**Subject:** Case No. 6177-4 Stipulated Order for Abatement – Condition 53 Weekly Report  
**Importance:** Normal  
**Sensitivity:** None

---

**[EXTERNAL SENDER: Use caution with links/attachments]**

All,

In accordance with Condition 53 of the Stipulated Order, Chiquita provides the following information for the week of December 1 through December 7. Chiquita is providing this information to the best of its knowledge; this information is subject to change based on further review and verification.

Further, in accordance with the newly modified Stipulated Order, Chiquita will be providing this information on a monthly basis as part of the Condition 8 reports. This will be the final weekly report.

**(1) number of tanks in each leachate tank group;**

There are currently 264 leachate frac tanks at the Chiquita Canyon Landfill:

#1 Top Deck Tank Manifold: 0  
#2 East Perimeter Manifold: 0  
#4 LC Manifold: 1  
#6 North Perimeter Manifold: 0  
#7 Tank Farm: 25  
#9 Tank Farm: 0  
#10 Canyon D: 37  
#13 Tank Farm: 160  
Staging area, not in use: 38  
Need Repair: 3

**(2) total number of leachate tanks treated;**

Chiquita treated 40 tanks during the weekly period. Chiquita treated 2,638 tanks from February 17, 2024 (the beginning of treatment) through December 31, 2024, and 3,052 tanks from January 1, 2025 through December 7, 2025. Note that upon further review, the total values in this report were updated to more accurately reflect the total number of tanks treated since treatment began.

**(3) weekly and year-to-date total quantity of liquid collected;**

Chiquita estimates that it collected approximately 2,799,097 gallons of liquid during the weekly period (not counting flare condensate). Chiquita estimates that it collected approximately 57,085,312 gallons from January 1, 2024 to December 31, 2024 (not counting flare condensate), and approximately 92,276,642 gallons from January 1, 2025 through December 7, 2025.

**(4) weekly and year-to-date total quantity of liquid treated;**

Assuming 17,000 gallons per tank, Chiquita treated approximately 860,875 gallons during the weekly period. Chiquita estimates that it treated approximately 46,368,981 gallons from February 17, 2024 (the beginning of treatment) to December 31, 2024, and approximately 51,923,029 gallons from January 1, 2025 through December 7, 2025. Note that upon further review, the total values in this report were updated to more accurately reflect the total number of gallons

treated since treatment began.

**(5) estimated weekly and year-to-date total quantity of seeping, pooling, or ponding leachate collected.**

Chiquita observed no leachate seeps, pooling, or ponding during the weekly period. The year-to-date estimate from first quarter of 2024 to December 31, 2024, is approximately 175,051 gallons. The year-to-date estimate for January 1, 2025 through December 7, 2025 is less than 180 gallons. These numbers are based on Chiquita's twice-daily inspections of leachate seeps/pooling and the logged estimates of the number of gallons of seeping/pooling leachate, as well as estimates of stormwater and leachate pumped from the dammed stormwater channel during storm events early in the year. This overestimates the amount of leachate collected because it includes these previously reported events where leachate seepage entered the channel and came into contact with stormwater. Note that the volume of any leachate seeps/pooling that are collected is also captured in the totals under #3, because those liquids are transferred to the frac tanks for eventual disposal. Also note that Chiquita continues to report leachate leaks/spills separately, pursuant to Condition 27(e) of the Stipulated Order.

Thank you,

Amanda Froman
