Subject: **December 2025 Monthly Report Pursuant to Milestones 1A-3 and 5 of the LEA June 6, 2024 Compliance Order and July 30, 2024 Letter, Chiquita Canyon Landfill, Castaic, California**

Dear Ms. Gork:

SCS Engineers (SCS), on behalf of Chiquita Canyon, LLC (Chiquita), hereby provides the Los Angeles County Department of Public Health, Solid Waste Management Program, acting as the Local Enforcement Agency (LEA) with a monthly report pursuant to Milestones 1A-3 and 5 of the LEA Compliance Order dated June 6, 2024 (Compliance Order) and subsequent related correspondence received from the LEA. This report covers the monthly period for December 2025.

Chiquita Canyon Landfill (CCL or Landfill) is a landfill/solid waste disposal facility located at 29201 Henry Mayo Drive in Castaic, California. In connection with the Landfill, Chiquita operates a landfill gas collection and control system. SCS prepared and submitted the Carbon Monoxide and Hydrogen Reading Summary Report (Summary Report) to the LEA on June 6, 2024, on behalf of Chiquita, in response to the directives in the LEA letters dated April 5, 2024 and May 28, 2024 regarding collection of landfill gas data and in accordance with Milestone 1A-2 of the Compliance Order. The LEA, in collaboration with the California Department of Resources, Recycling, and Recovery (CalRecycle), reviewed the Summary Report and determined that it complied with Milestone 1A-2. The LEA set forth several new requirements for Chiquita to comply with Milestone 1A-3 in follow-up correspondence dated July 30, 2024.

This report was prepared in accordance with Milestones 1A-3 and 5 of the Compliance Order, the LEA's follow-up correspondence dated July 30, 2024, Chiquita's letter dated September 3, 2024, the September 12, 2024, meeting with the LEA, and follow-up correspondence from the LEA dated November 19 and 27 and December 3, 2024.

Milestone 1A-3 Compliance Items

1. Submit the laboratory test results for monthly sampling of carbon monoxide (CO) and hydrogen (H2) from a set of landfill gas (LFG) wells selected by the LEA. Please see Table 1, columns labeled "CO" and "H2."

Results for wells monitored are shown in **Attachment A**.[1] The data is being submitted to the LEA in a standalone report signed by a licensed engineer, in accordance with Milestone 1A-3 of the Compliance Order. As noted in Chiquita's prior correspondence and monthly reports, this report does not include data from wells CV-100, CV-103, CV-1420, CV-1423, CV-1532, CV-2202, H-1403W, H-1560S, H-1774S, SC-2001W, TC-2383S, TC-2385A, and TC-2385S, as those wells have been abandoned, or from well CV-2332, as that well was never installed. All remaining wells were tested during the month of December 2025.

As discussed during the September 12, 2024 meeting, and as previously reported, graphics showing CO and H2 trends are provided in **Attachment D** and are discussed further below.

2. Provide data from readings for fixed gases (CH4, O2, and CO2) from a set of LFG wells selected by the LEA. See Table 1, column labeled "Fixed Gas CH4, O2, CO2."

The results for wells monitored are provided in **Attachment A**.

3. Collect down well temperatures at 34 wells to confirm the gas wellhead temperature readings per the requirement of the New Source Performance Standards (NSPS). See Table 1, column labeled "Down Well Temp Monitoring."

It is Chiquita's understanding from the LEA's November 27, 2024 correspondence, and as noted in prior monthly reports, that, at this time, Chiquita is only required to sample the wells at the annual frequency provided in the NSPS protocols, but that the LEA may require more frequent monitoring for up to ten (10) wells selected by the LEA. Chiquita is awaiting the LEA's selection of those wells.

Chiquita nevertheless provides in **Attachment B** the down-hole temperature graphs[2] concerning the following wells from fixed locations which contain the Lorentz Pumping System with integral temperature sensors: CV-2303, CV-2350 and CV-24095.

Please note that the Lorentz pump and/or temperature monitoring system for the pumps in CV-2301, CV-2302, CV-2315, CV-2351, CV-2352, CV-24017 and CV-24065 were offline during this reporting period due to either the deployment of the approved EVOH 60-mil

[1] The lab(s) reported data from additional LFG wells outside of those selected for sampling by the LEA; the additional data is related to separate South Coast Air Quality Management District (South Coast AQMD) reporting requirements and therefore can be disregarded for purposes of this report.
[2] Each graph notes a single temperature data point due to changes in the software.

geomembrane or the interim relocation of the tank farm, or were in the process of being repaired. (See **Attachment B** Monitoring List).

As previously noted, SCS will continue to collect down-hole temperatures for wells on an annual basis and will report the results as the data is obtained at each location. (See **Attachment B**). SCS has completed annual 2025 downhole temperature monitoring at all locations requested as of June 2025. However, in order to provide additional information to the LEA regarding the new Soil Vapor Extraction Wells, downhole temperature monitoring was performed for the second time this year at well CV-24139 on August 18, 2025 (initial annual monitoring occurred on 3/10/2025) and this data was submitted in the August 2025 report.

4. Sample the selected 40 wells for VOCs by method TO-15. See Table 1, column labeled "VOC (TO-15)."

The results for wells monitored are provided in **Attachment A**.[3] Please note that 31 locations for VOC sampling were tested during December 2025. Nine locations (CV-100, CV-103, CV-1532, CV-2202, H-1403W, H-1560S, H-1758N, H-1774S, and TC-2385A) were not sampled as they have been abandoned.

5. Continue to sample and monitor 6 horizontal wells as indicated in Attachment 1, well numbers highlighted in yellow. At this time, 42 horizontal wells may be released from continued sampling, however, wells may be included later depending on future data submissions. See Table 1, well numbers highlighted in blue.

As noted in the September 3, 2024 letter and reported in prior monthly reports, two (2) of the six (6) horizontal wells (H-1774S and H-1560S) were abandoned when the new vertical extraction wells were installed. Additionally, H-1403W has since been abandoned. Thus, data from those wells are not included. Data from the three (3) other horizontal wells are in **Attachment A**.

6. Add 20 vertical wells to the monthly wellhead temperature and LFG sampling protocols. See Table 1.

As conveyed by the LEA during our September 12, 2024 meeting, and restated in our prior monthly reports, we understand the LEA is requiring laboratory analytical data for fixed gases, CO, and H2, as well as field data. Laboratory results are in **Attachment A**. Field data with wellhead gas temperatures are shown on Table 2 in **Attachment A**.

We understand from the LEA's November 27, 2024 correspondence that laboratory analytical data will be required for the specified fixed gases.

[3] Well CV-24142 is listed twice in Table 1 of the LEA's July 30, 2024 letter – one requires VOC sampling, and the other does not. Chiquita sampled this well for VOCs.

Note that following wells were again not sampled in December 2025, for the following reasons noted in prior monthly reports:

CV-1420 – Abandoned during 2024 GCCS Expansion due to declining gas flows.
CV-2202 – Abandoned during 2024 GCCS Expansion due to declining gas flows.
CV-2332 – This well does not exist. This well was proposed for installation in Fall 2023, but other wells were installed in the area in lieu of CV-2332 when the number of wells increased pursuant to the Stipulated Order for Abatement (Stipulated Order) with the South Coast Air Quality Management District (South Coast AQMD).

7. Plot to show the locations of the following 19 wells on the site map titled "Existing GCCS Map – LFG Vertical Extraction Wells" dated 06/06/2024: CV-24002, CV-24003, CV-24007, CV-24017, CV-24053, CV-24055, CV-24065, CV-24071, CV-24075, CV-24077, CV-24079, CV-24082, CV-24083, CV-24088, CV-24095, CV-24096, CV-24097, CV-24098 and H-1403W. For well H-1403W, provide the horizontal location of piping and an estimate where the high temperature (195°F) is most likely occurring. See Table 1, well numbers highlighted in red and H-1403W (highlighted in yellow).

The locations of the above-identified wells are shown on the Map in **Attachment C.**[4]

8. Include in the monthly report, a settlement/heat map as shown below, beginning with the earliest heat map data available for each month to present. The topographic maps should show 2-foot contour intervals if possible.

The LEA directed Chiquita on June 2, 2025 to submit isopach maps on a monthly basis to comply with this request. For ease of reference, we are submitting as **Attachment F** a copy of the December 2025 isopach map, which was initially submitted to the LEA with the weekly cover logs on January 13, 2026.

9. Provide the sampling results in a standalone report with the appropriate discussion, tables, QA/QC, methods and signed by a registered professional, etc., as described in the Compliance Order Milestone 1A-2 and 1A-3.

CCL has provided the above-requested information and the raw data in **Attachment A**, as well as a figure with the data-driven reaction area which incorporates settlement data (see **Attachment F**). Temperature graphs are provided for wells with Lorentz pumps (3 locations).

Please note that in addition to the wells listed in response to the request dated July 30, 2024 (in Table 1) that could not be tested, the following wells that only required analytical data could also not be tested, as previously reported, because they were abandoned during the 2024 and 2025 GCCS expansion due to declining gas flows in accordance with the

[4] The LEA acknowledged in its November 20, 2024 correspondence that a high temperature is not occurring in well H-1403W. We therefore did not map the maximum temperature at well H-1403W.

requirements of the NSPS: CV-100, CV-103, CV-1420, CV-1423, CV-1532, CV-2202, H-1403W, H-1560S, H-1774S, SC-2001W, TC-2383S, TC-2385A, and TC-2385S. Finally, as also previously reported, CV-2332 was never installed.

Sampling Procedures

Gas samples were collected using Tedlar or Mylar bags, as described in Chiquita's September 3, 2024 letter and the prior monthly reports, and then delivered to certified laboratories for testing. All permanent gas (CH4, CO2, O2, N2, CO, and H2) data were analyzed within the requested 24 hours of sampling. SCS continues to believe that use of the EPA-approved 72-hour holding time for these samples would be appropriate and accurate. Nevertheless, in response to the LEA's March 17, 2025 correspondence, SCS will continue to request 24-hour holding times for all fixed gases, including CO, H2, and VOCs, collected using Mylar or Tedlar bags. However, if additional sampling is required or if the laboratories have a change in workload, this holding time may change, in which case the LEA will be notified accordingly. During December 2025, all wells were tested for VOCs (EPA method TO-15) and permanent gases (EPA methods 1946 and Alt-144) within 24 hours by providing the laboratory with duplicate bag samples as needed for VOC testing.

Additional gas and pressure data were collected using either an Envision Irwin Gas Meter or Landtec GEM 5000 Gas monitoring device. These instruments measure combustible gas concentrations in air directly on either of two scales, the first as a percent by volume of the lower explosive limit (LEL) of methane gas in air (0 to 5 percent) and the other as a percent by volume (0 to 100 percent) in the gas sampled. The detection limit for these instruments is approximately 0.10 percent by volume.

Gas monitoring testing procedures were as follows:

- Connect sample tubing, open test valve, observe pressure, and record data.
- Turn on sample pump, purge a minimum of one probe volume, and observe and record methane, oxygen, and carbon dioxide gas concentrations when readings have stabilized.
- Close test valve, disconnect sample instruments, and secure sample location.

Milestone 1A-3 Conclusions

December 2025 was the seventeenth monitoring performed pursuant to Milestone 1A-3 of the Compliance Order. The data collected in December 2025 and evaluated for this report are consistent with the data collected in the previous months of August 2024 through November 2025 as well as the data collected and evaluated by the Reaction Committee established under the supervision of South Coast AQMD and in accordance with the Stipulated Order to assess the reaction area, including the December 2025 data most recently evaluated by the Reaction Committee on January 9, 2026, as required by Condition 9(b) of the Stipulated Order for Abatement. (See **Attachment E**.)

For the reasons described in the attached January 9, 2026 Reaction Committee report, the alignment of the estimated extent of the elevated temperature landfill (ETLF) conditions exhibited at the Landfill (referred to as the "Reaction Area" limits) and identified in that report remains the same as that identified in the Reaction Committee's December 2025 report. The Reaction Committee determined that no adjustments were warranted and that the ETLF conditions were fully contained within the Reaction Area boundary and had not expanded into a new cell.

As liquid levels continue to change due to the installation of additional Lorentz Electric and Pneumatic Pumps, we continue to see the anticipated changes in percentages of Permanent Gases, Carbon Monoxide, and Hydrogen and changes to temperatures as more gas is able to move towards and to be removed by the extraction wells as the levels of liquid decline. This continues to be demonstrated by the multiscale well graphics included in **Attachment D**, which includes graphics on permanent gases, temperature, and other trends over a twelve (12)-month period. Note that these graphs were created using standard landfill gas monitoring equipment and the results do not contain laboratory data. SCS has also included separate Hydrogen and Carbon Monoxide graphs using laboratory results for your use and review for each well.

Additionally, the installation of larger diameter piping has improved the collection of additional gases throughout the Landfill. Since March 2025, the flow rates of landfill gas being combusted by the abatement devices have ranged from 13,500 cfm to 16,700 cfm. During December 2025, the overall gas extraction from the Landfill was approximately 701,249,760 cubic feet. This landfill gas extraction rate, which was the highest removal rate observed to date, and anticipated future increases of this extraction rate as the collection systems continue to expand, is expected to improve the gas composition of the wells in the reaction area as more vacuum and resulting movement of gas allows more reaction and normal landfill gas to be extracted.

Chiquita will continue to evaluate the data in future monthly reports as additional data is collected.

<u>Milestone 5 Compliance Items</u>

This report includes in **Attachment D** individual maps overlayed with the following data for December 2025 in an easily understood format, in accordance with Milestone 5 of the Compliance Order:

- Defined reaction area;
- Expansion of reaction area, if any;
- Weekly TMP data; and
- LFG data including, but not limited to, CH4, CO2, O2, Temperature, CO, and H2 data.

Milestone 5 also requires "settlement with heat maps," but as discussed earlier in this report and in accordance with LEA correspondence dated November 27 and December 3, 2024, this requirement is satisfied by Chiquita's submittal of its monthly isopach maps to the LEA, which was done on January 13, 2026. For the LEA's convenience, the December 2025 isopach map is included herein as **Attachment F**.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S120101-01/10

Enclosed are the results for sample(s) received 12/1/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. t-1,3-dichloropropene required quadratic regression calibration.
- Benzyl chloride did not meet initial calibration criteria. Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results for benzyl chloride and ethyl acetate are flagged with the Q qualifier.
- Performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/12/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Annika Sotelo Sanchez for

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S120201-01/10

Enclosed are the results for sample(s) received 12/2/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. t-1,3-dichloropropene required quadratic regression calibration.
- Benzyl chloride did not meet initial calibration criteria. Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results for benzyl chloride and ethyl acetate are flagged with the Q qualifier.
- Performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/16/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Annika Schlesinger Jr.

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S120303-01/09

Enclosed are the results for sample(s) received 12/3/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. t-1,3-dichloropropene required quadratic regression calibration.
- Benzyl chloride did not meet initial calibration criteria. Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results for benzyl chloride and ethyl acetate are flagged with the Q qualifier.
- Performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/18/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Annika Sotolongo-Sanchez for

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S120401-01/10

Enclosed are the results for sample(s) received 12/4/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. t-1,3-dichloropropene required quadratic regression calibration.
- Benzyl chloride did not meet initial calibration criteria. Ethyl acetate exhibited high recovery in the initial calibration verification indicating a possible high bias. Results for benzyl chloride and ethyl acetate are flagged with the Q qualifier.
- Performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/18/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Annika Sotelo-Sanchez for

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S120803-01/10

Enclosed are the results for sample(s) received 12/8/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Due to instrument performance issues the EPA TO-15 analyses could not be performed. The client was informed on 12/8/25.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S120903-01/09

Enclosed are the results for sample(s) received 12/9/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S121705-01/07

Enclosed are the results for sample(s) received 12/17/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. Ethyl acetate required quadratic regression calibration.
- Acetone and isopropanol exhibited high recovery in the initial calibration verification indicating a possible high bias. Vinyl acetate and benzyl chloride exhibited low recovery in the initial calibration verification indicating a possible low bias. Results for the above targets are flagged with the Q qualifier.
- 4-ethyl toluene exhibited high recovery in the continuing calibration verification indicating a possible high bias. Detected results are flagged with the Q qualifier.
- Performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson

LABORATORY TEST RESULTS

Project Reference: Chiquita Canyon Landfill
Project Number: 07224200.24 Task 1
Lab Number: S121808-01/09

Enclosed are the results for sample(s) received 12/18/25 by Air Technology. Samples were received intact. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

- Modifications to EPA TO-15 – samples were collected in Mylar bags. Ethyl acetate required quadratic regression calibration. Acetone and isopropanol exhibited high recoveries in the initial calibration verification (ICV) indicating possible high bias. Results were flagged with the Q qualifier. Vinyl acetate and benzyl chloride exhibited low recoveries in the ICV indicating possible low bias. Results were flagged with the Q qualifier. Ethyl toluene, 1,3,5-trimethylbezene, and 1,2,4-trimethylbenzene exhibited high recoveries in the continuing calibration verification indicating high bias. Results above the RL were flagged with the Q qualifier.
- Unless otherwise noted in the report, sample analyses were performed within method performance criteria and meet all requirements of the TNI Standards.
- The enclosed results relate only to the sample(s).

