionados para analizar VOCs utilizando el método TO-15. Consulte en la Tabla 1, la columna rotulada “VOC (TO-15)”.

Los resultados de los pozos monitoreados se proporcionan en el **Adjunto A**.³ Se debe tener en cuenta que las 40 ubicaciones de toma de muestras de VOC se testearon durante septiembre de 2025.

5. Continuar tomando muestras y monitoreando los 6 pozos horizontales indicados en el Adjunto 1 donde los números de los pozos están resaltados en amarillo. En este momento podrán liberarse 42 pozos horizontales de las tomas de muestras continuas, pero estos pozos podrán ser incluidos más adelante, dependiendo de las futuras presentaciones de datos. Consulte en la Tabla 1 los números de pozo resaltados en azul.

Como se indicó en la carta del 3 de septiembre de 2024 y se informó en los informes mensuales previos, dos (2) de los seis (6) pozos horizontales (H-1774S y H-1560S) fueron abandonados cuando se instalaron los nuevos pozos de extracción vertical y por lo tanto los datos de esos pozos no están incluidos. Los datos de los otros cuatro (4) pozos horizontales están en el **Adjunto A**.

6. Agregar 20 pozos verticales a los protocolos de toma de muestras mensuales de temperatura en el cabezal y de LFG. Consulte en la Tabla 1 los números de pozo resaltados en verde.

Como lo transmitió la LEA durante nuestra reunión del 12 de septiembre de 2024 y se volvió a indicar en nuestro informe mensual, comprendemos que la LEA está requiriendo datos analíticos de laboratorio para gases fijos,

² Cada gráfico indica un punto de datos de temperatura único debido a cambios en el software.

³ El Pozo CV-24142 aparece dos veces en la Tabla 1 de la carta de la LEA del 30 de julio de 2024 - uno requiere tomas de muestras de VOC y el otro no. Chiquita tomó muestras de este pozo para analizar los VOCs.

CO y H2, como también datos de campo. Los resultados del laboratorio están en el **Adjunto A**. Los datos de campo con las temperaturas del gas en el cabezal del pozo se muestran en la Tabla 2 en el **Adjunto A**.

Comprendemos de la correspondencia de la LEA del 27 de noviembre de 2024 que se requerirán datos analíticos del laboratorio para los gases fijos especificados.

Se debe tener en cuenta que nuevamente no se volvieron a tomar muestras en los siguientes pozos en septiembre de 2025 por los siguientes motivos indicados en los informes mensuales previos:

CV-1420 – Abandonado durante la Expansión del GCCS en 2024 debido a la reducción de los flujos de gas.

CV-2202 – Abandonado durante la Expansión del GCCS en 2024 debido a la reducción de los flujos de gas.

CV-2332 – Este pozo no existe. Este pozo fue propuesto para instalación en otoño de 2023, pero se instalaron otros pozos en la zona en lugar del CV-2332 cuando la cantidad de pozos aumentó según la Orden de Depuración Estipulada (la Orden Estipulada) del Distrito de Gestión de la Calidad del Aire de la Costa Sur (AQMD de la Costa Sur)

7. Trazar en el mapa del sitio denominado "Mapa de GCCS Existentes - Pozos de Extracción Vertical de LFG" con fecha 06/06/2024 las ubicaciones de los siguientes 19 pozos: CV-24002, CV-24003, CV-24007, CV-24017, CV-24053, CV-24055, CV-24065, CV-24071, CV-24075, CV-24077, CV-24079, CV-24082, CV-24083, CV-24088, CV-24095, CV-24096, CV-24097, CV-24098 y H-1403W. Para el pozo H-1403W, proporcionar la ubicación horizontal de las tuberías y un estimativo sobre dónde es más probable que ocurran temperaturas elevadas (195°F). Consultar en la Tabla 1 los números de pozo resaltados en rojo y H-1403W (resaltado en amarillo).

Las ubicaciones de los pozos arriba identificados se muestran en el Mapa en el **Adjunto C**.⁴

8. Incluir en el informe mensual un mapa del asentamiento/calor como se muestra a continuación, comenzando con los datos del mapa de calor más antiguo disponible para cada mes hasta el presente. Si es posible, los mapas topográficos deberán mostrar intervalos de contornos de 2 pies.

La LEA le indicó a Chiquita el 2 de junio de 2025 que presente mapas isopáquicos mensualmente para cumplir con esta solicitud. Para facilidad de referencia, estamos presentando como **Adjunto F** una copia del mapa isopáquico de septiembre de 2025.

9. Proporcionar los resultados de las tomas de muestras en un informe independiente apropiado con el análisis, tablas, AQ/QC y métodos, firmado por un profesional registrado, etc., como se describe en los Objetivos 1A-2 y 1A-3 de la Orden de Cumplimiento.

⁴ La LEA reconoció en su correspondencia del 20 de noviembre de 2024 que no están ocurriendo temperaturas altas en el pozo H-1403W. Por lo tanto no trazamos la temperatura máxima en el pozo H-1403W.

