Subject: Case No. 6177-4 Stipulated Order for Abatement – Condition 53 Weekly Report

Importance: Normal

Sensitivity: None

[EXTERNAL SENDER: Use caution with links/attachments]

All,

In accordance with Condition 53 of the Stipulated Order, Chiquita provides the following information for the week of June 23 through June 29. Chiquita is providing this information to the best of its knowledge; this information is subject to change based on further review and verification.

(1) number of tanks in each leachate tank group;

There are currently 269 leachate frac tanks at the Chiquita Canyon Landfill:

#1 Top Deck Tank Manifold: 0

#2 East Perimeter Manifold: 4

#4 LC Manifold: 1

#6 North Perimeter Manifold: 4

#7 Tank Farm: 106

#9 Tank Farm: 37

#10 Canyon D: 31

Staging area, not in use: 80

Need Repair: 6

(2) total number of leachate tanks treated;

Chiquita treated 58 tanks during the weekly period. Chiquita treated 2,638 tanks from February 17, 2024 (the beginning of treatment) through December 31, 2024, and 1,885 tanks from January 1, 2025 through June 29, 2025. Note that upon further review, the total values in this report were updated to more accurately reflect the total number of tanks treated since treatment began.

(3) weekly and year-to-date total quantity of liquid collected;

Chiquita estimates that it collected approximately 1,653,550 gallons of liquid during the weekly period (not counting flare condensate). Chiquita estimates that it collected approximately 62,574,018 gallons from January 1, 2024 to December 31, 2024 (not counting flare condensate), and approximately 44,438,025 gallons from January 1, 2025 through June 29, 2025.

(4) weekly and year-to-date total quantity of liquid treated;

Assuming 17,000 gallons per tank, Chiquita treated approximately 1,155,541 gallons during the weekly period. Chiquita estimates that it treated approximately 46,368,981 gallons from February 17, 2024 (the beginning of treatment) to December 31, 2024, and approximately 32,416,324 gallons from January 1, 2025 through June 29, 2025.

(5) estimated weekly and year-to-date total quantity of seeping, pooling, or ponding leachate collected.

Chiquita observed no leachate seeps, pooling, or ponding during the weekly period. The year-to-date estimate from first quarter of 2024 to December 31, 2024, is approximately 175,051 gallons. The year-to-date estimate for January 1, 2025 through June 29, 2025 is less than 180 gallons. These numbers are based on Chiquita's twice-daily inspections* of leachate seeps/pooling and the logged estimates of the number of gallons of seeping/pooling leachate, as well as

estimates of stormwater and leachate pumped from the dammed stormwater channel during storm events early in the year. This overestimates the amount of leachate collected because it includes these previously reported events where leachate seepage entered the channel and came into contact with stormwater. Note that the volume of any leachate seeps/pooling that are collected is also captured in the totals under #3, because those liquids are transferred to the frac tanks for eventual disposal. Also note that Chiquita continues to report leachate leaks/spills separately, pursuant to Condition 27(e) of the Stipulated Order.

* Please note, as a result of the June 26, 2025 loss of power and evacuation of the facility due to a wildland fire, Chiquita personnel were unable to perform seep inspections pursuant to Condition 27(c) on the afternoon of June 26, 2025. Chiquita personnel returned to the site on the same day, once the fire was suppressed, and resumed these inspections on the morning of June 27, 2025.

Regards,

Amanda Froman