Preliminary results were e-mailed to Cornelius Fong, Jenny Kim, Art Jones and Ali Ferrara on 12/23/25.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson
Operations Manager

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 10/23/2025 to 12/3/2025

SCS ENGINEERS

07224053.00 | December 4, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

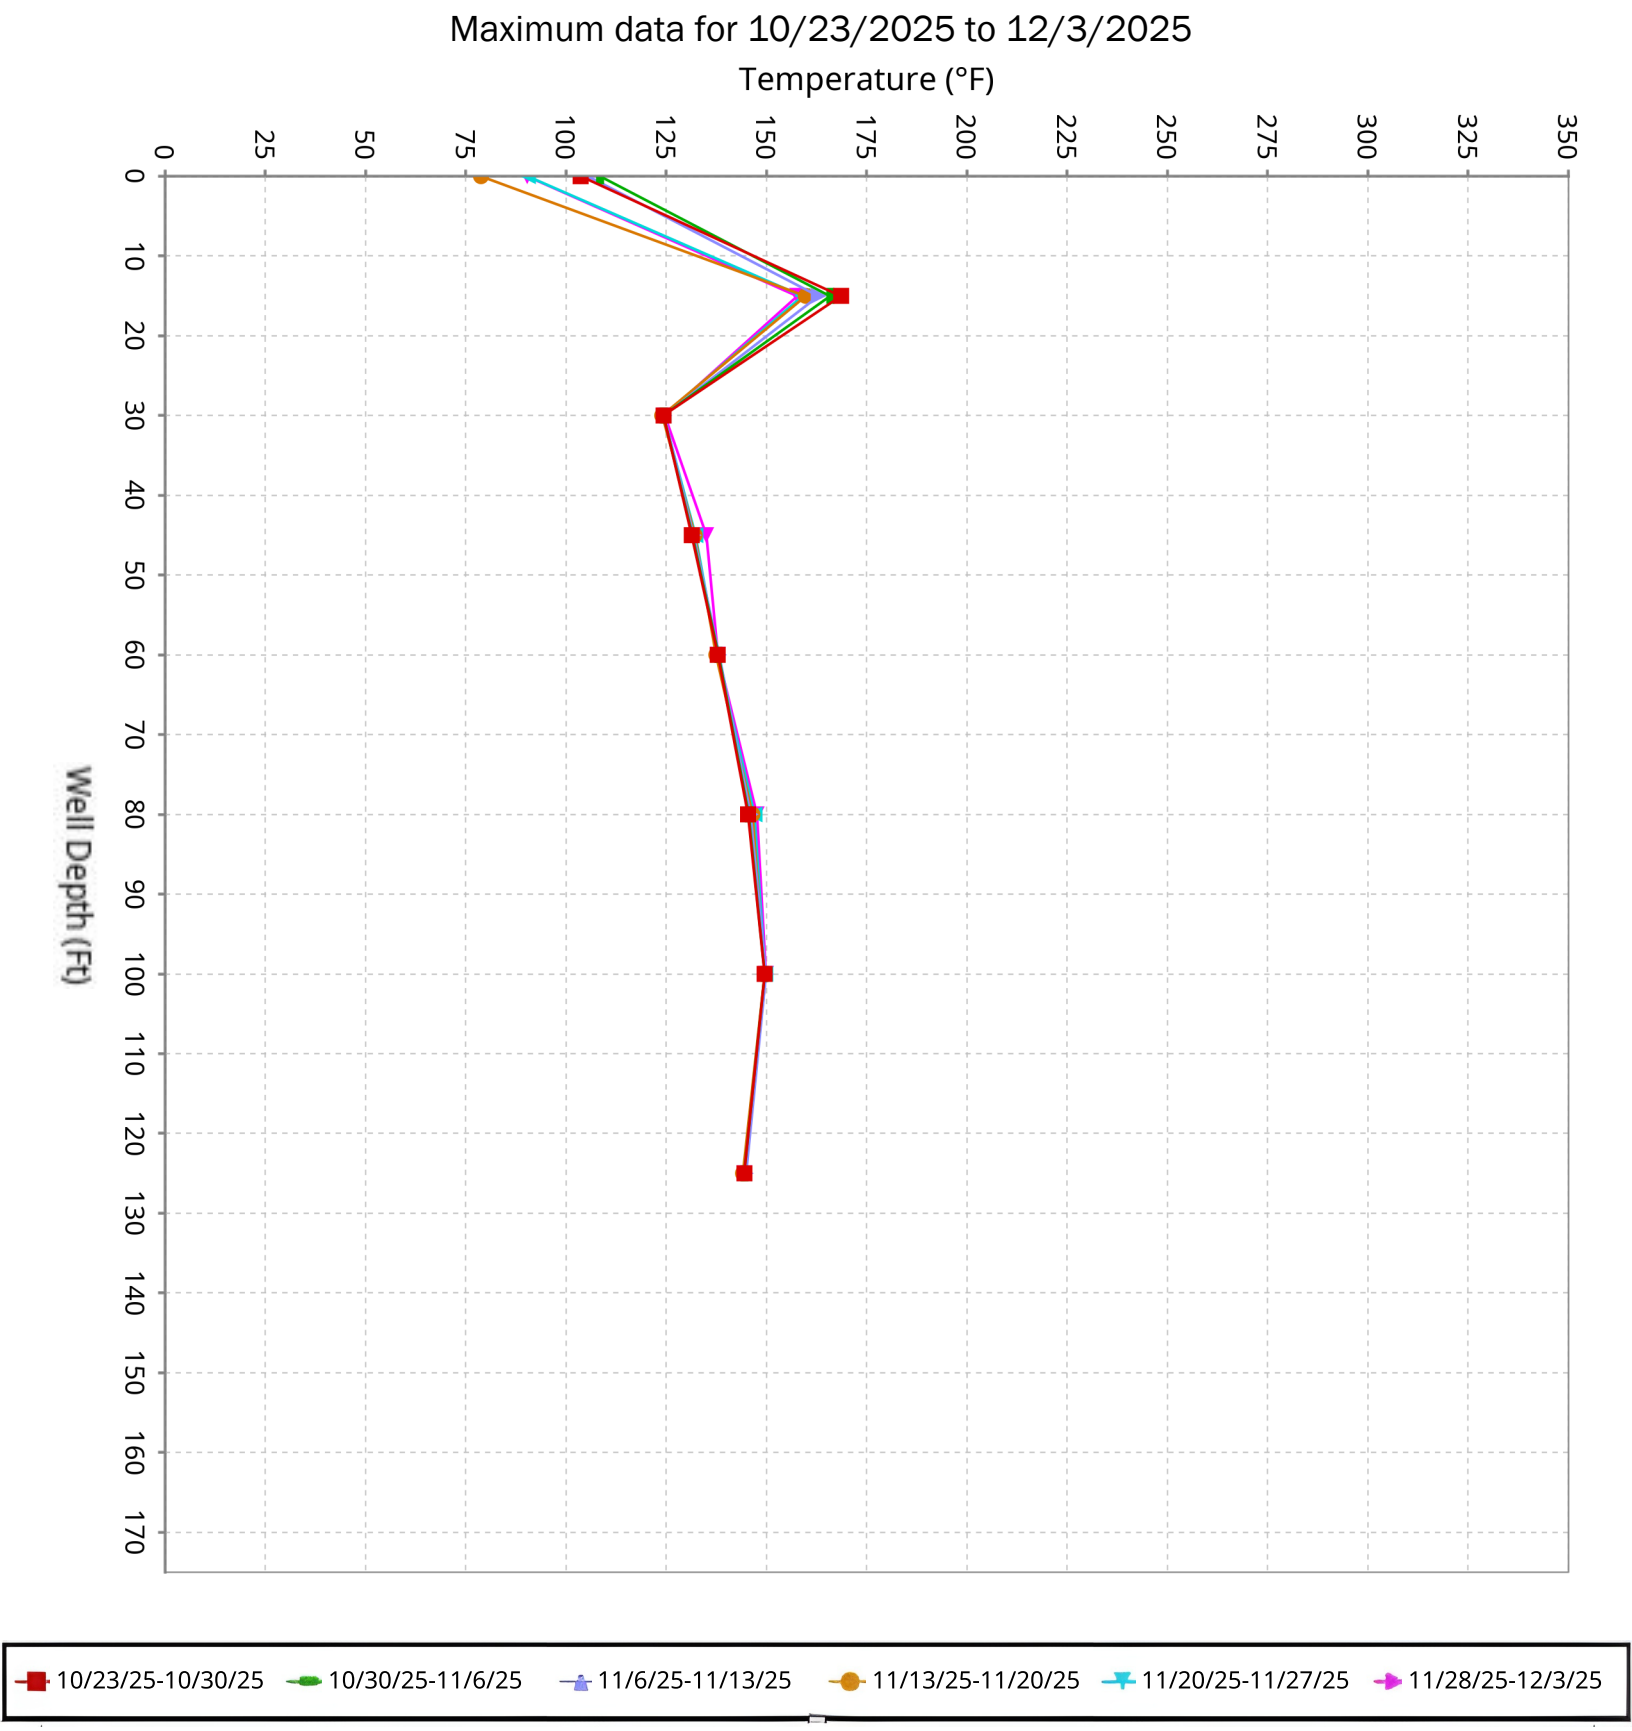

From November 26, 2025, through December 3, 2025, there were two recorded temperature decreases and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of April 4, 2025, twelve new TMPs (TMP-21, TMP-24, TMP-25, TMP-26, TMP-27, TMP-28, TMP-29, TMP-30, TMP-31, TMP-32, TMP-34, and TMP-35) have been installed and are online. None of these twelve new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

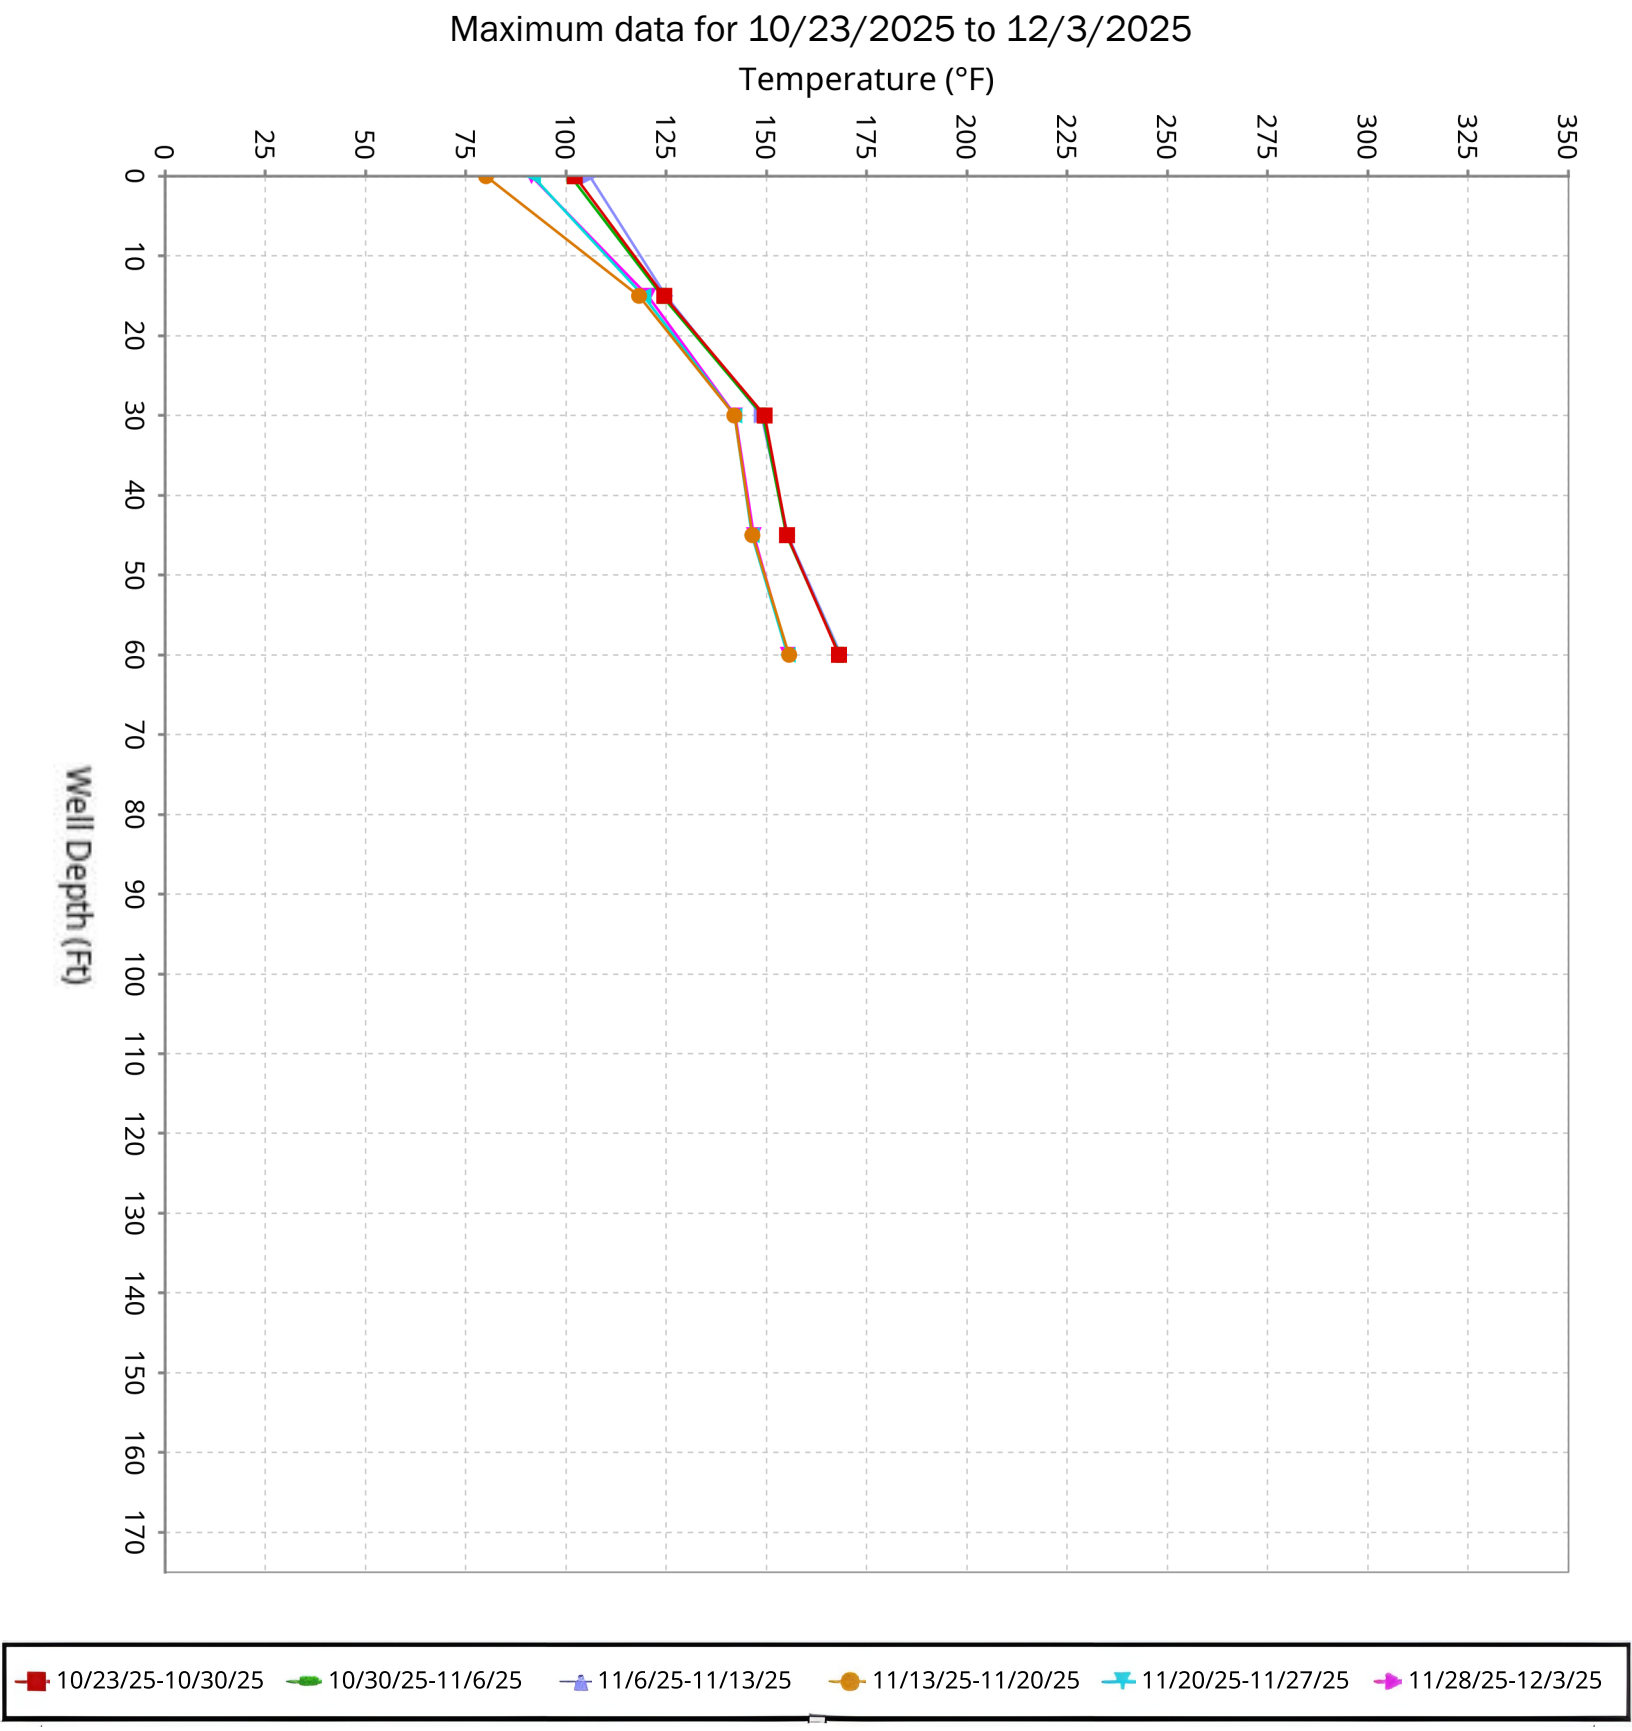

- TP-07
    - As previously reported, the 60-foot thermocouple showed anomalous readings from October 2nd to October 13th of 175°F up to 2,507°F, October 19th to October 21st, and October 30th to October 31st, indicating issues with the thermocouple and that the readings were most likely erroneous. The wiring was checked on the 60-foot thermocouple and reconnected, but erroneous readings continued. The 60-foot thermocouple was replaced and has returned to normal working order. No other thermocouples at TP-07 showed any such changes in temperatures.
- TP-08
    - The 45-foot thermocouple remained consistent with previous recorded temperatures.
    - The 125-foot thermocouple showed a decrease in maximum temperature of 10°F from 171°F to 161°F from November 24th to November 26th, an increase in maximum temperature of 16°F from 161°F to 177°F from November 26th to November 29th, and then a decrease in maximum temperature of 13°F from 177°F to 164°F from November 29th to November 30th.
    - The 150-foot thermocouple continued to show anomalous readings for a single hour readings on each day of the past week, indicating these readings were likely erroneous. The 150-foot thermocouple will be evaluated next week for issues or possible replacement.
- TP-25
    - The 110-foot thermocouple remained consistent with previous recorded temperatures.
    - The 130-foot thermocouple remained consistent with previous recorded temperatures.
- TP-28
    - As previously reported, all thermocouples were offline on November 7th for TMP raising and show a 0°F reading for November 7th, since each thermocouple was raised, the elevations of each thermocouple show changes. Changes in temperature before November 7th and after November 7th do not represent changes in temperature for the associated waste.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 10/30/2025 to 12/10/2025