CCL ha proporcionado la información arriba solicitada y los datos crudos en el **Adjunto A**, como también una figura con la zona reactiva indicada en base a datos, que incorpora datos de asentamientos Consulte el Adjunto A (consulte el **Adjunto F**). Se proporcionan los gráficos de las temperaturas de los pozos con bombas Lorentz (5 lugares).

Se debe tener en cuenta que además de los pozos indicados en respuesta a la solicitud con fecha 30 de julio de 2024 (en la Tabla 1) que no pudieron ser testeados, tampoco pudieron testearse los siguientes pozos que solo requerían datos analíticos, como se informó previamente, porque fueron abandonados durante la expansión del GCCS de 2024 debido a la reducción de flujos de gas, conforme a los requerimientos del NSPS: CV-100, CV-1532, H-1560S, H-1774S, TC-2385A, TC-2385S, CV-2202 y CV-1420. Finalmente, como también se informó previamente, nunca se instaló el CV-2332.

Procedimientos para la Toma de Muestras

Se tomaron muestras de gas utilizando bolsas Tedlar/Mylar, como se describe en la carta del Chiquita del 3 de septiembre de 2024 y en los informes mensuales que se entregaron a laboratorios certificados para su análisis. Todos los datos de gases permanentes (CH₄, CO₂, O₂, N₂, CO y H₂) fueron analizados dentro de las 24 horas solicitadas desde la toma de las muestras, excepto como se indica a continuación. SCS continúa creyendo que el uso del tiempo de retención de 72 horas aprobado por EPA para estas muestras sería apropiado y correcto. Sin embargo, en respuesta a la correspondencia de la LEA del 17 de marzo de 2025, SCS continuará solicitando tiempos de retención de 24 horas para todos los gases fijos, que incluyen CO, H₂ y VOCs tomados utilizando bolsas Mylar o Tedlar. No obstante, si se requieren más muestras o si los laboratorios tienen un cambio en la carga de trabajo, este tiempo de retención podrá cambiar, caso en el que se le informará a la LEA como corresponda. Durante septiembre de 2025, se testearon los VOCs de todos los pozos (método TO-15 de la EPA) y los gases permanentes (métodos 1946 y Alt-144 de la EPA) dentro de las 24 horas, proporcionándole al laboratorio muestras en bolsas duplicadas como se requiere para análisis de VOC. Se debe tener en cuenta que debido a un problema con los equipos del laboratorio, el 25 de septiembre de 2025 se tuvo que volver a tomar muestras de los siguientes pozos en los que se tomaron muestras el 9 y el 10 de septiembre de 2025 para mantener el tiempo de retención de 24 horas: H- 1770N, CV-1902A, CV-1535, CV-108-52, CV-1532A, CV-2301, CV-2302 y H-2273W. De

estos 8 pozos en los que se tomaron muestras nuevamente el 25 de septiembre de 2025 se analizaron todos dentro de las 24 horas, excepto el CV-108-52 (24 horas 17 minutos) y CV-1902A (24 horas 40 minutos) debido a un problema con los equipos que detuvieron el proceso de toma de muestras y tuvieron que reiniciarse en el laboratorio. Los problemas observados están escritos en las narrativas de los informes del laboratorio.

Se tomaron otros datos de los gases y las presiones utilizando un Medidor de Gas Envision Irwin o un dispositivo de monitoreo de Gases Landtec GEM 5000. Estos instrumentos miden las concentraciones de gas combustible en el aire, directamente en una de dos escalas: la primera, como un porcentaje por volumen del límite explosivo inferior (LEL) de gas metano en el aire (0 a 5 por ciento) y el otro como un porcentaje por volumen (0 a 100 por ciento) en el gas tomado como muestra. El límite de detección de estos instrumentos es de aproximadamente 0.10 por ciento por volumen.

Los procedimientos para testear el monitoreo de gases fueron los siguientes:

- Conectar la tubería de toma de muestras, abrir la válvula de prueba, observar la presión y registrar los datos.
- Encender la bomba de las muestras, purgar un mínimo de un volumen de la sonda y observar y registrar las concentraciones de metano, oxígeno y dióxido de carbono en el gas

cuando se hayan estabilizado las lecturas.

- Cerrar la válvula de prueba, desconectar los instrumentos de toma de muestras y resguardar la ubicación de la muestra.

