Subject: Case No. 6177-4 Stipulated Order for Abatement – Condition 53 Weekly Report
Importance: Normal
Sensitivity: None

[EXTERNAL SENDER: Use caution with links/attachments]

All,

In accordance with Condition 53 of the Stipulated Order, Chiquita provides the following information for the week of September 15 through September 21. Chiquita is providing this information to the best of its knowledge; this information is subject to change based on further review and verification.

(1) number of tanks in each leachate tank group;

There are currently 293 leachate frac tanks at the Chiquita Canyon Landfill:

#1 Top Deck Tank Manifold: 0
#2 East Perimeter Manifold: 3
#4 LC Manifold: 1
#6 North Perimeter Manifold: 2
#7 Tank Farm: 47
#9 Tank Farm: 0
#10 Canyon D: 32
#13 Tank Farm: 118
Staging area, not in use: 85
Need Repair: 5

(2) total number of leachate tanks treated;

Chiquita treated 54 tanks during the weekly period. Chiquita treated 2,638 tanks from February 17, 2024 (the beginning of treatment) through December 31, 2024, and 2,488 tanks from January 1, 2025 through September 21, 2025. Note that upon further review, the total values in this report were updated to more accurately reflect the total number of tanks treated since treatment began.

(3) weekly and year-to-date total quantity of liquid collected;

Chiquita estimates that it collected approximately 1,811,200 gallons of liquid during the weekly period (not counting flare condensate). Chiquita estimates that it collected approximately 57,085,312 gallons from January 1, 2024 to December 31, 2024 (not counting flare condensate), and approximately 64,252,006 gallons from January 1, 2025 through September 21, 2025.

(4) weekly and year-to-date total quantity of liquid treated;

Assuming 17,000 gallons per tank, Chiquita treated approximately 788,624 gallons during the weekly period. Chiquita estimates that it treated approximately 46,368,981 gallons from February 17, 2024 (the beginning of treatment) to December 31, 2024, and approximately 42,458,705 gallons from January 1, 2025 through September 21, 2025. Note that upon further review, the total values in this report were updated to more accurately reflect the total number of gallons treated since treatment began.

(5) estimated weekly and year-to-date total quantity of seeping, pooling, or ponding leachate collected.

Chiquita observed no leachate seeps, pooling, or ponding during the weekly period. The year-to-date estimate from first quarter of 2024 to December 31, 2024, is approximately 175,051 gallons. The year-to-date estimate for January 1, 2025 through September 21, 2025 is less than 180 gallons. These numbers are based on Chiquita's twice-daily inspections of leachate seeps/pooling and the logged estimates of the number of gallons of seeping/pooling leachate, as well as estimates of stormwater and leachate pumped from the dammed stormwater channel during storm events early in the year. This overestimates the amount of leachate collected because it includes these previously reported events where leachate seepage entered the channel and came into contact with stormwater. Note that the volume of any leachate seeps/pooling that are collected is also captured in the totals under #3, because those liquids are transferred to the frac tanks for eventual disposal. Also note that Chiquita continues to report leachate leaks/spills separately, pursuant to Condition 27(e) of the Stipulated Order.

Regards,

Amanda Froman