SCS ENGINEERS

07224053.00 | December 11, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From December 4, 2025, through December 10, 2025, there were two recorded temperature decreases and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

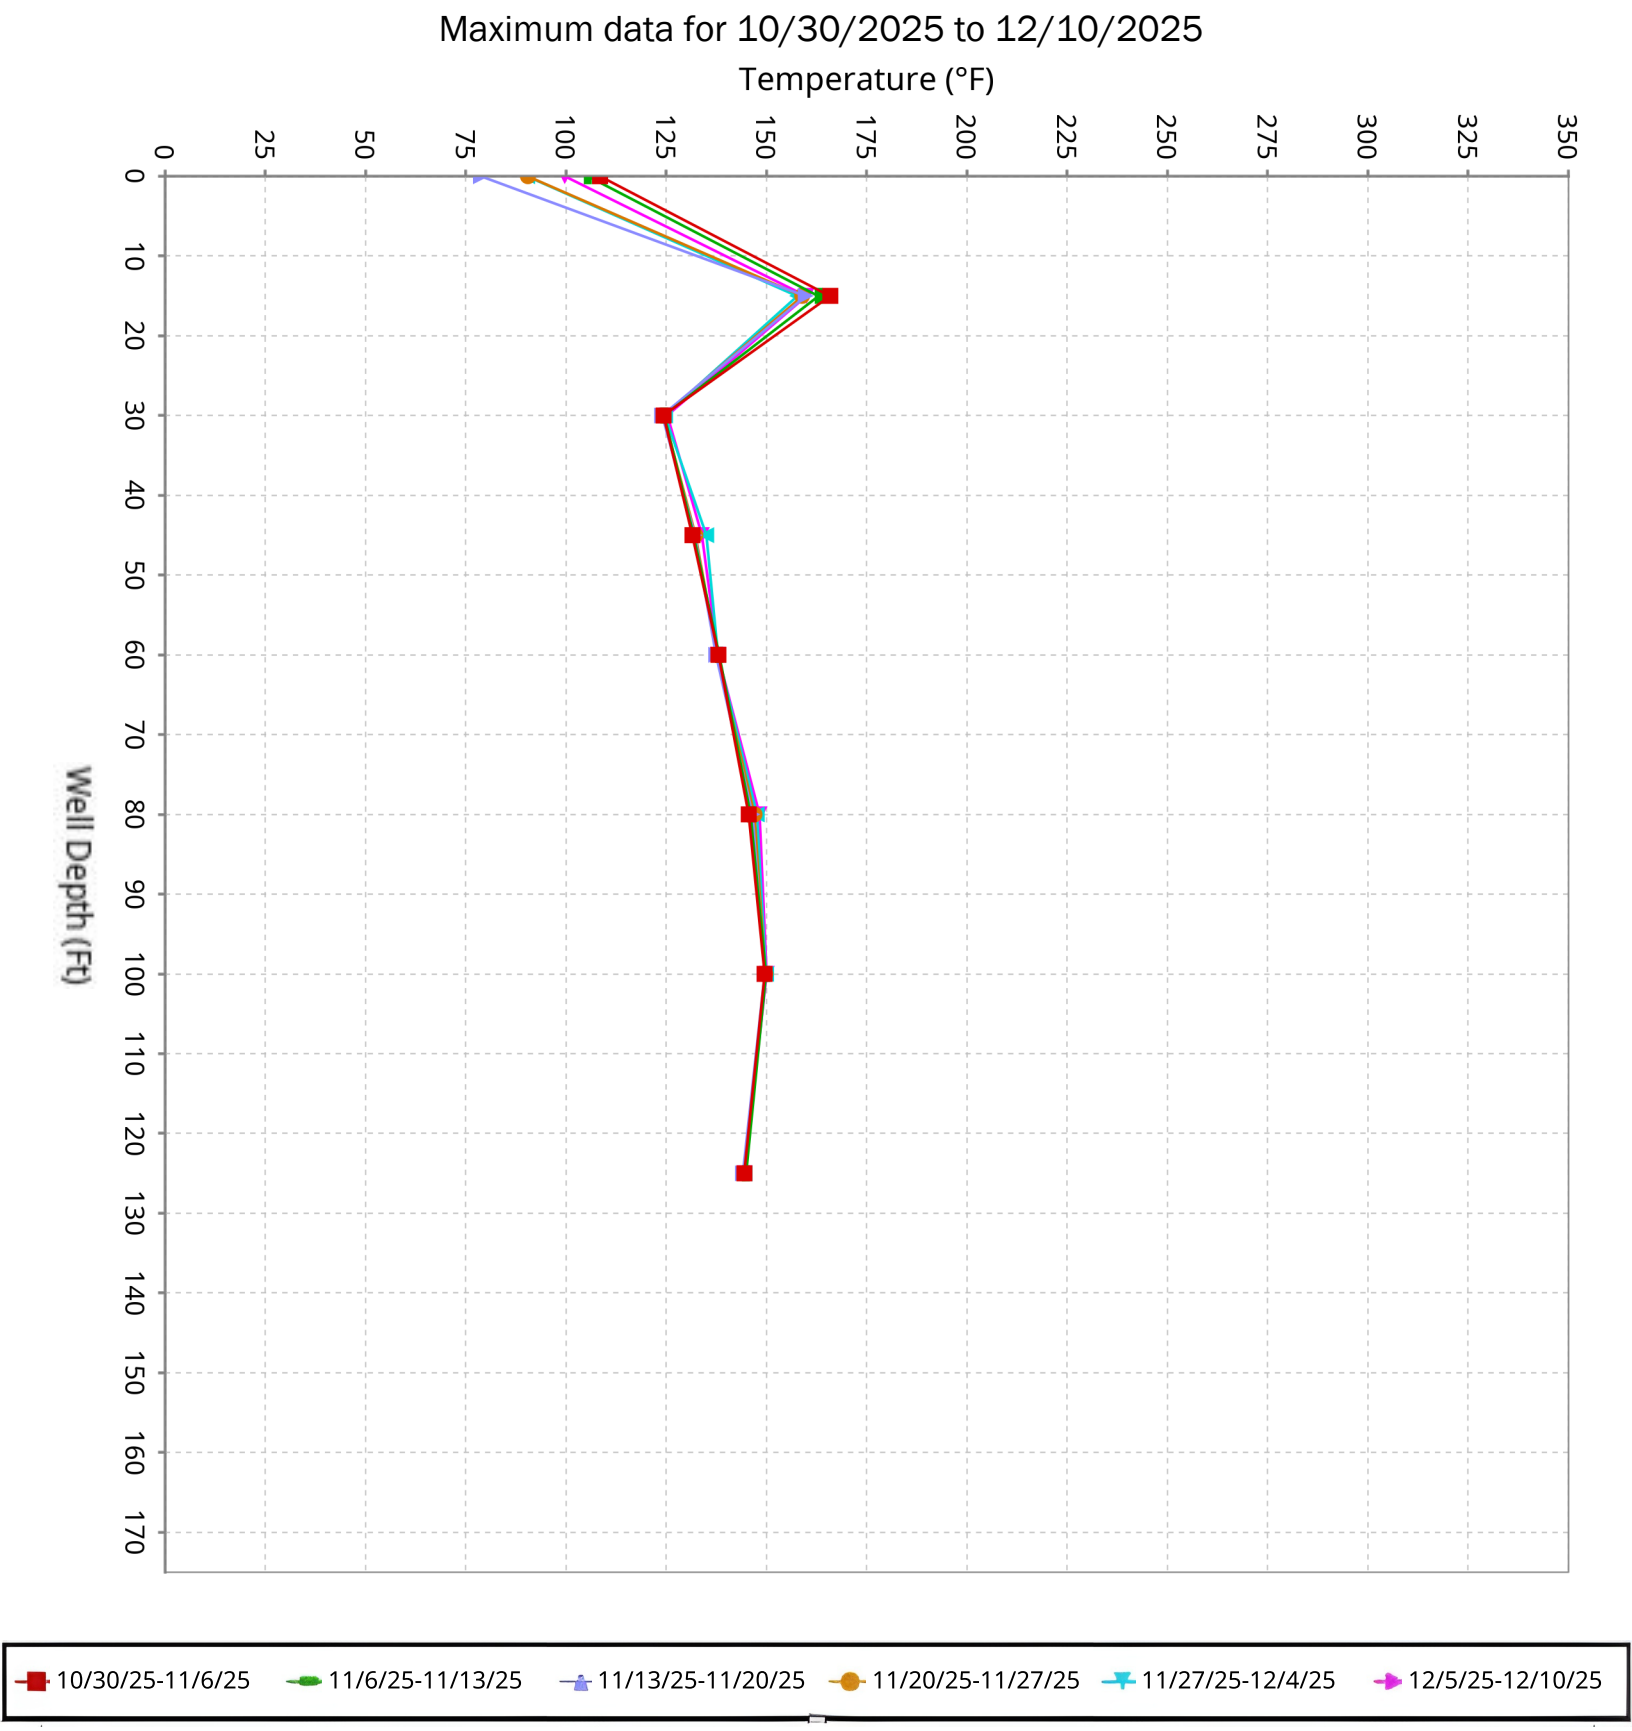

Additionally, as of December 11, 2025, five new TMPs (TMP-36, TMP-37, TMP-38, TMP-39, and TMP-40) have been installed and are online, in addition to the 12 TMPs previously installed as of April 4, 2025. None of these new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

The installation of five TMPs (TMP-36, TMP-37, TMP-38, TMP-39, and TMP-40) was completed as of December 5th. These five TMPs are shown in the map of the maximum temperatures recorded in the past week. Temperature readings and graphs for those five TMPs will be included in next week's submittal when a full week of data is available.

Chiquita provides the following updates:

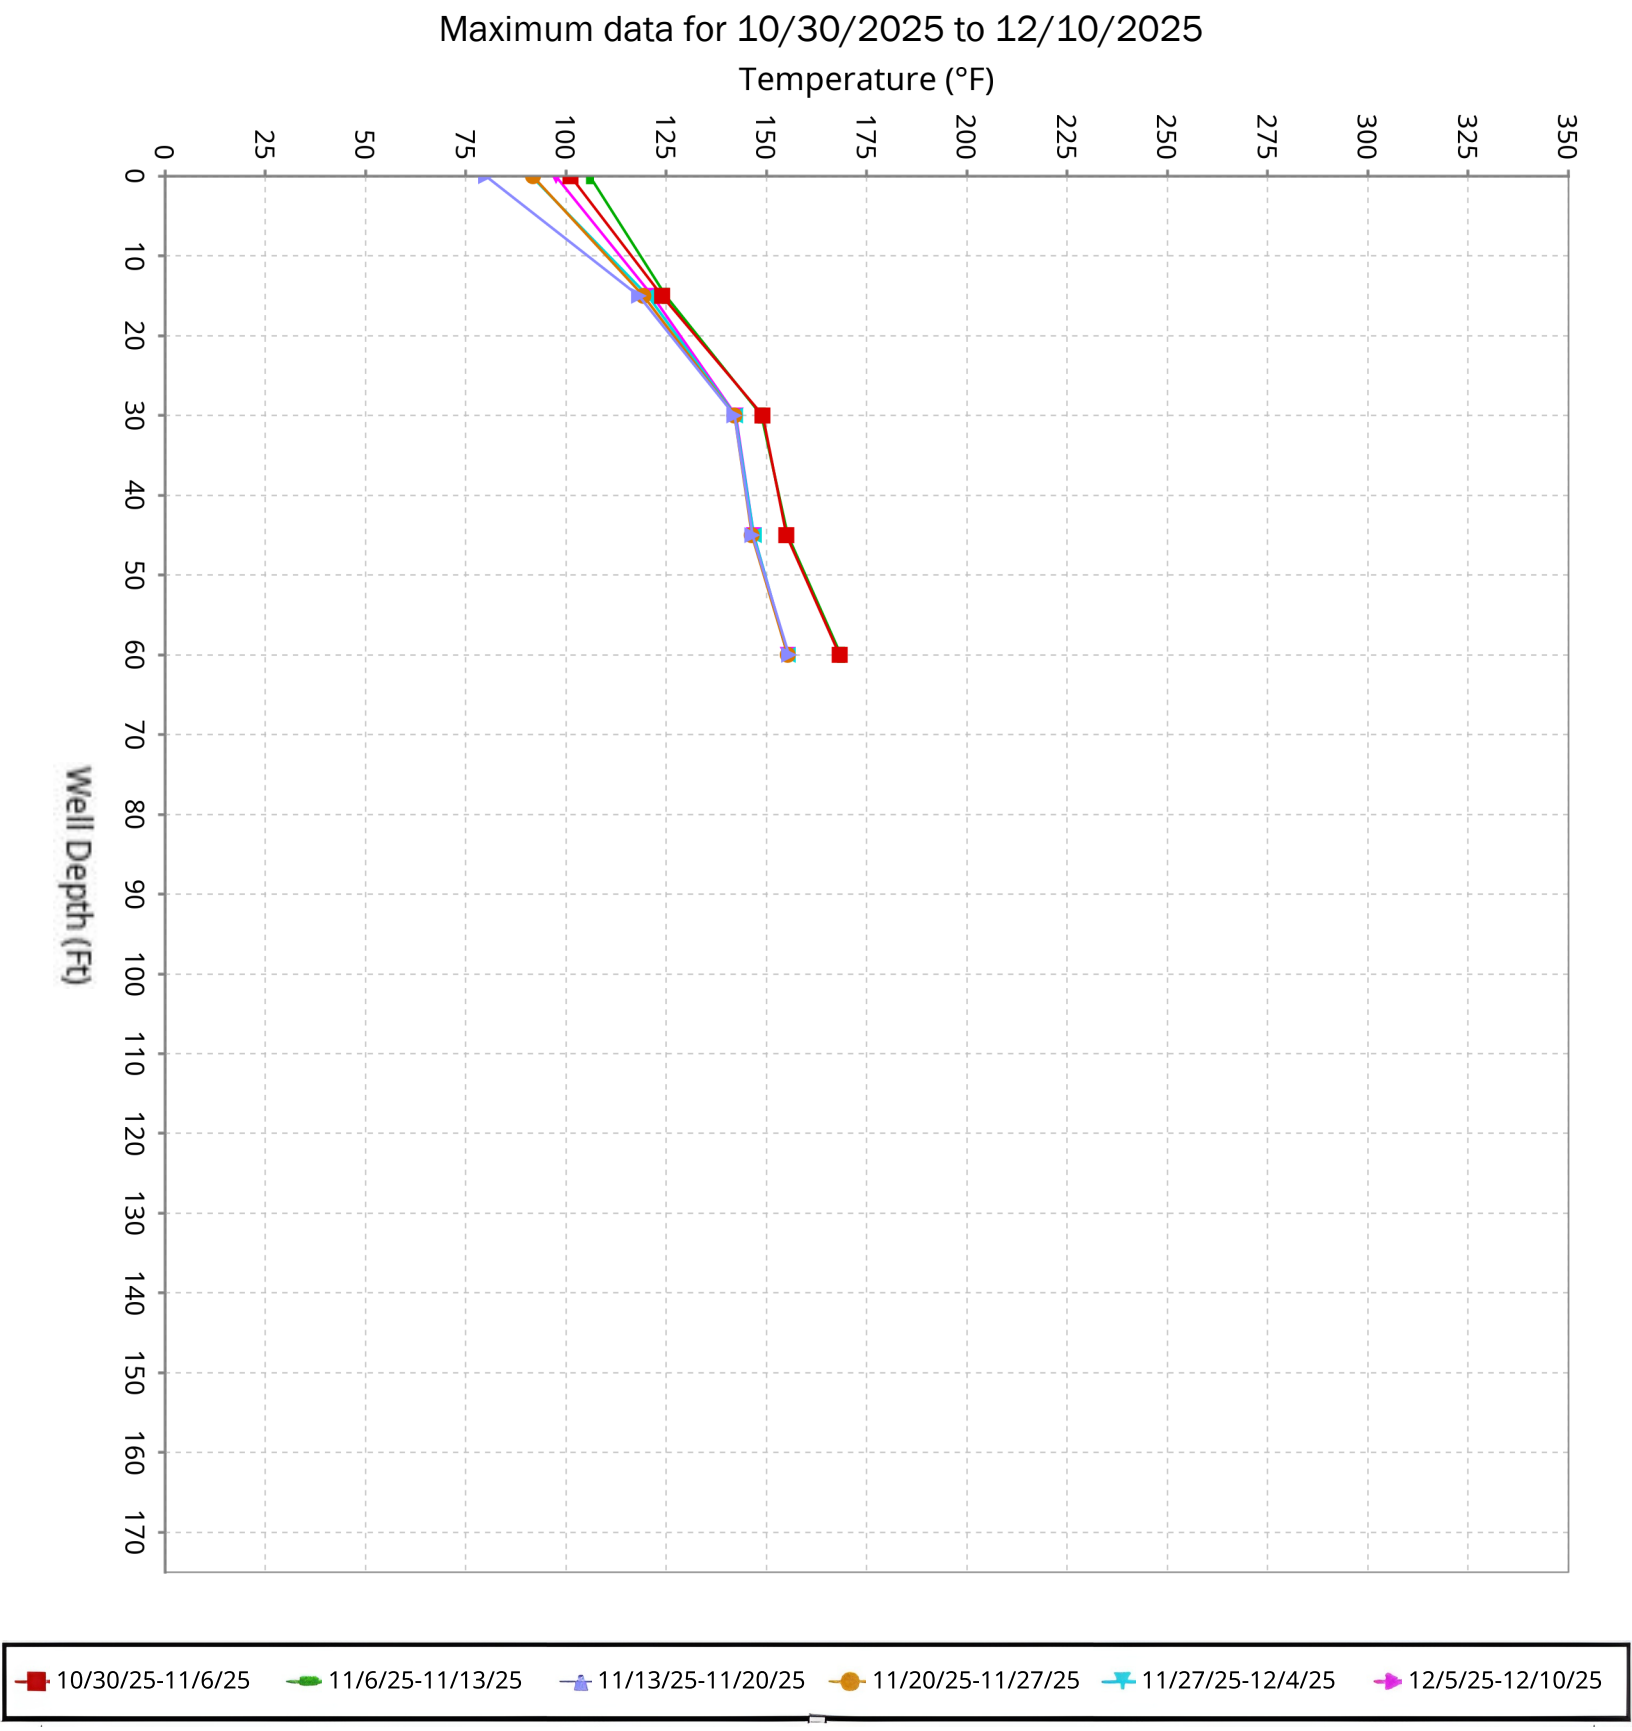

- TP-07
    - As previously reported, the 60-foot thermocouple showed anomalous readings from October 2nd to October 13th of 175°F up to 2,507°F, October 19th to October 21st, and October 30th to October 31st, indicating issues with the thermocouple and that the readings were most likely erroneous. The wiring was checked on the 60-foot thermocouple and reconnected, but erroneous readings continued. The 60-foot thermocouple was replaced and has returned to normal working order. No other thermocouples at TP-07 showed any such changes in temperatures.
- TP-08
    - The 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 151°F to 140°F from December 6th to December 10th.
    - The 45-foot thermocouple showed an increase in maximum temperature of 21°F from 138°F to 159°F from December 4th to December 5th, and then a decrease in maximum temperature of 25° F from 159°F to 134°F from December 5th to December 10th.
    - The 125-foot thermocouple remained consistent with previous recorded temperatures.
    - The 150-foot thermocouple continued to show anomalous readings for single hour readings indicating these readings were likely erroneous. The 150-foot thermocouple was evaluated and re-wired but continues to show single hour anomalous readings and is scheduled for replacement in the coming weeks.
- TP-28
    - As previously reported, all thermocouples were offline on November 7th for TMP raising and show a 0°F reading for November 7th. Since each thermocouple was raised, the elevations of each thermocouple show changes. Changes in temperature before November 7th and after November 7th do not represent changes in temperature for the associated waste.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 11/6/2025 to 12/17/2025

SCS ENGINEERS

07224053.00 | December 18, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

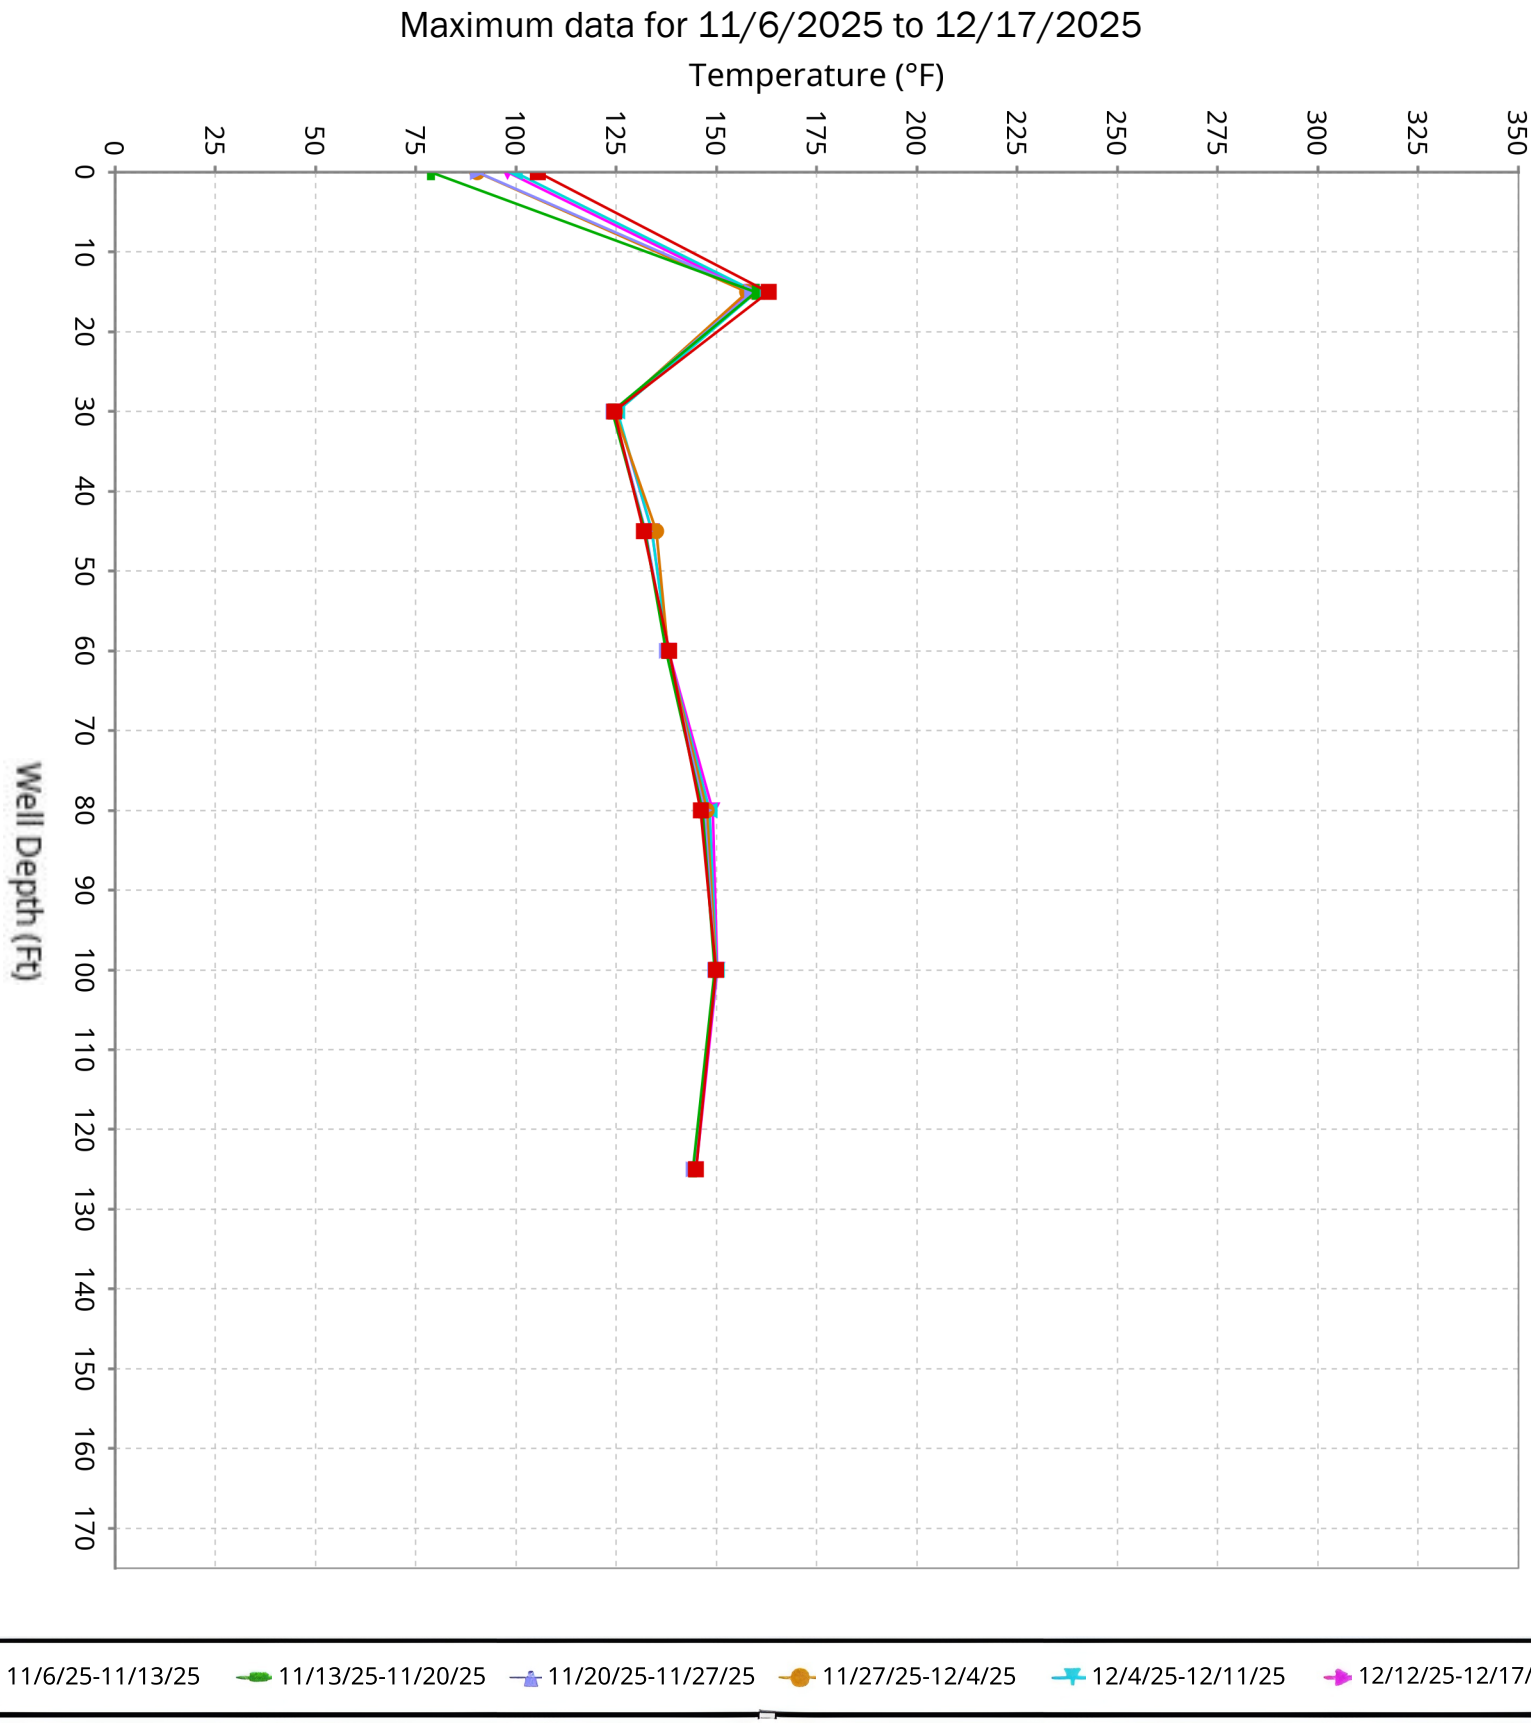

From December 11, 2025, through December 17, 2025, there were five recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Additionally, as of December 11, 2025, five new TMPs (TMP-36, TMP-37, TMP-38, TMP-39, and TMP-40) have been installed and are online, in addition to the 12 TMPs previously installed as of April 4, 2025. None of these new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