Conclusiones del Objetivo 1A-3

En septiembre de 2025 se realizó el decimocuarto monitoreo en cumplimiento con el Objetivo 1A-3 de la Orden de Cumplimiento. Los datos tomados en septiembre de 2025 y evaluados para este informe son consistentes con los datos tomados los meses anteriores desde agosto de 2024 hasta agosto de 2025, como también los datos tomados y evaluados por el Comité de la Reacción establecidos bajo la supervisión del AQMD de la Costa Sur y conforme a la Orden Estipulada para evaluar la zona reactiva, que incluyen los datos de septiembre de 2025 más recientemente evaluados por el Comité de la Reacción el 10 de octubre de 2025, como lo requiere la Condición 9(b) de la Orden Estipulada. (Consulte el **Adjunto E.**)

Por los motivos descritos en el informe adjunto del Comité de la Reacción del 10 de octubre de 2025, la alineación del alcance estimado de las condiciones del vertedero de temperaturas elevadas (ETLF) exhibidas en el Vertedero (a las que se hace referencia como límites de la "Zona Reactiva") e identificadas en ese informe continúa igual a las identificadas en el informe del Comité de la Reacción de septiembre de 2025. El Comité de la Reacción determinó que no se justificaba realizar ningún ajuste y que no se habían expandido las condiciones de ETLF. No hubo evidencia de condiciones de la reacción ni gas de la reacción presente fuera del límite de la zona reactiva actualmente delineada.

Como los niveles de líquidos por la instalación de otras Bombas Eléctricas y Neumáticas Lorentz continúan cambiando, continuamos viendo los cambios previstos en porcentajes de Gases Permanentes, Monóxido de Carbono e Hidrógeno y los cambios en las temperaturas ya que puede pasarse extraerse por los pozos de extracción a medida que se van reduciendo los niveles de líquido. Esto se continúa demostrando en los gráficos de los pozos a varias escalas en el **Adjunto D**, que incluyen gráficos de los gases permanentes, temperatura y otras tendencias en un período de seis (6) meses. Se debe tener en cuenta que los gráficos fueron creados utilizando resultados de equipos de monitoreo de biogás estándar y los resultados no contienen datos de laboratorio. SCS también incluyó gráficos de Hidrógeno y Monóxido de Carbono separados utilizando los resultados del laboratorio, para su uso y revisión de cada pozo.

Además, la instalación de tuberías de mayor diámetro ha mejorado la recolección de otros gases de todo el Vertedero. Desde marzo de 2025, los índices de flujo de biogás que queman los dispositivos de depuración variaron de 13,500 cfm a 16,000 cfm. Durante septiembre de 2025, la extracción de gas general Septiembre Vertedero fue de aproximadamente 653,669,568 pies cúbicos. Se espera que este índice de extracción de biogás y los futuros aumentos previstos a este índice de extracción a medida que continúan expandiéndose los sistemas de recolección mejorarán la composición del gas de los pozos en la zona reactiva a medida que más vacío y el movimiento de gas resultante vaya permitiendo que se extraiga más gas de la reacción y del vertedero normal.

Chiquita continuará evaluando los datos en futuros informes mensuales, a medida que se vayan tomando más datos.

Puntos de Cumplimiento con el Objetivo 5

Este informe incluye en el **Adjunto D** mapas individuales superpuestos con los siguientes datos para septiembre de 2025, en un formato fácil de comprender, conforme al Objetivo 5 de la Orden de Cumplimiento.

- Zona reactiva definida;
- Expansión de la zona reactiva, si hubiera;
- Datos semanales de TMP; y
- Datos de LFG que incluyen, de forma enunciativa más no limitativa, datos de CH₄, CO₂, O₂, Temperatura CO y de H₂.

El Objetivo 5 además requiere "asentamiento con mapas de calor", pero como se analizó al principio de este informe y conforme a la correspondencia de la LEA con fecha 27 de noviembre y 3 de diciembre de 2024, este requerimiento se cumple con la presentación de Chiquita de sus mapas isopáquicos mensuales presentados a la LEA. Para practicidad de la LEA, el mapa isopáquico de septiembre de 2025 se incluye aquí como **Adjunto F**.

Los abajo firmantes son un profesional matriculado y un Gerente Regional, Vicepresidente de SCS Engineers.

Atentamente,

William C. Haley, PE

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S090202-01/10

Enclosed are the results for sample(s) received 9/2/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Vinyl acetate and bromoform exhibited low recovery in the initial calibration verification indicating possible low bias. Results have been flagged with the Q qualifier.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results have been flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/11/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson" with a stylized flourish at the end.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S090301-01/09

Enclosed are the results for sample(s) received 9/3/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Vinyl acetate and bromoform exhibited low recovery in the initial calibration verification indicating possible low bias. Results have been flagged with the Q qualifier.
- Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results have been flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/12/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S090403-01/11

Enclosed are the results for sample(s) received 9/4/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. Vinyl acetate and bromoform exhibited low recoveries in the initial calibration verification indicating possible low bias. Results are flagged with the Q qualifier. Ethyl acetate exhibited high recovery in the initial calibration verification indicating a high bias. Results above the reporting limit are flagged with the Q qualifier.
- The closing continuing calibration verification for ASTM D1946 exhibited high recovery for the lower detection of carbon dioxide and methane. Results were confirmed outside of holding -time and are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S090801-01/11

Enclosed are the results for sample(s) received 9/8/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. Vinyl acetate and bromoform exhibited low recoveries in the initial calibration verification indicating possible low bias and are flagged with the Q qualifier. Ethyl acetate exhibited high recovery in the initial calibration verification indicating a high bias. Results above the reporting limit are flagged with the Q qualifier. Hexachlorobutadiene exhibited low recovery in the continuing calibration verification indicating possible low bias and are flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S090904-01/10

Enclosed are the results for sample(s) received 9/9/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were received in Mylar bags. Benzyl chloride required quadratic regression calibration.
- The TO-15 analyses were performed outside the 24-hr holding-time due to an instrument fault.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson" with a stylized flourish at the end.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S091007-01/10

Enclosed are the results for sample(s) received 9/10/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were received in Mylar bags. Benzyl chloride required quadratic regression calibration.
- The TO-15 analyses were performed outside the 24-hr holding-time due to low liquid nitrogen pressure.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson" with a stylized flourish at the end.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S091102-01/07

Enclosed are the results for sample(s) received 9/11/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. Benzyl chloride required quadratic regression calibration.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/26/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S091508-01/03

Enclosed are the results for sample(s) received 9/15/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were received in Mylar bags. Benzyl chloride required quadratic regression calibration.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/29/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mark Johnson".

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S092505-01/08

Enclosed are the results for sample(s) received 9/25/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. Benzyl chloride required quadratic regression calibration.
- Samples S092505-07 (CV-108-52) and S092505-08 (CV-1902A) were analyzed 17 minutes and 40 minutes respectively outside the 24-hr holding-time. The samples were initially analyzed within holding-time but a data acquisition error caused a loss of the data files.
- performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 9/26/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

A handwritten signature in blue ink that reads "Mark Johnson".

Thirty Day Maximum Vertical Temperature Map from Temperature Probes at the Chiquita Canyon Landfill - September 2025

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 7/24/2025 to 9/3/2025

From August 28, 2025, through September 3, 2025, there were two recorded temperature decreases and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-07
 - The 60-foot thermocouple showed an anomalous reading on August 21st of 198°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-07 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.
- TP-08
 - The 30-foot thermocouple showed an increase in maximum temperature of 10°F from 149°F to 159°F from September 1st to September 3rd.
- TP-13
 - The 30-foot thermocouple showed a decrease in maximum temperature of 10°F from 152°F to 142°F from August 25th to September 1st.
- TP-15
 - The 30-foot thermocouple showed a decrease in maximum temperature of 10°F from 186°F to 176°F from August 21st to August 28th.
- TP-35
 - All thermocouples were temporarily offline on September 2nd for the repair of the thermocouple casing. As a result, all maximum readings on September 2nd are erroneous.

From September 11, 2025, through September 17, 2025, there was one recorded temperature decrease and four recorded temperature increases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-07
 - The 60-foot thermocouple showed an anomalous reading on August 21st of 198°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-07 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.
- TP-08
 - The 45-foot thermocouple remained consistent with previous recorded temperatures.
 - The 150-foot thermocouple showed an anomalous reading on September 15th of 224°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-08 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.
 - The 150-foot thermocouple showed an increase in maximum temperature of 10°F from 169°F to 179°F from September 16th to September 17th.
- TP-11
 - The 15-foot thermocouple showed an increase in maximum temperature of 18°F from 134°F to 152°F from September 14th to September 17th.
- TP-13
 - The 30-foot thermocouple showed an increase in maximum temperature of 15°F from 134°F to 149°F from September 9th to September 12th, and then a decrease in maximum temperature of 13°F from 149°F to 136°F from September 12th to September 17th.
- TP-15
 - The 30-foot thermocouple showed an increase in maximum temperature of 23°F from 168°F to 191°F from September 15th to September 17th.
- TP-35
 - All thermocouples were temporarily offline on September 2nd for the repair of the thermocouple casing. As a result, all maximum readings on September 2nd are erroneous.

From September 18, 2025, through September 24, 2025, there were two recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-07
 - As previously reported, the 60-foot thermocouple showed an anomalous reading on August 21st of 198°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-07 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.
- TP-08
 - As previously reported, the 150-foot thermocouple showed an anomalous reading on September 15th of 224°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-08 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous. The 150-foot thermocouple remained consistent with previous recorded temperatures.
- TP-11
 - The 15-foot thermocouple remained consistent with previous recorded temperatures.
- TP-13
 - The 30-foot thermocouple showed a decrease in maximum temperature of 15°F from 149°F to 134°F from September 12th to September 19th.
- TP-15
 - The 30-foot thermocouple remained consistent with previous recorded temperatures.
- TP-21
 - The 60-foot thermocouple showed a decrease in maximum temperature of 12°F from 181°F to 169°F from September 17th to September 24th.
- TP-35
 - As previously reported, all thermocouples were temporarily offline on September 2nd for the repair of the thermocouple casing. As a result, all maximum readings on September 2nd are erroneous.