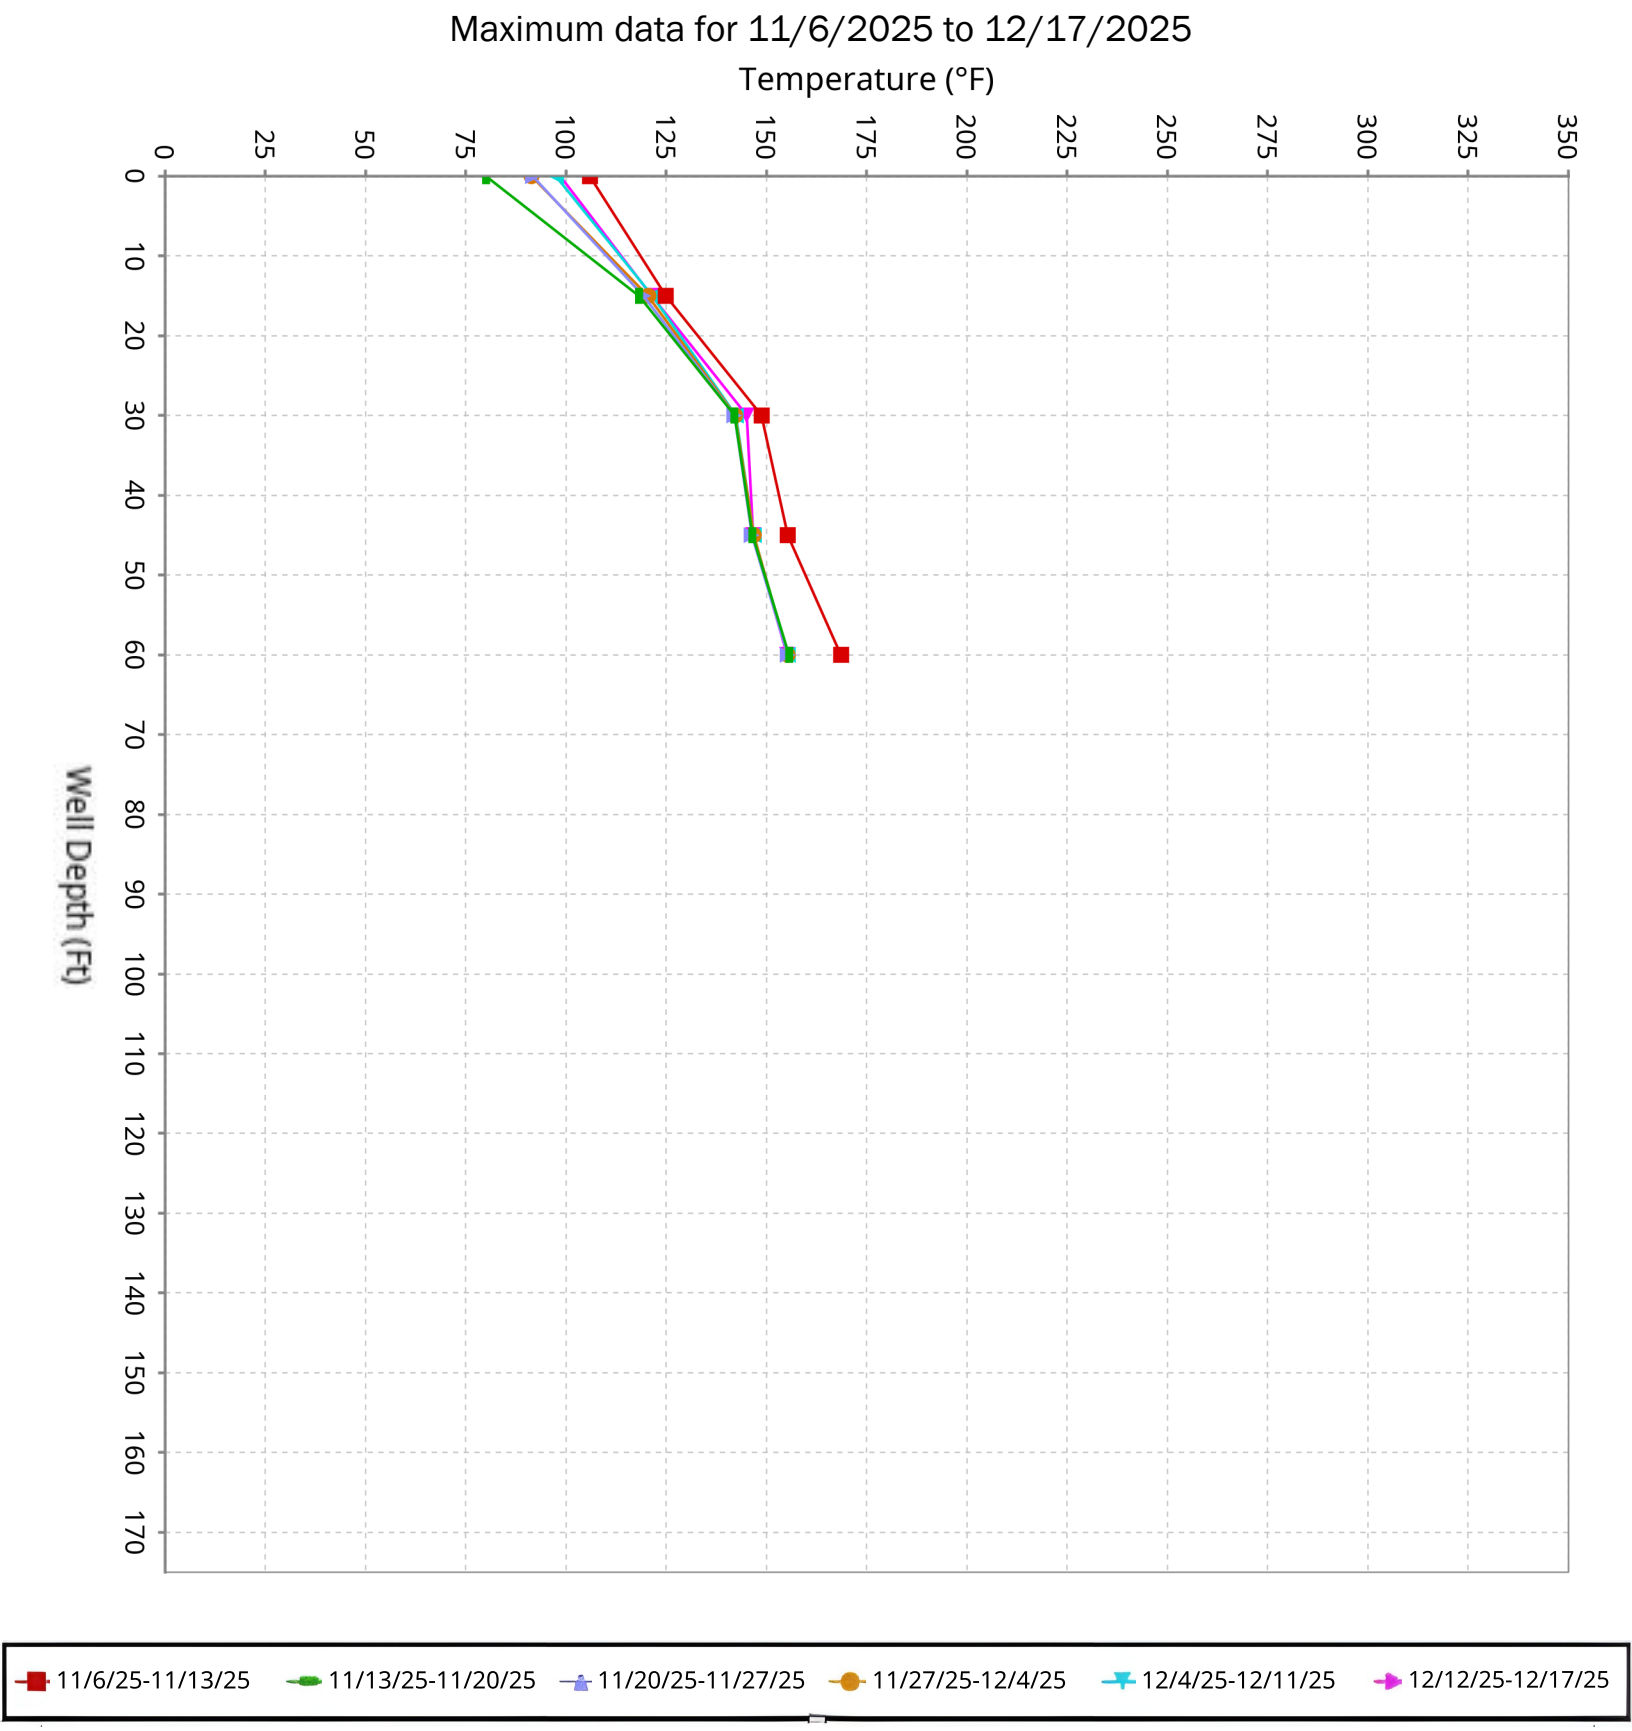

- TP-08
    - The 15-foot thermocouple showed a decrease in maximum temperature of 19°F from 140°F to 121° F from December 8th to December 15th.
    - The 30-foot thermocouple showed a decrease in maximum temperature of 13°F from 140°F to 127° F from December 10th to December 17th.
    - The 45-foot thermocouple remained consistent with previous recorded temperatures.
    - The 100-foot thermocouple showed a decrease in maximum temperature of 30°F from 152°F to 122°F from December 10th to December 15th.
    - The 125-foot thermocouple showed a decrease in maximum temperature of 34°F from 165°F to 131°F from December 8th to December 15th.
    - The 150-foot thermocouple was evaluated and replaced December 11th and has shown consistent hour after hour readings over the past week. The 150-foot thermocouple showed a decrease in maximum temperature of 36°F from 168°F to 132°F from December 10th to December 16th.
- TP-28
    - As previously reported, all thermocouples were offline on November 7th for TMP raising and show a 0°F reading for November 7th. Since each thermocouple was raised, the elevations of each thermocouple show changes. Changes in temperature before November 7th and after November 7th do not represent changes in temperature for the associated waste.

Chiquita provides the following updates:

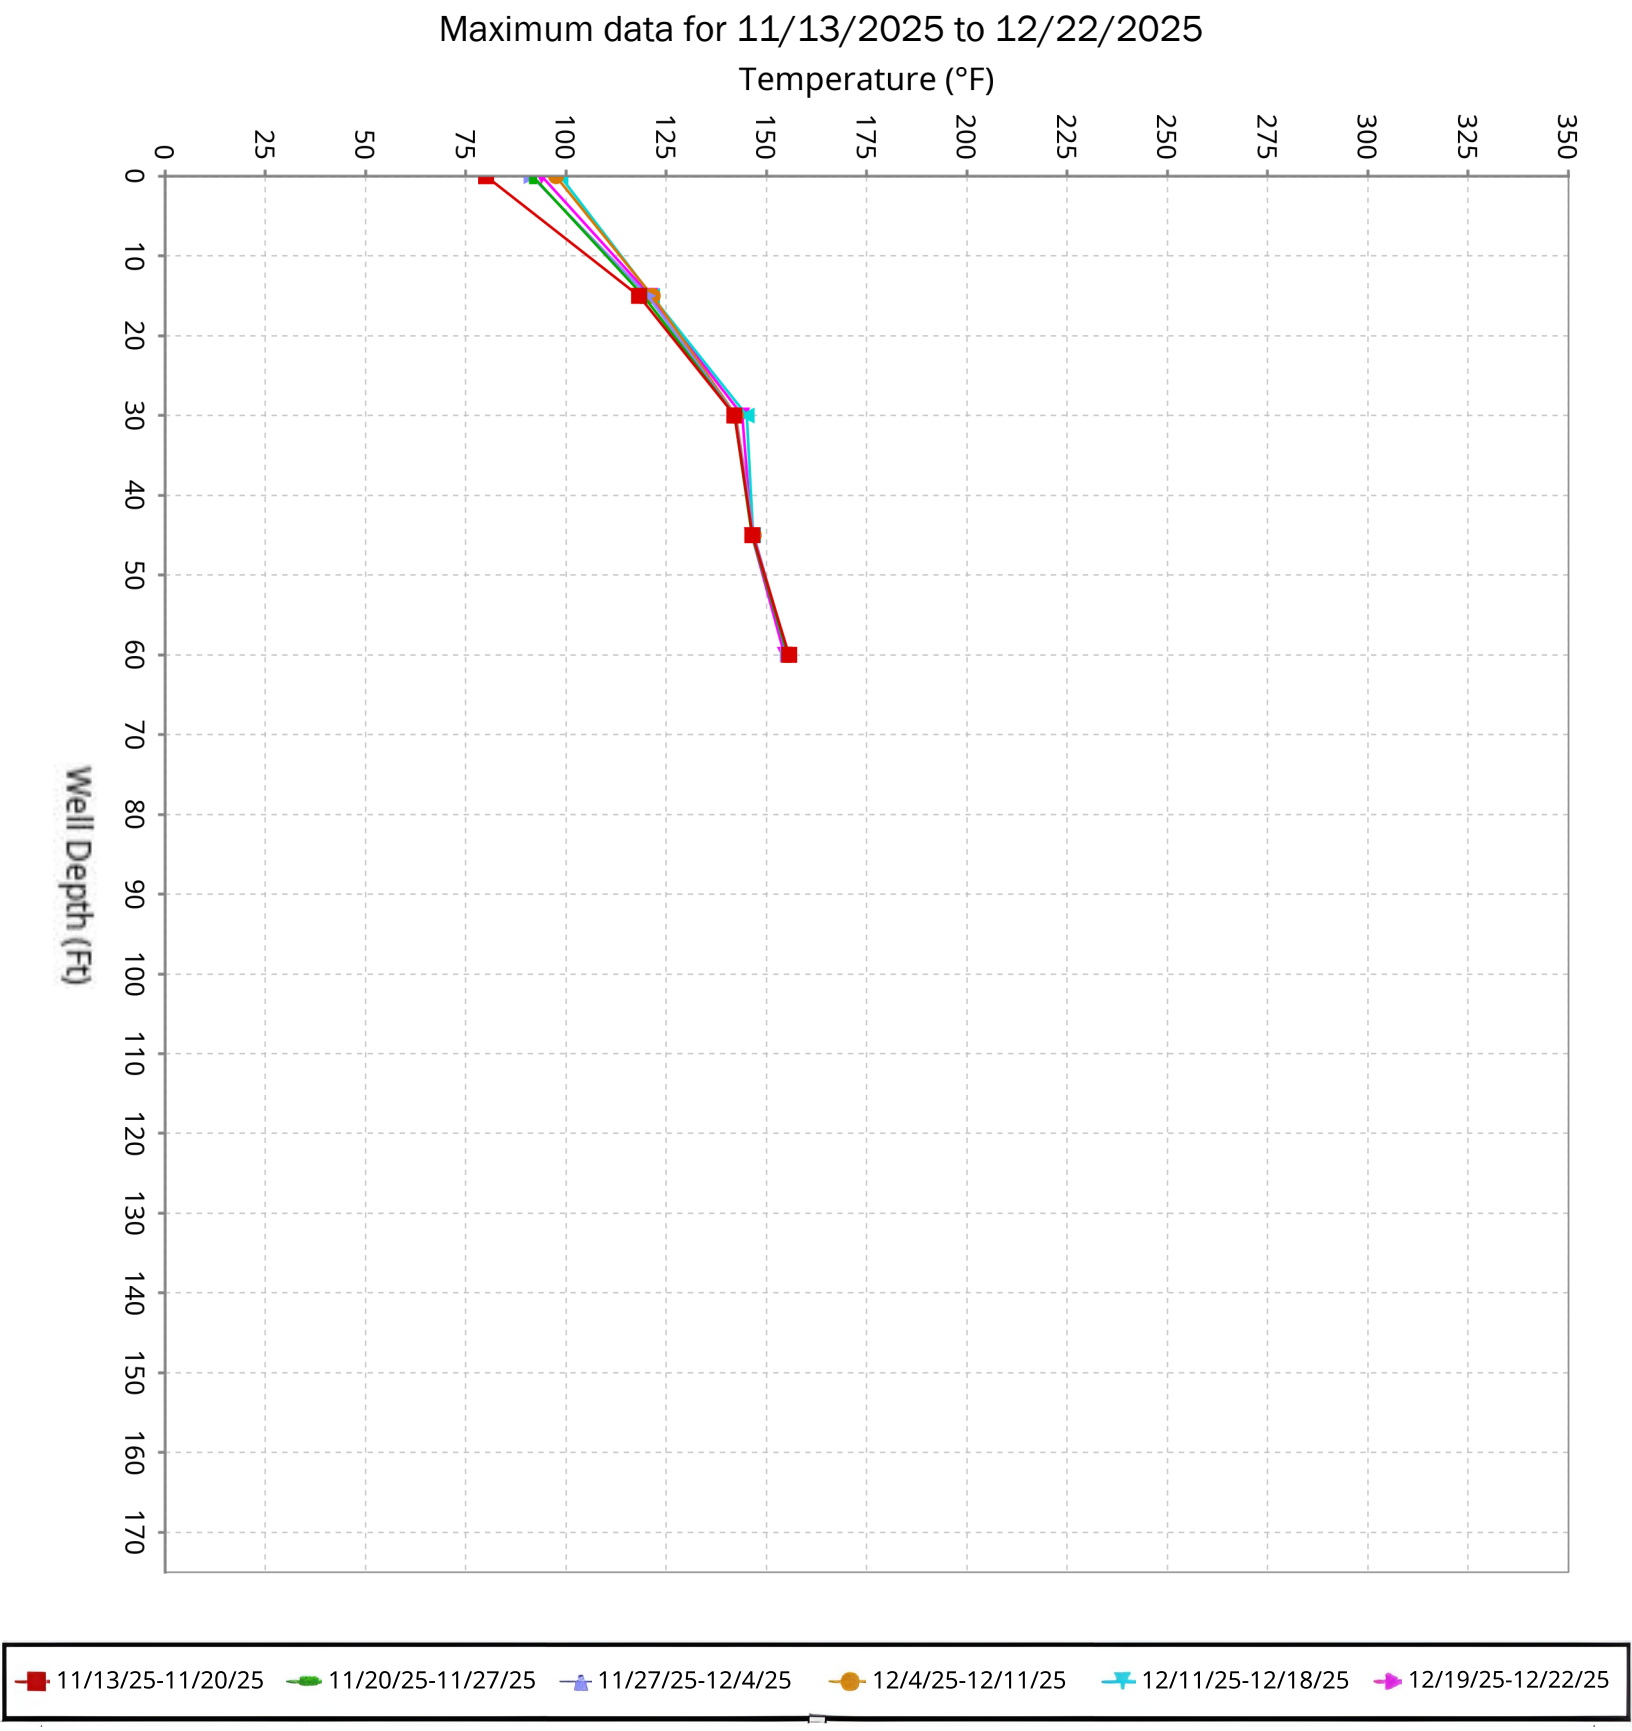

- TP-08
    - The 15-foot thermocouple remained consistent with previous recorded temperatures.
    - The 30-foot thermocouple remained consistent with previous recorded temperatures.
    - The 100-foot thermocouple remained consistent with previous recorded temperatures.
    - The 125-foot thermocouple remained consistent with previous recorded temperatures.
    - The 150-foot thermocouple remained consistent with previous recorded temperatures.
- TP-11
    - The 30-foot thermocouple showed a decrease in maximum temperature of 13°F from 174°F to 161°F from December 19th to December 22nd.
- TP-15
    - The 30-foot thermocouple showed an increase in maximum temperature of 10°F from 195°F to 205°F from December 16th to December 22nd.
    - The 45-foot thermocouple showed an increase in maximum temperature of 14°F from 197°F to 211°F from December 17th to December 22nd.
    - The 75-foot thermocouple showed an increase in maximum temperature of 13°F from 199°F to 212°F from December 17th to December 22nd.
    - The 100-foot thermocouple showed an increase in maximum temperature of 14°F from 198°F to 212°F from December 17th to December 21st.

SHEET: 1

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 11/20/2025 to 12/30/2025

SCS ENGINEERS

07224053.00 | December 31, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From December 23, 2025, through December 30, 2025, there were twenty-one (21) recorded temperature decreases and seven (7) recorded temperature increases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Due to recent heavy rains many thermocouples showed temporary drops in temperature that then returned to normal.

Additionally, as of December 11, 2025, five new TMPs (TMP-36, TMP-37, TMP-38, TMP-39, and TMP-40) have been installed and are online, in addition to the 12 TMPs previously installed as of April 4, 2025. None of these new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-08
    - The 100-foot thermocouple showed a decrease in maximum temperature of 16°F from 117°F to 101°F from December 22nd to December 29th.
    - The 125-foot thermocouple showed a decrease in maximum temperature of 18°F from 121°F to 103°F from December 23rd to December 30th.
    - The 150-foot thermocouple showed a decrease in maximum temperature of 23°F from 129°F to 106°F from December 22nd to December 29th.

- TP-11
    - The 30-foot thermocouple remained consistent with previous recorded temperatures.
    - The 80-foot thermocouple showed a decrease in maximum temperature of 17°F from 178°F to 161°F from December 23rd to December 30th.
    - The 125-foot thermocouple showed a decrease in maximum temperature of 14°F from 194°F to 181°F from December 21st to December 28th.
- TP-15
    - The 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 205°F to 194°F from December 22nd to December 28th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 14°F from 211°F to 197°F from December 22nd to December 27th.
    - The 75-foot thermocouple showed a decrease in maximum temperature of 14°F from 212°F to 198°F from December 22nd to December 28th.
    - The 100-foot thermocouple showed a decrease in maximum temperature of 15°F from 212°F to 197°F from December 21st to December 28th.

- TP-19
    - The 15-foot thermocouple showed a decrease in maximum temperature of 12°F from 141°F to 129°F from December 22nd to December 26th.

- TP-21
    - The 60-foot thermocouple showed an increase in maximum temperature of 14°F from 156°F to 170°F from December 24th to December 30th.
    - The 85-foot thermocouple showed a decrease in maximum temperature of 11°F from 209°F to 198°F from December 28th to December 30th.
    - The 110-foot thermocouple showed an increase in maximum temperature of 36°F from 217°F to 253°F from December 28th to December 30th.

- TP-24
    - The 15-foot thermocouple showed a decrease in maximum temperature of 13°F from 107°F to 94°F from December 22nd to December 29th.