Subject: Monthly Reaction Committee Determination on Reaction Area Boundary
Chiquita Canyon Landfill – Castaic, California

Dear Mr. Chen:

In accordance with Condition Nos. 9a and 9b of the Modified Stipulated Order for Abatement (SOFA) pertaining to the Chiquita Canyon Landfill (Landfill or Facility) (Case No. 6177-4), the Reaction Committee has reviewed newly acquired applicable data recorded during the month of September 2025, considered revisions of the estimated extent of elevated temperature landfill (ETLF) conditions exhibited at the subject Facility (referred to as the “Reaction Area” limits), and has prepared this determination on potentially revising the Reaction Area map.

Attachment A presents the Drawing, titled “Reaction Area Map”, prepared by SCS Engineers (SCS) and dated October 1, 2025. The Drawing depicts the Reaction Area boundary as prescribed in Condition No. 9a, which corresponds to the limits of Cells 1/2A, 2B/3, 4, and Module 2B/3/4 P2, as a solid black line. The Drawing also depicts the estimated extent of ETLF conditions being experienced at the site based on the Reaction Committee’s review of scientific data as a dashed magenta line. The rationale that serves as the basis for considering adjustments and modifications to the Reaction Area boundary (or the determination to maintain the decreed boundary), include the following:

- Landfill Gas (LFG) wellhead temperatures in excess of approximately 160 degrees Fahrenheit.
- Poor gas quality (defined as methane levels of less than 30 percent) in conjunction with methane-to-carbon dioxide (CH₄:CO₂) ratios less than 1.0.
- The concentration of hydrogen (H₂) in the LFG measured greater than 2 percent by volume.
- The concentration of carbon monoxide (CO) in the LFG measured greater than 2,000 ppm.
- Accelerated settlement of the landfill surface, defined as approximately 18 inches or greater within a 60-day period, and cracks in landfill cover. This corresponds to a strain value (i.e., settlement rate) rate of 3 percent per year for areas with a 300-foot waste column depth, which we believe is a reasonable average depth in the subject area of interest.
- First-hand observations of Landfill and/or SCS engineering, construction, and operations and maintenance (O&M) field personnel who are on-site related to: 1) atypical excess leachate quantities (presence and quantity of liquids); 2) instances of pressurized liquids emitting from the landfill surface, from boreholes during drilling, and from LFG wells; and, 3) the

characteristics of the odors originating from the select areas of the waste footprint (often described as “chemical-like” and distinctly different from typical LFG or landfill working face odors).

- Observations of subsurface waste conditions and characteristics as noted on borehole drilling logs for recently installed new wells and/or probes.
- Subsurface temperatures recorded at the in-situ waste temperature probes during September 2025.
- Temperature of gas or liquids measured at depth within the LFG well riser pipe (using an automated transmitter or manual field instrumentation).
- Subsurface temperature and pressures associated with drilling activities for new LFG extraction wells during September 2025.

CONSIDERATIONS FOR POTENTIAL ADJUSTMENTS TO THE ESTIMATED EXTENT OF ETLF CONDITIONS (DASHED MAGENTA LINE)

In making its monthly determinations, the Reaction Committee evaluates the above set of data parameters, in conjunction with one another, to identify meaningful trends indicating ETLF conditions, as opposed to fluctuations exhibited in isolated datapoints.

Each month, the Reaction Committee scrutinizes particular areas of the Landfill that have previously exhibited abnormal or fluctuating data, when applicable. As discussed below, despite minor variances in discrete areas of the landfill, the Reaction Committee has not discerned any meaningful trends with respect to the September 2025 data that would indicate the reaction has expanded into these areas.

Near CV-24009

Well CV-24009 is positioned within 60 feet or so of the delineated boundary line. This well recorded a maximum LFG wellhead temperature of 161 degrees F during September, however the average LFG wellhead temperature measured during July through September for this well was 156 degrees F.

The LFG quality is marginal at CV-24009, which exhibited an average methane (CH₄) concentration of 18 percent during July through September, and the methane-to-carbon dioxide (CH₄:CO₂) ratio in September was 0.18. The hydrogen (H₂) concentration measured in September was 7.5 percent.

The Reaction Committee has identified gas movement from within the Reaction Area via existing horizontal collectors as the potential cause of the heat and longer-term trend of marginal to poor quality gas at these wells. Specifically, well CV-24009 is positioned immediately adjacent to H-1769 (at an elevation of 1335 feet), which extends hundreds of feet into the Reaction Area, so it is possible that the source of the heat and reaction gas at this vertical well is offset some distance away and is being conveyed toward the wells by the horizontal collectors' piping and trench. In addition, CV-24009 is equipped with a dedicated dewatering pump, so the recent increase in temperatures and the presence of increased reaction gas (as opposed to typical landfill gas) may be

attributable to the lowering of perched leachate levels in this vicinity, which is enabling movement of heat and gas through the void spaces.

Near CV-113

Well CV-113 is positioned approximately 300 feet or so beyond the delineated boundary. This well has experienced increased temperatures since July and recorded a maximum LFG wellhead temperature of 178 degrees F during September.

The LFG quality is poor at CV-113, which exhibited an average CH₄ concentration of 2 percent during July through September, and the CH₄:CO₂ ratio in September was 0.01. The H₂ concentration measured in September was 6.7 percent.

This well does not appear to be in the vicinity of any horizontal collectors that extend out from the Reaction Area and the well is not equipped with a pump. However, the surrounding LFG wells exhibit substantially lower temperatures and more typical LFG composition and well CV-113 exhibited significantly lower temperatures prior to August. Accordingly, the Reaction Committee will continue to monitor the conditions at this well.

Near CV-2333 and CV-24126

Well CV-2333 is positioned within 50 feet or so of the delineated boundary and the well is co-located with temperature probe TP-18. Well CV-24126 is positioned within 100 feet or so of the delineated boundary. Well CV-24126 recorded a maximum LFG wellhead temperature of 186 degrees F during September, however the average LFG wellhead temperature measured during July through September at this well was 159 degrees F. The average LFG wellhead temperature at adjacent well CV-2333 measured during July through September was 135 degrees F. The deepest thermocouple in TP-18 is positioned 45 feet below the landfill surface and has demonstrated increasing temperatures over the past six weeks, most recently indicating an in-situ waste temperature of 162 degrees F.

The LFG quality is poor at CV-2333, which exhibited an average CH₄ concentration of 2 percent during July through September. The H₂ concentration measured in September was 13 percent. The LFG quality is also poor at CV-24126, which exhibited an average CH₄ concentration of 5 percent during July through September, and the CH₄:CO₂ ratio in September was 0.05.

The Reaction Committee has identified gas movement from within the Reaction Area via existing horizontal collectors as the potential cause of the heat and longer-term trend of marginal to poor quality gas at these wells. Specifically, well CV-24126 is positioned immediately adjacent to H-1772 (at an elevation of 1353 feet), which extends south along the Reaction Area border, so it is possible that the source of the heat and reaction gas at this vertical well is offset some distance away and is being conveyed toward the wells by the horizontal collectors' piping and trench. In addition, CV-2433 is equipped with a dedicated dewatering pump (CV-24126 is not), so the heat and the presence of increased reaction gas (as opposed to typical landfill gas) may be attributable to the lowering of perched leachate levels in this vicinity, which is enabling movement of heat and gas through the void spaces.

Near CV-2541

Well CV-2541 is positioned within about 25 feet of the delineated boundary line. It is positioned immediately adjacent to horizontal collectors H-54 (at an elevation of 1225 feet) and H-1564 (at an elevation of 1245 feet), both of which extend hundreds of feet into the Reaction Area. During September, well CV-2541 recorded a maximum LFG wellhead temperature of 167 degrees F, but the average temperature during July through September was 151 degrees F. The average LFG wellhead temperature measured in the adjacent well CV-24068 during July through September was 142 degrees F.

The LFG quality is poor at CV-2541, which exhibited an average CH₄ concentration of 14 percent during July through September. The hydrogen concentration measured at well CV-2541 in September was 5.9 percent. The LFG quality is marginal at CV-24068, which exhibited an average CH₄ concentration of 20 percent during July through September.

Considering the most recent temperatures are relatively low for ETLF conditions, along with the proximity to horizontal collectors, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of CV-2541 is warranted at this time.

Near CV-2344

Well CV-2344 is positioned within 100 feet or so of the delineated boundary. Well CV-2344 recorded a maximum LFG wellhead temperature of 161 degrees F during September, however the average LFG wellhead temperature measured during July through September at this well was 151 degrees F. The maximum in-situ waste temperature recorded in September at TP-05 was only 156 degrees F. The LFG quality at CV-2344 is poor, with an average CH₄ concentration of 14 percent during July through September, and the methane-to-carbon dioxide (CH₄:CO₂) ratio in September was 0.36. The hydrogen (H₂) concentration measured in September was 6.7 percent.

Considering the temperatures at TP-05 and CV-2344 are relatively low for ETLF conditions, along with the proximity to horizontal collector H-1356 (at an elevation of 1278 feet), the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of CV-2344 is warranted at this time.

TEMPERATURE MONITORING PROBE DATA

The Reaction Committee reviewed the temperature measurements recorded during September 2025 by the in-situ temperature monitoring probes. As of September 2025, six of the 32 probes (TP-2, TP-3, TP-9, TP-11, TP-15, and TP-21) are located within the current estimated extent of ETLF conditions (dashed magenta line). Of the remaining 26 probes positioned outside of the boundary, twelve probes are positioned within relatively close proximity (within 200 feet) of this boundary. It is the Reaction Committee's opinion that the temperatures recorded by the 26 probes outside of the boundary during September 2025 are not indicative of a subsurface reaction and do not substantiate a decision to adjust the boundary of the Reaction Area at this time.