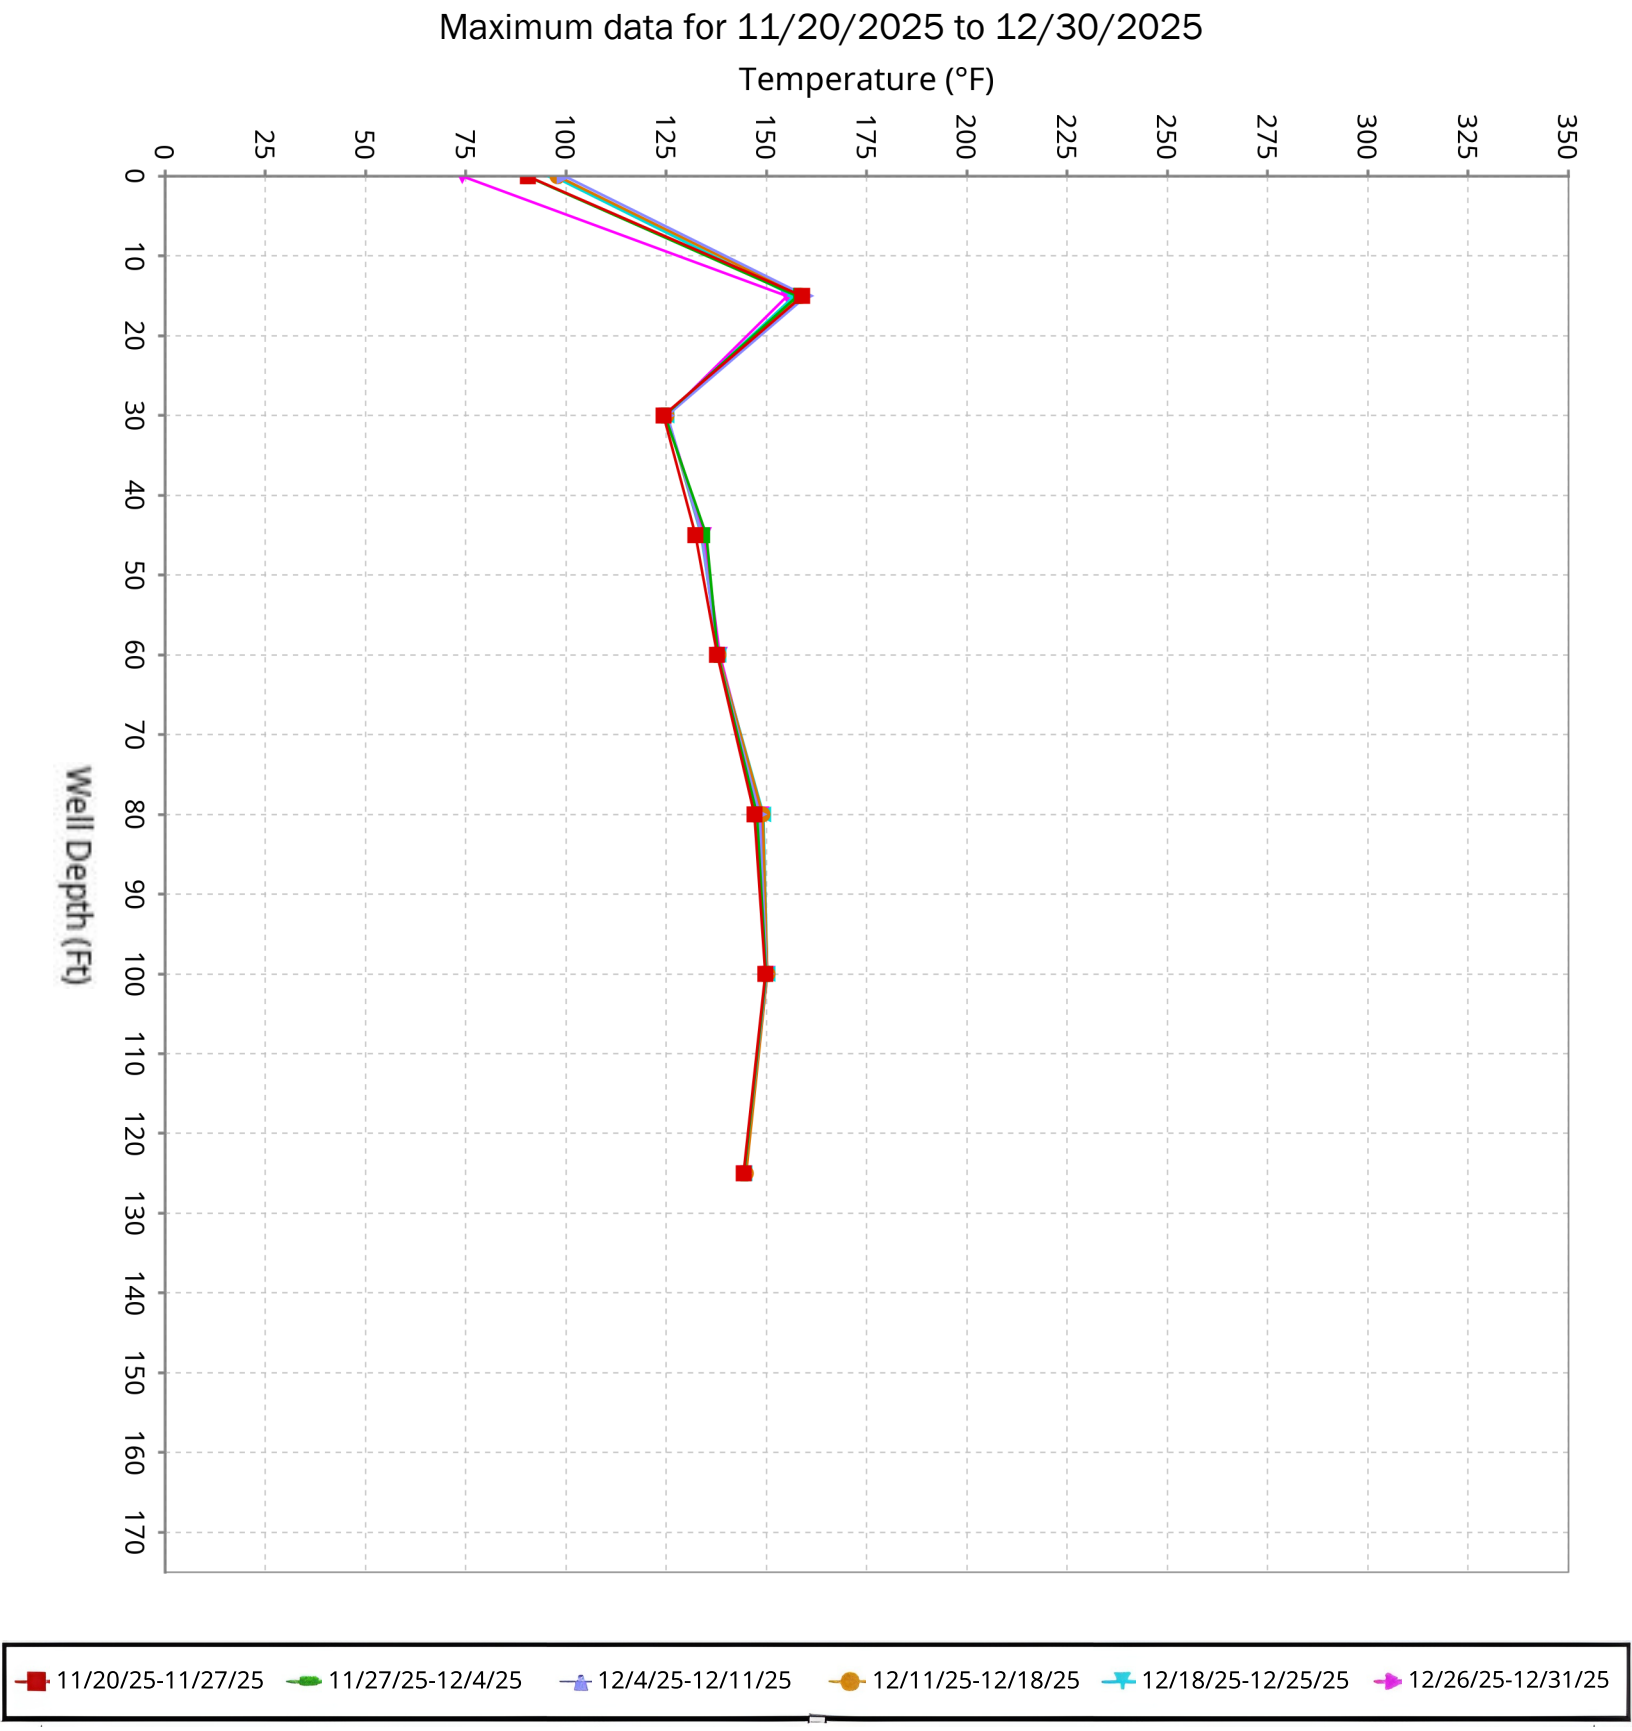

- TP-29
    - The 15-foot thermocouple showed a decrease in maximum temperature of 20°F from 134°F to 114°F from December 21st to December 28th.

- TP-30
    - The 15-foot thermocouple showed a decrease in maximum temperature of 14°F from 105°F to 91°F from December 22nd to December 26th.
    - The 30-foot thermocouple showed a decrease in maximum temperature of 19°F from 110°F to 91°F from December 22nd to December 26th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 25°F from 117°F to 92°F from December 22nd to December 26th.

- TP-36
    - The 15-foot thermocouple showed a decrease in maximum temperature of 44°F from 110°F to 66°F from December 23rd to December 27th, and then an increase in maximum temperature of 18°F from 66°F to 84°F from December 27th to December 30th.
    - The 30-foot thermocouple showed a decrease in maximum temperature of 54°F from 124°F to 70°F from December 22nd to December 25th, and then an increase in maximum temperature of 35°F from 70°F to 105°F from December 25th to December 30th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 58°F from 133°F to 75°F from December 22nd to December 25th, and then an increase in maximum temperature of 42°F from 75°F to 117°F from December 25th to December 30th.
    - The 75-foot thermocouple showed a decrease in maximum temperature of 39°F from 136°F to 97°F from December 22nd to December 26th, and then an increase in maximum temperature of 24°F from 97°F to 121°F from December 26th to December 30th.

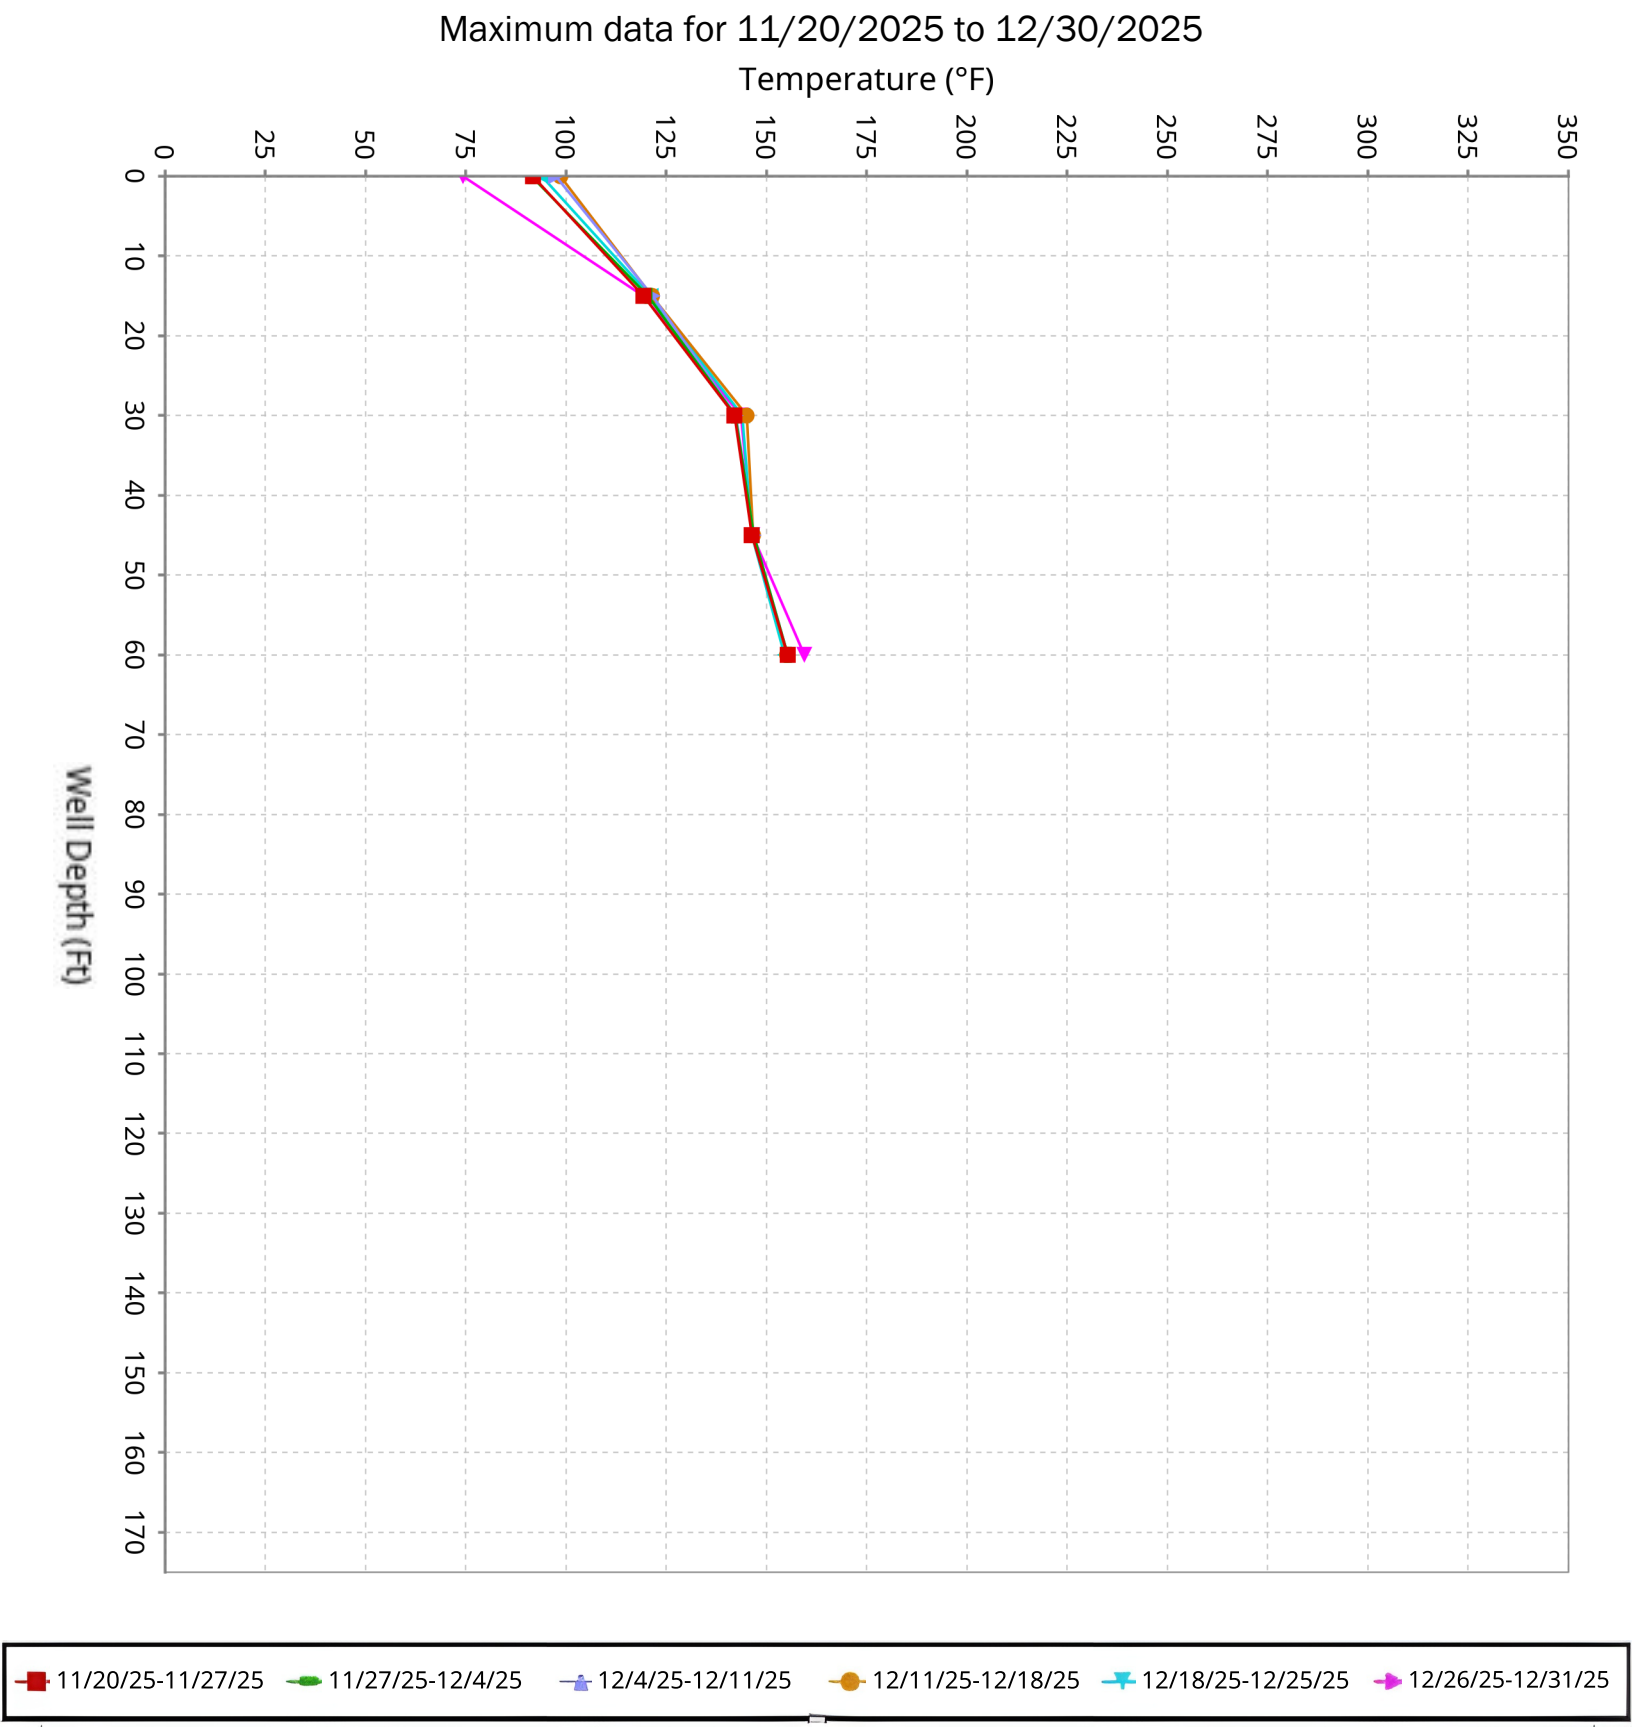

- TP-37
    - The 45-foot thermocouple showed an increase in maximum temperature of 16°F from 132°F to 148°F from December 23rd to December 27th, and then a decrease in maximum temperature of 14°F from 148°F to 134°F from December 27th to December 30th.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 11/27/2025 to 1/7/2026

SCS ENGINEERS

07224053.00 | January 8, 2026

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From December 30, 2025, through January 7, 2026, there were eleven (11) recorded temperature decreases and five (5) recorded temperature increases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Due to recent heavy rains many thermocouples showed temporary drops in temperature that then returned to normal.

Additionally, as of December 11, 2025, five new TMPs (TMP-36, TMP-37, TMP-38, TMP-39, and TMP-40) have been installed and are online, in addition to the 12 TMPs previously installed as of April 4, 2025. None of these new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-08
    - The 45-foot thermocouple showed a decrease in maximum temperature of 32°F from 129° F to 97°F from December 30th to January 4th.
    - The 100-foot thermocouple remained consistent with previous recorded temperatures.
    - The 125-foot thermocouple remained consistent with previous recorded temperatures.
    - The 150-foot thermocouple remained consistent with previous recorded temperatures.

- TP-11
    - The 80-foot thermocouple showed an increase in maximum temperature of 15°F from 161°F to 176°F from December 30th to January 6th and then a decrease in maximum temperature of 12°F from 176°F to 164°F from January 6th to January 7th.
    - The 125-foot thermocouple remained consistent with previous recorded temperatures.

- TP-15
    - The 30-foot thermocouple remained consistent with previous recorded temperatures.
    - The 45-foot thermocouple remained consistent with previous recorded temperatures.
    - The 75-foot thermocouple remained consistent with previous recorded temperatures.
    - The 100-foot thermocouple remained consistent with previous recorded temperatures.

- TP-16
    - The 45-foot thermocouple showed a decrease in maximum temperature of 16°F from 133° F to 117°F from January 2nd to January 3rd and then an increase in maximum temperature of 16°F from 117°F to 133°F from January 3rd to January 5th.

- TP-19
    - The 15-foot thermocouple remained consistent with previous recorded temperatures.

- TP-21
    - The 60-foot thermocouple remained consistent with previous recorded temperatures.
    - The 70-foot thermocouple showed a decrease in maximum temperature of 13°F from 186°F to 173°F from December 29th to January 4th.
    - The 85-foot thermocouple showed a decrease in maximum temperature of 23°F from 209°F to 186°F from December 28th to January 4th.
    - The 95-foot thermocouple showed a decrease in maximum temperature of 17°F from 220°F to 203°F from December 29th to December 31st.
    - The 110-foot thermocouple remained consistent with previous recorded temperatures.

- TP-24
    - The 15-foot thermocouple remained consistent with previous recorded temperatures.

- TP-29
    - The 15-foot thermocouple showed a decrease in maximum temperature of 10°F from 114°F to 104°F from December 28th to January 4th.

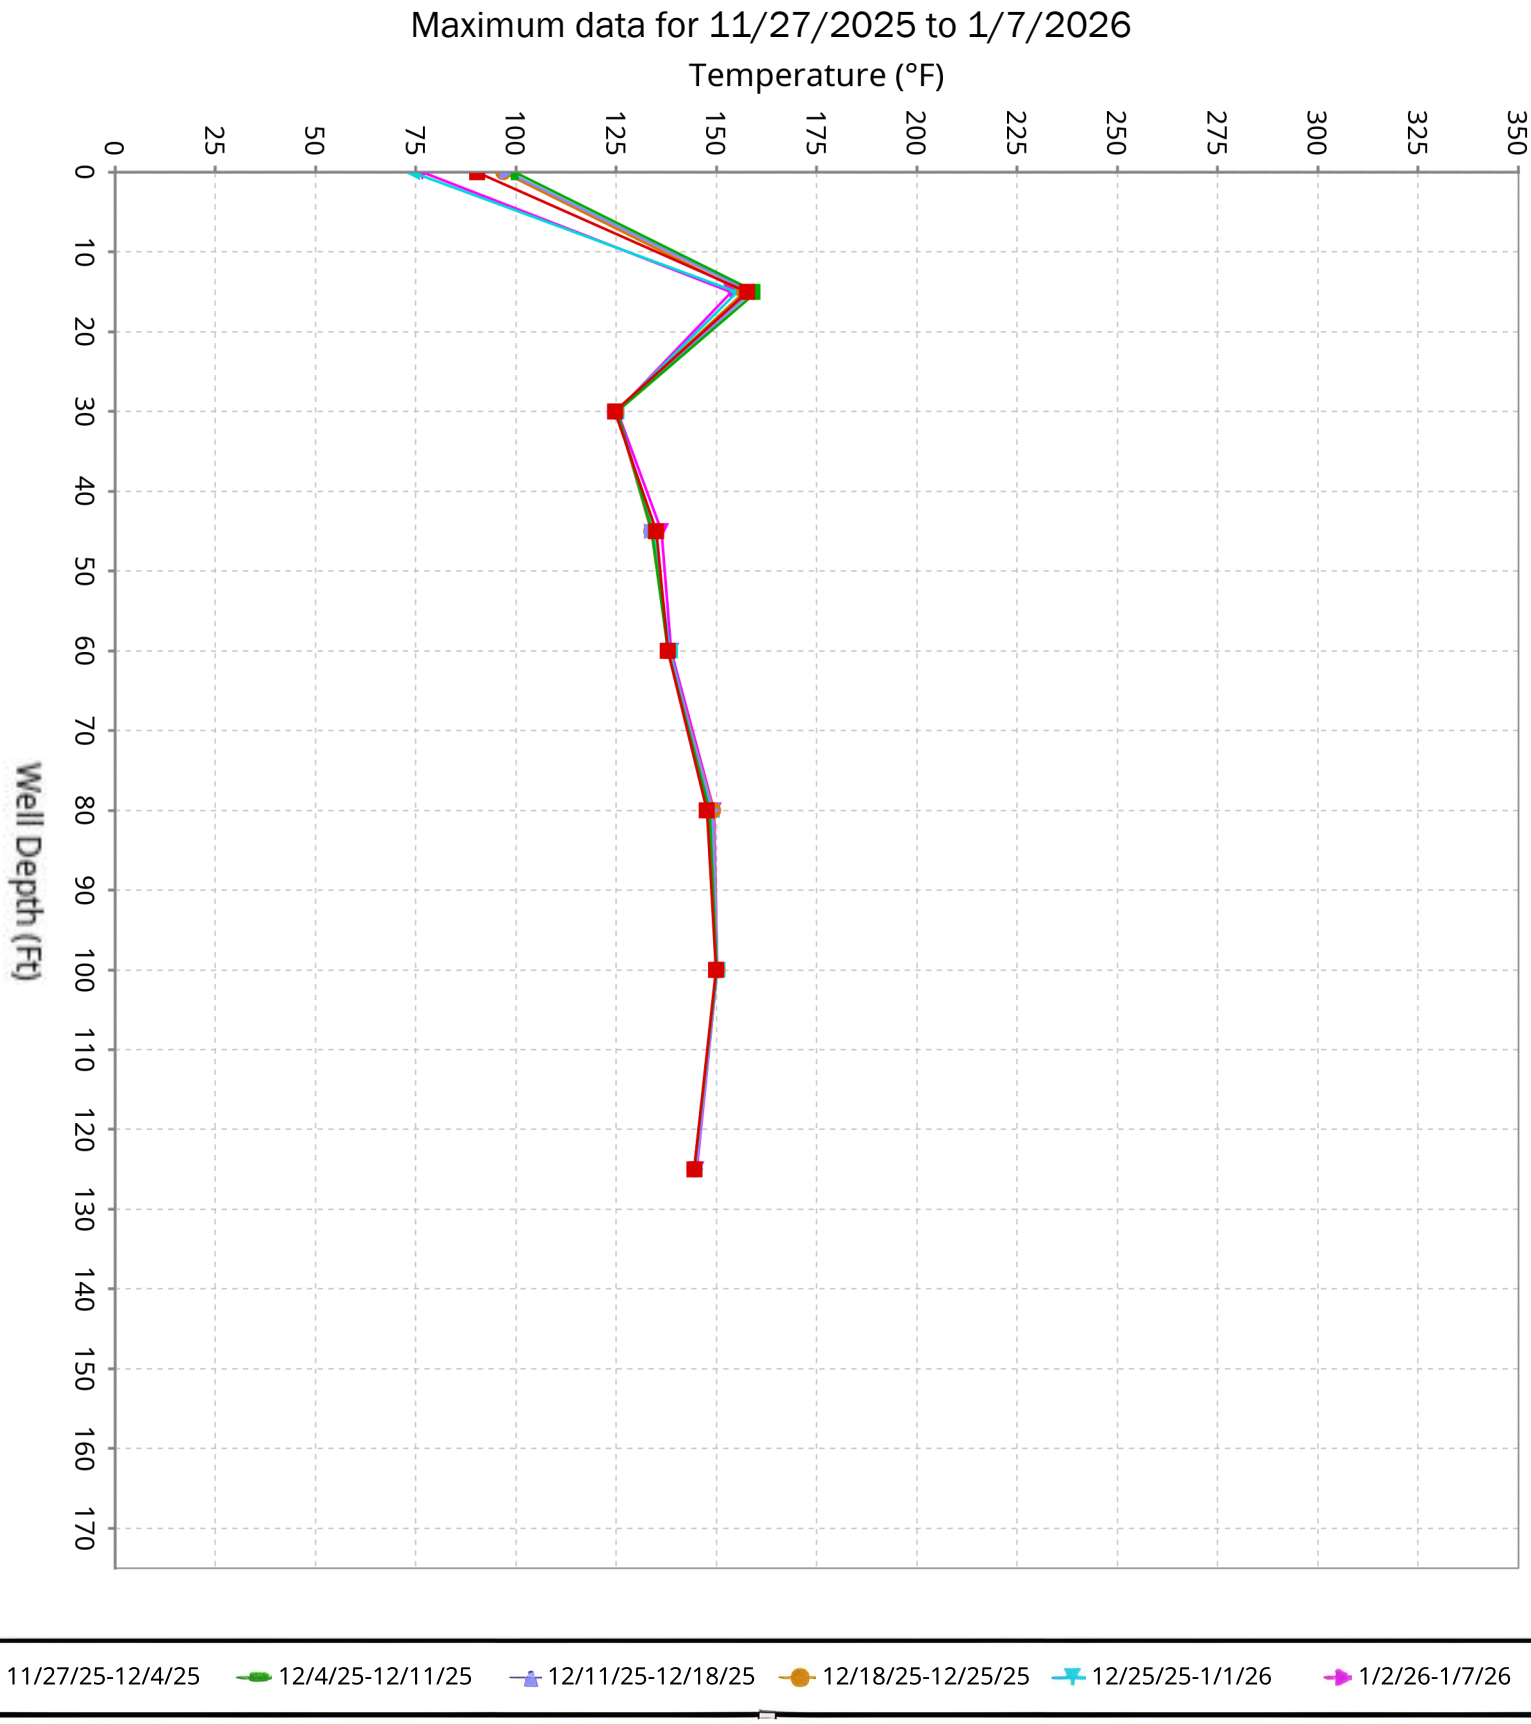

- TP-30
    - The 15-foot thermocouple remained consistent with previous recorded temperatures.
    - The 30-foot thermocouple remained consistent with previous recorded temperatures.
    - The 45-foot thermocouple remained consistent with previous recorded temperatures.

- TP-31
    - The 15-foot thermocouple showed a decrease in maximum temperature of 11°F from 110°F to 99°F from December 31st to January 4th.

- TP-36
    - The 15-foot thermocouple showed a decrease in maximum temperature of 23°F from 84° F to 61°F from December 31st to January 4th.
    - The 30-foot thermocouple showed a decrease in maximum temperature of 37°F from 106°F to 69°F from December 30th to January 4th, and then an increase in maximum temperature of 18°F from 69°F to 87°F from January 4th to January 7th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 38°F from 117°F to 79°F from December 30th to January 4th, and then an increase in maximum temperature of 21°F from 79°F to 100°F from January 4th to January 7th.
    - The 75-foot thermocouple showed a decrease in maximum temperature of 18°F from 121°F to 103°F from December 30th to January 4th, and then an increase in maximum temperature of 11°F from 103°F to 114°F from January 4th to January 7th.

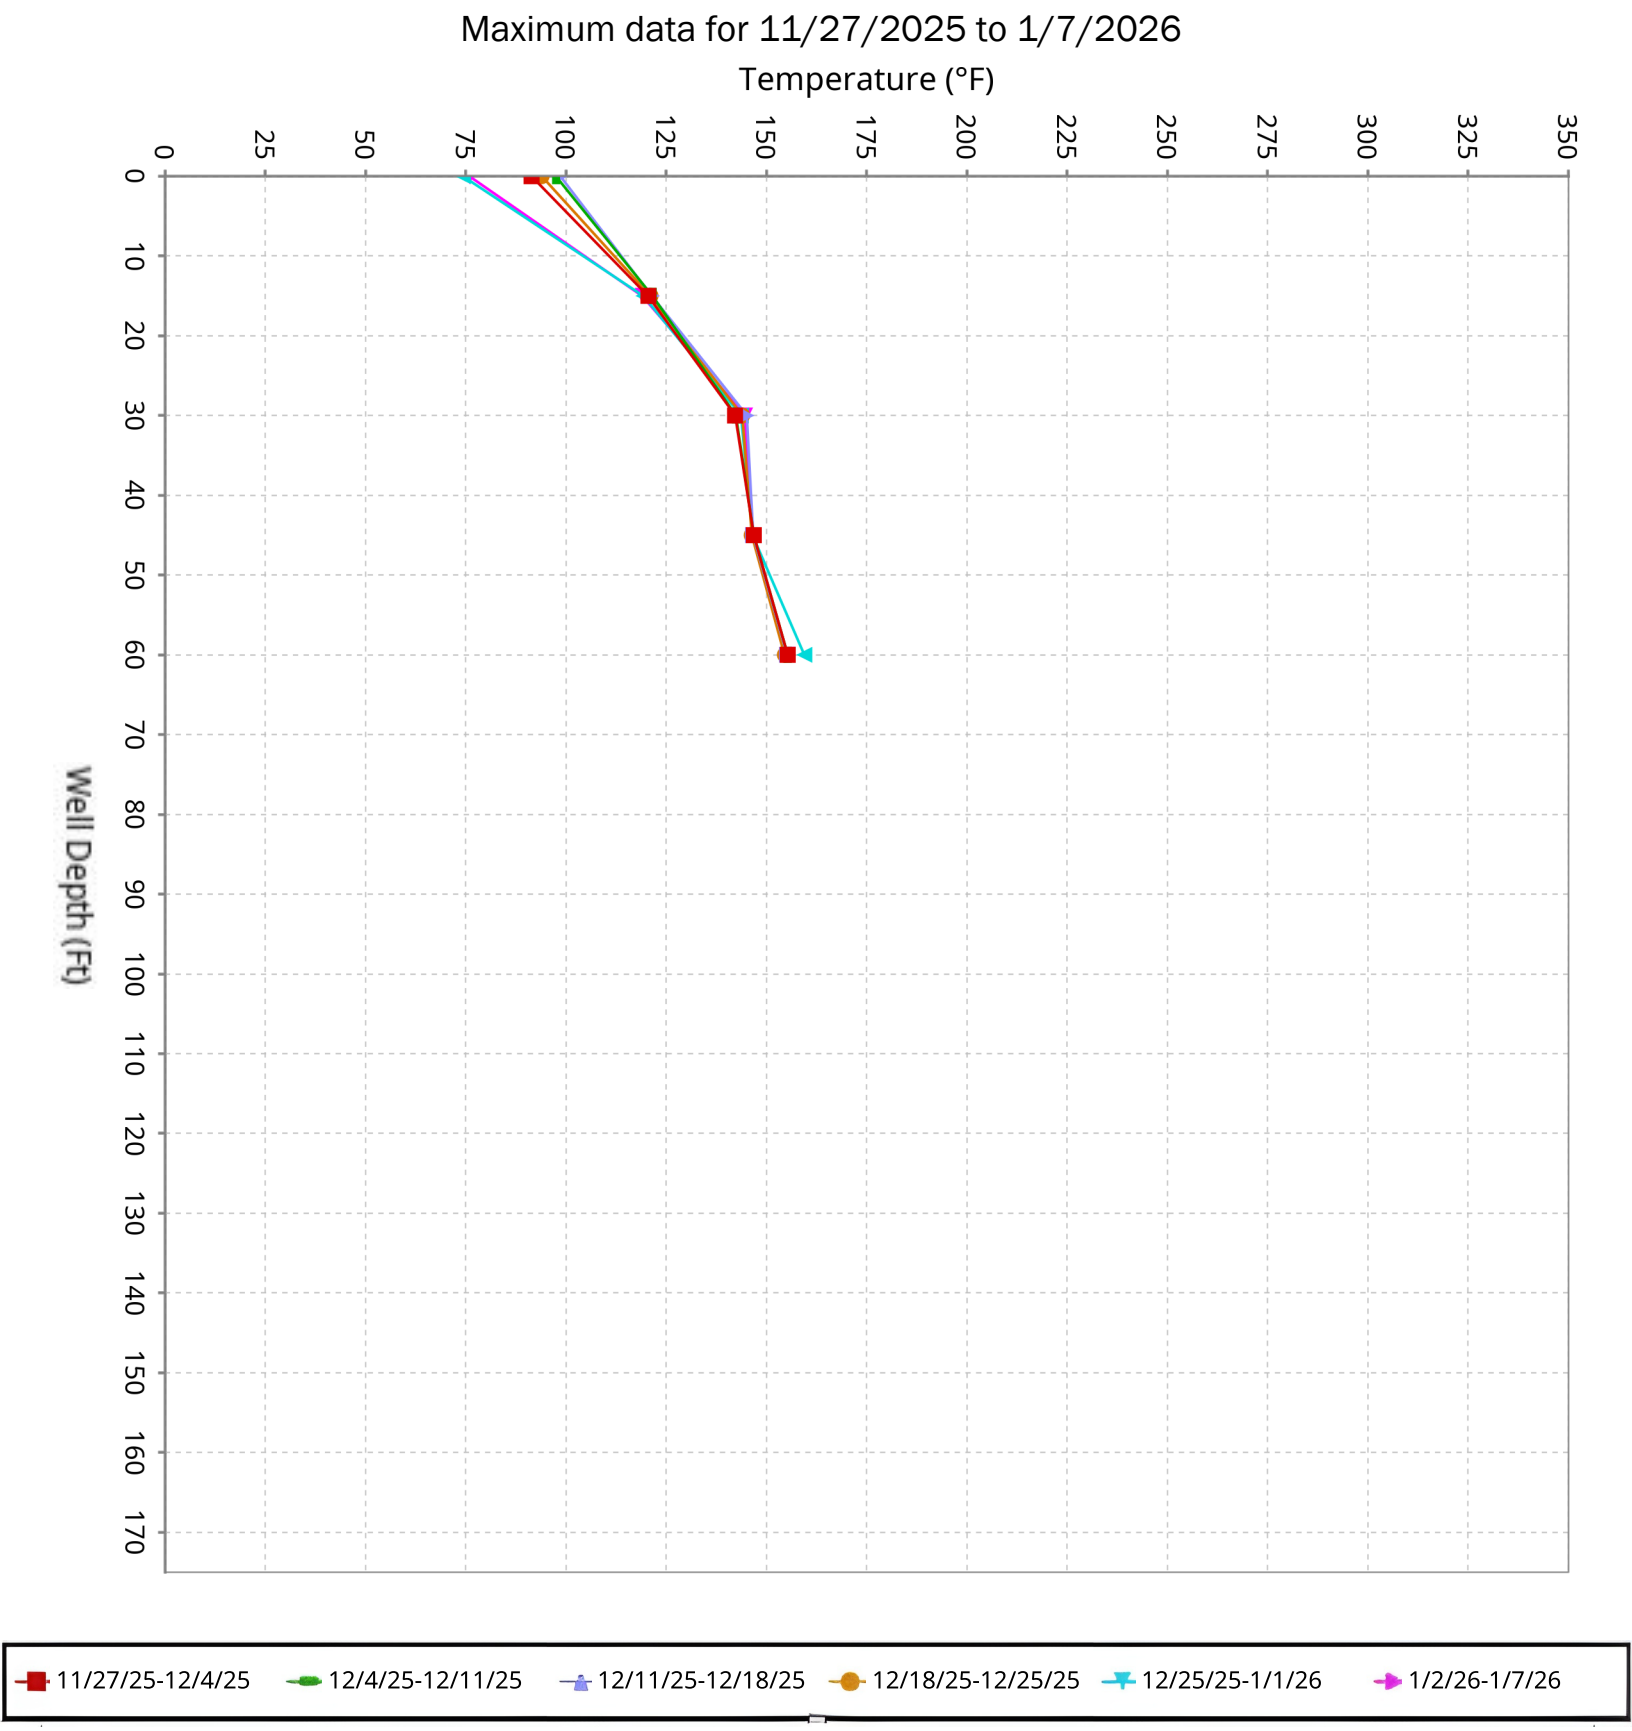

- TP-37
    - The 45-foot thermocouple remained consistent with previous recorded temperatures.