Several considerations related to data consistency and reliability are noted below:

- TP-08: The 150-foot depth thermocouple at TP-08 exhibited an anomalous reading on September 15th of 224 degrees F for a single one-hour reading; however, subsequent readings were generally consistent with previous recorded temperatures and no other thermocouples at TP-08 demonstrated corresponding significant changes in temperatures, indicating that this recorded temperature increase was most likely erroneous. Since this instance, the 150-foot thermocouple has periodically recorded daily temperature fluctuations of 8 to 10 degrees, which is somewhat atypical. These fluctuations could be attributed to the probe being co-located with LFG extraction well CV-24079, which is equipped with an operational dewatering pump.
- TP-35: All thermocouples in TP-35 were temporarily offline on September 2nd for the repair of the thermocouple casing. As a result, all maximum readings on this date are erroneous.

During September, the 15-foot depth thermocouple at TP-01 continued to demonstrate the gradual increase in temperature that has been ongoing for several months, in which the temperature has increased from approximately 120 degrees F, as recorded in early April 2025, to approximately 166 degrees F during late September. During this same timeframe, the other thermocouples within TP-01 have recorded consistent temperatures from week to week and are not exhibiting corresponding increases in temperature. Furthermore, a review of the wellhead monitoring data for wells positioned near TP-1 (CV-2326, CV-2335, CV-2336, CV-24006, and CV-24011) did not indicate corresponding increases in temperatures or other characteristics of the reaction. There are two horizontal collectors near TP-01, but they are not positioned in the shallow 15-foot zone. Field personnel at the site are investigating the ability to check the validity of the data and to replace the 15-foot thermocouple. Nevertheless, at this time, and for the reasons described above, the Reaction Committee does not believe this increase suggests the presence of ETLF conditions within the waste mass at this location.

The Reaction Committee evaluated the 30-day maximum temperatures recorded in TP-24, TP-26, TP-29, TP-30, and TP-31, which have remained relatively consistent over the previous 6-week period of August 21 through October 1, 2025 (except for a short-term fluctuation at the 240-foot interval in TP-29 for 1 day in mid-September). The abrupt increase at the 240-foot thermocouple in TP-29, from 183 degrees F to 193 degrees F and then back down to 184 degrees F over a 1-day period in mid-September, is irregular. The average daily maximum temperature at this thermocouple during September is approximately 184 degrees F.

The maximum temperatures recorded during September at the deeper thermocouples in TP-26 and TP-30 of 175 degrees F and 171 degrees F, respectively, are not significantly elevated for deeper waste zones and there is significant differentiation between the 30-day maximum temperatures in these five probes compared to the 30-day maximum temperatures measured at the four probes within the current estimated extent of ETLF conditions (dashed magenta line), specifically TP-3, TP-9, TP-15, and TP-21.

The maximum temperatures recorded during September at the deeper thermocouples in TP-24 and TP-31 of 192 degrees F and 188 degrees F, respectively, are somewhat greater than similar depth-intervals in the other 26 probes outside of the Reaction Area and the Reaction Committee noted there is less differentiation between the 30-day maximum temperatures in these two probes compared to the 30-day maximum temperatures measured at the four probes within the current estimated extent of ETLF conditions (dashed magenta line),

specifically TP-3, TP-9, TP-15, and TP-21. However, the four wells surrounding TP-24 recorded average LFG wellhead temperatures during July through September ranging from 101 degrees F to 119 degrees F and average methane concentrations between 27 and 46 percent. The three wells surrounding TP-31 recorded average LFG wellhead temperatures during July through September ranging from 114 degrees F to 137 degrees F. While the average methane concentration at CV-2319 is 19 percent, the average methane content at CV-24111 during the past three months was 42 percent. So, the wells surrounding these two probes do not exhibit evidence of atypical heat or the LFG composition associated with ETLF conditions.

Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of TP-24, TP-26, TP-29, TP-30, and TP-31 is warranted at this time.

HYDROGEN CONCENTRATIONS

The Reaction Committee also evaluated the concentration of hydrogen in LFG during September 2025. Recall that certain wells positioned to the south and east of the Reaction Area boundary (where dewatering pumping was reactivated) have periodically demonstrated some increased hydrogen content in the LFG during the Reaction Committee's review of the data in previous months, which similarly was the case for the September 2025 data. The Reaction Committee noted in its review of the data that, other than wells CV-113 and CV-2344, these wells did not exhibit elevated temperatures. There was no evidence of the increased heat that is typical with ETLF conditions at the wells exhibiting atypical hydrogen concentrations (except wells CV-113 and CV-2344). As noted previously, the Reaction Committee suspects this increased hydrogen content may be attributable to substantial dewatering being accomplished throughout the Reaction Area and may be associated with gas movement from within the Reaction Area by existing horizontal collectors in close proximity. Thus, the presence of elevated hydrogen in these isolated locations does not suggest that ETLF conditions are expanding south and east of the delineated boundary. Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area is warranted at this time.

CONCLUSION

As presented on the Drawing included as **Attachment A**, the estimated extent of ETLF conditions (dashed magenta line) is fully contained within the Reaction Area boundary decreed in the SOFA (solid black line). Because the ETLF conditions are fully contained within the Reaction Area boundary and have not expanded into a new cell, the Reaction Committee finds no basis to modify the Reaction Area boundary as prescribed in Condition 9a at this time.

There was no dissenting opinion among the Reaction Committee members regarding this monthly determination. Supporting data is presented on the Drawing included as **Attachment A**. The maximum temperature measurements recorded at the 32 in-situ waste temperature monitoring probes (both 7-Day and 30-Day values) during September are presented in **Attachment B** in graphical format. The LFG wellhead temperatures recorded at the extraction wells for the entire Landfill footprint are reflected on the isothermal gradient range map presented as **Attachment C**. The CH₄:CO₂ ratios measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment D**. The H₂ concentrations measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are

depicted on the range map presented as **Attachment E**. The CO concentrations measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment F**. The landfill surface settlement isopach values measured on a quarterly basis (July 2, 2025 compared to October 1, 2025) in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment G**. The electronic database and recordkeeping platform enables these measurements to be downloaded into a tabular spreadsheet format, which can be submitted to the South Coast Air Quality Management District under separate cover, if requested.

ATTACHMENT B

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 8/21/2025 to 10/1/2025

SCS ENGINEERS

07224053.00 | October 2, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From September 25, 2025, through October 1, 2025, there was one recorded temperature increase and three recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-07
 - As previously reported, the 60-foot thermocouple showed an anomalous reading on August 21st of 198°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-07 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous.
- TP-08
 - As previously reported, the 150-foot thermocouple showed an anomalous reading on September 15th of 224°F for a single one-hour reading; however, subsequent readings were consistent with previous recorded temperatures and no other thermocouples at TP-08 showed any such changes in temperatures, indicating that this recorded temperature increase was most likely erroneous. The 150-foot thermocouple remained consistent with previous recorded temperatures.
 - The 150-foot thermocouple showed a decrease in maximum temperature of 10°F from 179°F to 169°F from September 23rd to September 26th, then an increase maximum temperature of 12°F from 169°F to 181°F from September 26th to September 30th, and then a decrease in maximum temperature of 12°F from 181°F to 169°F from September 30th to October 1st.
- TP-13
 - The 30-foot thermocouple remained consistent with previous recorded temperatures.
- TP-21
 - The 60-foot thermocouple showed a decrease in maximum temperature of 10°F from 176°F to 166°F from September 20th to September 27th.
- TP-35
 - As previously reported, all thermocouples were temporarily offline on September 2nd for the repair of the thermocouple casing. As a result, all maximum readings on September 2nd are erroneous.

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-1

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-2

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-3

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-4

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-5

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-6

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-7

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-8

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-9

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-10

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-11

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-12

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-13

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-14

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-15

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-16

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-17

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-18

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-19

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-20

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-21

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-24

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-25

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-26

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-27

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-28

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-29

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-30

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-31

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-32

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-34

Maximum data for 8/21/2025 to 10/1/2025

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-35

Maximum data for 8/21/2025 to 10/1/2025

Maximum Vertical Temperature Map from Temperature Probes at Chiquita Landfill

Thirty Day Maximum Vertical Temperature Map from Temperature Probes at the Chiquita Canyon Landfill - September 2025

Ranges Mapped	
	# Points
■ ≥ 0 and < 0.5	128
■ ≥ 0.5 and < 0.9	74
■ ≥ 0.9 and < 1.1	49
■ ≥ 1.1 and < 1.5	64
■ ≥ 1.5 and < 101	2

Point Type Legend

- ▽ calibration record
- ◇ flare-engine-ghg
- △ monitoring probe
- sample port
- well

ATTACHMENT D

Chiquita Canyon Landfill
Range Map
Parameter: CH₄/CO₂ Ratio (high range)
Analysis Method: Average

Date Range: 09/01/2025 - 09/30/2025

Map generation date : 10/09/2025

Ranges Mapped

	# Points
■ ≥ 0 and < 20000	18
■ ≥ 20000 and < 50000	16
■ ≥ 50000 and < 100000	18
■ ≥ 100000 and < 999999	41

The range values noted above are in units of parts per million (ppm). Divide by 10,000 to convert these values to units of percent by volume.

Point Type Legend

- ▽ calibration record
- ◇ flare-engine-ghg
- △ monitoring probe
- sample port
- well

ATTACHMENT E

Chiquita Canyon Landfill Range Map

Parameter: H2 (mid range)

Analysis Method: Average