January 9, 2026

Reaction Committee

Report

January 9, 2026
File No. 01204123.21-13

Mr. Baitong Chen
South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, California 91765

Subject: Monthly Reaction Committee Determination on Reaction Area Boundary
Chiquita Canyon Landfill – Castaic, California

Dear Mr. Chen:

In accordance with Condition Nos. 9a and 9b of the Modified Stipulated Order for Abatement (SOFA) pertaining to the Chiquita Canyon Landfill (Landfill or Facility) (Case No. 6177-4), the Reaction Committee has reviewed newly acquired applicable data recorded during the month of December 2025, considered revisions of the estimated extent of elevated temperature landfill (ETLF) conditions exhibited at the subject Facility (referred to as the "Reaction Area" limits), and has prepared this determination on potentially revising the Reaction Area map.

Attachment A presents the Drawing, titled "Reaction Area Map", prepared by SCS Engineers (SCS) and dated January 8, 2026. The Drawing depicts the Reaction Area boundary as prescribed in Condition No. 9a, which corresponds to the limits of Cells 1/2A, 2B/3, 4, and Module 2B/3/4 P2, as a solid black line. The Drawing also depicts the estimated extent of ETLF conditions being experienced at the site based on the Reaction Committee's review of scientific data as a dashed magenta line. The rationale that serves as the basis for considering adjustments and modifications to the Reaction Area boundary (or the determination to maintain the decreed boundary), include the following:

- Landfill Gas (LFG) wellhead temperatures in excess of approximately 160 degrees Fahrenheit.
- Poor gas quality (defined as methane levels of less than 30 percent) in conjunction with methane-to-carbon dioxide (CH_4:CO_2) ratios less than 1.0.
- The concentration of hydrogen (H_2) in the LFG measured greater than 2 percent by volume.
- The concentration of carbon monoxide (CO) in the LFG measured greater than 2,000 ppm.
- Accelerated settlement of the landfill surface, defined as approximately 18 inches or greater within a 60-day period, and cracks in landfill cover. This corresponds to a strain value (i.e., settlement rate) rate of 3 percent per year for areas with a 300-foot waste column depth, which we believe is a reasonable average depth in the subject area of interest.
- First-hand observations of Landfill and/or SCS engineering, construction, and operations and maintenance (O&M) field personnel who are on-site related to: 1) atypical excess leachate quantities (presence and quantity of liquids); 2) instances of pressurized liquids emitting from the landfill surface, from boreholes during drilling, and from LFG wells; and, 3) the

characteristics of the odors originating from the select areas of the waste footprint (often described as “chemical-like” and distinctly different from typical LFG or landfill working face odors).

- Observations of subsurface waste conditions and characteristics as noted on borehole drilling logs for recently installed new wells and/or probes.

- Subsurface temperatures recorded at the in-situ waste temperature probes during December 2025.

- Temperature of gas or liquids measured at depth within the LFG well riser pipe (using an automated transmitter or manual field instrumentation).

- Subsurface temperature and pressures associated with drilling activities for new LFG extraction wells during December 2025, if applicable.

CONSIDERATIONS FOR POTENTIAL ADJUSTMENTS TO THE ESTIMATED EXTENT OF ETLF CONDITIONS (DASHED MAGENTA LINE)

In making its monthly determinations, the Reaction Committee evaluates the above set of data parameters, in conjunction with one another, to identify meaningful trends indicating ETLF conditions, as opposed to fluctuations exhibited in isolated datapoints.

Each month, the Reaction Committee scrutinizes particular areas of the Landfill that have previously exhibited abnormal or fluctuating data, when applicable. As discussed below, despite minor variances in discrete areas of the landfill, the Reaction Committee has not discerned any meaningful trends with respect to the December 2025 data that would indicate the reaction has expanded into these areas.

Near CV-24009

Well CV-24009 is positioned within 60 feet or so of the delineated boundary line and the data recorded during December demonstrates the conditions are generally unchanged during the past five months. As noted in previous reports, the Reaction Committee suspects that gas movement from within the reaction area via existing horizontal collectors is the potential cause of the heat and longer-term trend of marginal to poor quality gas at this well.

Near Eastern Boundary of Cell 1/2A

The Reaction Committee considered the data compiled from wells positioned east of the current delineated boundary within Cell 1/2A, specifically wells CV-2305, CV-24076, CV-24148, CV-24219, CV-2558. These wells are positioned within 200 feet of the delineated boundary line. These wells are experiencing marginal methane content, typically less than 10 percent, except for CV-24076, which exhibited an average methane concentration of 21 percent during December. However, the average wellhead temperatures during December for CV-2305, CV-24076, CV-24148, and CV-24219 were 147, 156, 140, and 150 degrees F, respectively. The average wellhead temperature during

December at well CV-2558 was 170 degrees F. The hydrogen content at wells CV-2305, CV-24076, CV-24148, and CV-2558 was 13, 5.2, 8.0, and 8.8 percent, respectively.

At CV-24219, there is a relationship between the increase in temperature and decrease in methane quality due to the well having been reactivated in December after being temporarily decommissioned in September to enable deployment of the new Ethylene Vinyl Alcohol (EVOH)/High-Density Polyethylene (HDPE) exposed geomembrane cover (EGC).

A review of the seven adjacent wells in closest proximity (CV-2319, 24065/TP-17, 2552, 2557, 25103, 25105S, and 25107D) indicates that all seven wells have relatively low temperatures (less than 152 degrees F) that do not correspond to reaction conditions and six of the seven wells have methane concentrations greater than 19 percent, thus indicating methanogenesis is actively occurring in the surrounding region.

Considering the relatively low temperatures that are typically displayed at these wellheads, along with the fact that these temperatures may be relatively short-term conditions associated with the reactivation after temporary decommissioning of LFG system infrastructure due to deployment of the EVOH/HDPE EGC, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include any of the portions of the waste footprint inclusive of these five wells along the eastern boundary of Cell 1/2A is warranted at this time.

Near CV-2344

Well CV-2344 is positioned within 100 feet or so of the delineated boundary. It recorded LFG wellhead temperatures in the range of 133 to 161 degrees F during December, and the average temperature during October through December was 146 degrees F. Although the LFG quality at CV-2344 is poor, with an average methane concentration of 14 percent during October through December, the temperatures recorded at this well are inconsistent with reaction conditions. The average LFG wellhead temperature at adjacent well CV-24066 measured during this period was 149 F and the average methane concentration was 28 percent. Furthermore, the maximum in-situ waste temperatures recorded in nearly TP-05 are less than 164 degrees F. The Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of CV-2344 is warranted at this time.

Subareas Within Data-Driven Reaction Area Boundary

As depicted on the isothermal gradient range maps that are included as **Attachment C** of this monthly Reaction Area Determination Report, the landfill gas wellhead temperatures recorded each month demonstrate several subareas within the data-driven boundary that consistently exhibit substantially lower temperatures than other wellheads within this boundary. One subarea is positioned in the south central portion of the data-driven reaction area and another is positioned in the eastern central portion of the data-driven reaction area. Both subareas contain wells exhibiting temperatures that are below 145 degrees F and many are as low as 130 degrees F. The Reaction Committee continues to review and analyze the data recorded at wells within these subareas to assess whether various operational parameters indicate that the severity of the reaction is diminishing within these subareas, as evidenced by the decreasing temperatures, increasing methane-to-carbon dioxide ratios, and decreasing hydrogen content at select wells within these subareas.

TEMPERATURE MONITORING PROBE DATA

The Reaction Committee reviewed the temperature measurements recorded during December 2025 by the in-situ temperature monitoring probes. As of December 2025, seven of the 37 probes (TP-2, TP-3, TP-9, TP-11, TP-15, TP-18, and TP-21) are located within the current estimated extent of ETLF conditions (dashed magenta line). Of the remaining thirty (30) probes positioned outside of the boundary, eleven probes are positioned within relatively close proximity (within 200 feet) of this boundary.

The temperature monitoring probe weekly reports submitted in early December noted that certain temperature values measured at TP-08 were considered to be invalid because of equipment malfunction. This issue was initially identified in September, and repairs to the loose wiring were accomplished in mid-October. However, the anomalous readings continued during November and into the beginning of December, so the Reaction Committee did not consider these temperature values to be valid during our monthly analysis.

The Reaction Committee evaluated the temperatures recorded in all 37 TMPs, with particular attention to the following maximum temperatures:

- TP-24: 197 degrees F at the 265-foot interval;
- TP-25: 208 degrees F at the 130-foot interval;
- TP-26: 176 degrees F at the 150-foot interval;
- TP-29: 185 degrees F at the 240-foot interval;
- TP-31: 189 degrees F at the 230-foot interval; and
- TP-37: 183 degrees F at the 180-foot interval.

These thermocouples recorded relatively consistent temperatures over the previous 6-week period of November 20 through December 30, 2025, except for TP-25, which has experienced unusual fluctuations since mid-October, which may be attributed to wells and pumps in the surrounding vicinity being temporarily decommissioned and then reactivated to enable deployment of the EVOH/HDPE geomembrane cover.

The maximum temperatures recorded during December at specific thermocouples in TP-24, TP-29, and TP-31 are at or greater than 185 degrees F, which may not be significantly elevated for the thermocouples within these probes that are positioned within the deeper waste zones but are potentially indicative of heat generation and accumulation affiliated with reaction conditions when present along with changes in gas composition, excessive leachate production, changes in leachate composition, accelerated settlement, excessive pressures, and other ETLF characteristics. There is less differentiation between the 30-day maximum temperatures in these three probes compared to the 30-day maximum temperatures measured at the four probes within the current estimated extent of ETLF conditions (dashed magenta line), specifically TP-3, TP-9, TP-15, and TP-21. However, the four wells surrounding TP-24 (CV-24086, CV-24087, CV-24174, and CV-24175) recorded average LFG wellhead temperatures during October through December of 114 degrees F, which is well below the range associated with ETLF conditions. Those four wells also recorded average methane concentrations of 40 percent during this period, which is consistent with typical landfill gas methane production for this facility. The three wells surrounding TP-29 (CV-24091, CV-24171, and CV-24207) recorded average LFG wellhead temperatures during October through December of 122 degrees F and average methane concentrations of 48 percent during this period, which suggest normal

subsurface decomposition conditions affiliated with methane production. The two wells adjacent to TP-31 (CV-2319 and CV-24111) recorded average LFG wellhead temperatures during October through December of 127 degrees F, which is well below the range associated with ETLF conditions. While the average methane concentration at CV-2319 is 19 percent, the average methane concentration at CV-24111 during the past three months was 44 percent, which is consistent with typical landfill gas methane production for this facility. So, the wells surrounding these three probes do not exhibit evidence of atypical heat or the LFG composition associated with ETLF conditions.

Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area to include the portions of the waste footprint inclusive of TP-24, TP-25, TP-26, TP-29, TP-30, TP-31, and TP-37 is warranted at this time.

HYDROGEN CONCENTRATIONS

The Reaction Committee also evaluated the concentration of H_2 in LFG during December 2025. Recall that certain wells positioned to the south and east of the Reaction Area boundary (where dewatering pumping experienced some temporary decommissioning due to cover installation and has been reactivated in select subareas) have periodically demonstrated some increased H_2 content in the LFG during the Reaction Committee's review of the data in previous months, which similarly was the case for the December 2025 data. The Reaction Committee noted in its review of the data that these wells did not exhibit elevated temperatures, except for wells CV-2344, CV-24076, CV-24148, and CV-2558. The conditions at each of these four wells are discussed in other sections of this report and, except for CV-2558, which was inactive for an extended period of time, the elevated temperatures are short-term occurrences and the average temperatures do not offer evidence of the increased heat that is typical with ETLF conditions at the wells exhibiting atypical H_2 concentrations. As noted previously, the Reaction Committee suspects this increased H_2 content may be attributable to substantial dewatering being accomplished throughout the Reaction Area and may be associated with gas movement from within the Reaction Area by existing horizontal collectors in close proximity. Thus, the presence of elevated H_2 in these isolated locations does not suggest that ETLF conditions are expanding south and east of the delineated boundary. Accordingly, the Reaction Committee does not believe an adjustment to the boundary of the Reaction Area is warranted at this time.

CONCLUSION

As presented on the Drawing included as **Attachment A**, the estimated extent of ETLF conditions (dashed magenta line) is fully contained within the Reaction Area boundary decreed in the SOFA (solid black line). Because the ETLF conditions are fully contained within the Reaction Area boundary and have not expanded into a new cell, the Reaction Committee finds no basis to modify the Reaction Area boundary as prescribed in Condition 9a at this time.

There was no dissenting opinion among the Reaction Committee members regarding this monthly determination. Supporting data is presented on the Drawing included as **Attachment A.** The maximum temperature measurements recorded at the 32 in-situ waste temperature monitoring probes (both 7-Day and 30-Day values) during December are presented in **Attachment B** in graphical format. The LFG wellhead temperatures recorded at the extraction wells for the entire Landfill footprint are reflected on the isothermal gradient range map presented as **Attachment C**. The CH_4:CO_2 ratios measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment D**. The H_2 concentrations

measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment E**. The CO concentrations measured at the LFG wellheads in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment F**. The landfill surface settlement isopach values measured on a quarterly basis (October 1, 2025 compared to December 30, 2025) in the vicinity of the data-driven Reaction Area boundary are depicted on the range map presented as **Attachment G**. The electronic database and recordkeeping platform enables these measurements to be downloaded into a tabular spreadsheet format, which can be submitted to the South Coast Air Quality Management District under separate cover, if requested.

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks

for 11/20/2025 to 12/30/2025

SCS ENGINEERS

07224053.00 | December 31, 2025

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From December 23, 2025, through December 30, 2025, there were twenty-one (21) recorded temperature decreases and seven (7) recorded temperature increases that triggered the notification limits set forth in the LEA's October 4, 2024 letter. Due to recent heavy rains many thermocouples showed temporary drops in temperature that then returned to normal.

Additionally, as of December 11, 2025, five new TMPs (TMP-36, TMP-37, TMP-38, TMP-39, and TMP-40) have been installed and are online, in addition to the 12 TMPs previously installed as of April 4, 2025. None of these new TMPs indicate reaction temperatures occurring outside of the currently delineated data-driven reaction area boundary, and the four TMPs that were able to be drilled to within 25 feet of the liner (TMP-24, TMP-27, TMP-31, and TMP-32) show significantly cooler temperatures at the deepest thermocouple, as expected due to the cooling from the underlying earth.

Chiquita provides the following updates:

- TP-08
    - The 100-foot thermocouple showed a decrease in maximum temperature of 16°F from 117°F to 101°F from December 22nd to December 29th.
    - The 125-foot thermocouple showed a decrease in maximum temperature of 18°F from 121°F to 103°F from December 23rd to December 30th.
    - The 150-foot thermocouple showed a decrease in maximum temperature of 23°F from 129°F to 106°F from December 22nd to December 29th.

- TP-11
    - The 30-foot thermocouple remained consistent with previous recorded temperatures.
    - The 80-foot thermocouple showed a decrease in maximum temperature of 17°F from 178°F to 161°F from December 23rd to December 30th.
    - The 125-foot thermocouple showed a decrease in maximum temperature of 14°F from 194°F to 181°F from December 21st to December 28th.
- TP-15
    - The 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 205°F to 194°F from December 22nd to December 28th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 14°F from 211°F to 197°F from December 22nd to December 27th.
    - The 75-foot thermocouple showed a decrease in maximum temperature of 14°F from 212°F to 198°F from December 22nd to December 28th.
    - The 100-foot thermocouple showed a decrease in maximum temperature of 15°F from 212°F to 197°F from December 21st to December 28th.

- TP-19
    - The 15-foot thermocouple showed a decrease in maximum temperature of 12°F from 141°F to 129°F from December 22nd to December 26th.

- TP-21
    - The 60-foot thermocouple showed an increase in maximum temperature of 14°F from 156°F to 170°F from December 24th to December 30th.
    - The 85-foot thermocouple showed a decrease in maximum temperature of 11°F from 209°F to 198°F from December 28th to December 30th.
    - The 110-foot thermocouple showed an increase in maximum temperature of 36°F from 217°F to 253°F from December 28th to December 30th.

- TP-24
    - The 15-foot thermocouple showed a decrease in maximum temperature of 13°F from 107°F to 94°F from December 22nd to December 29th.

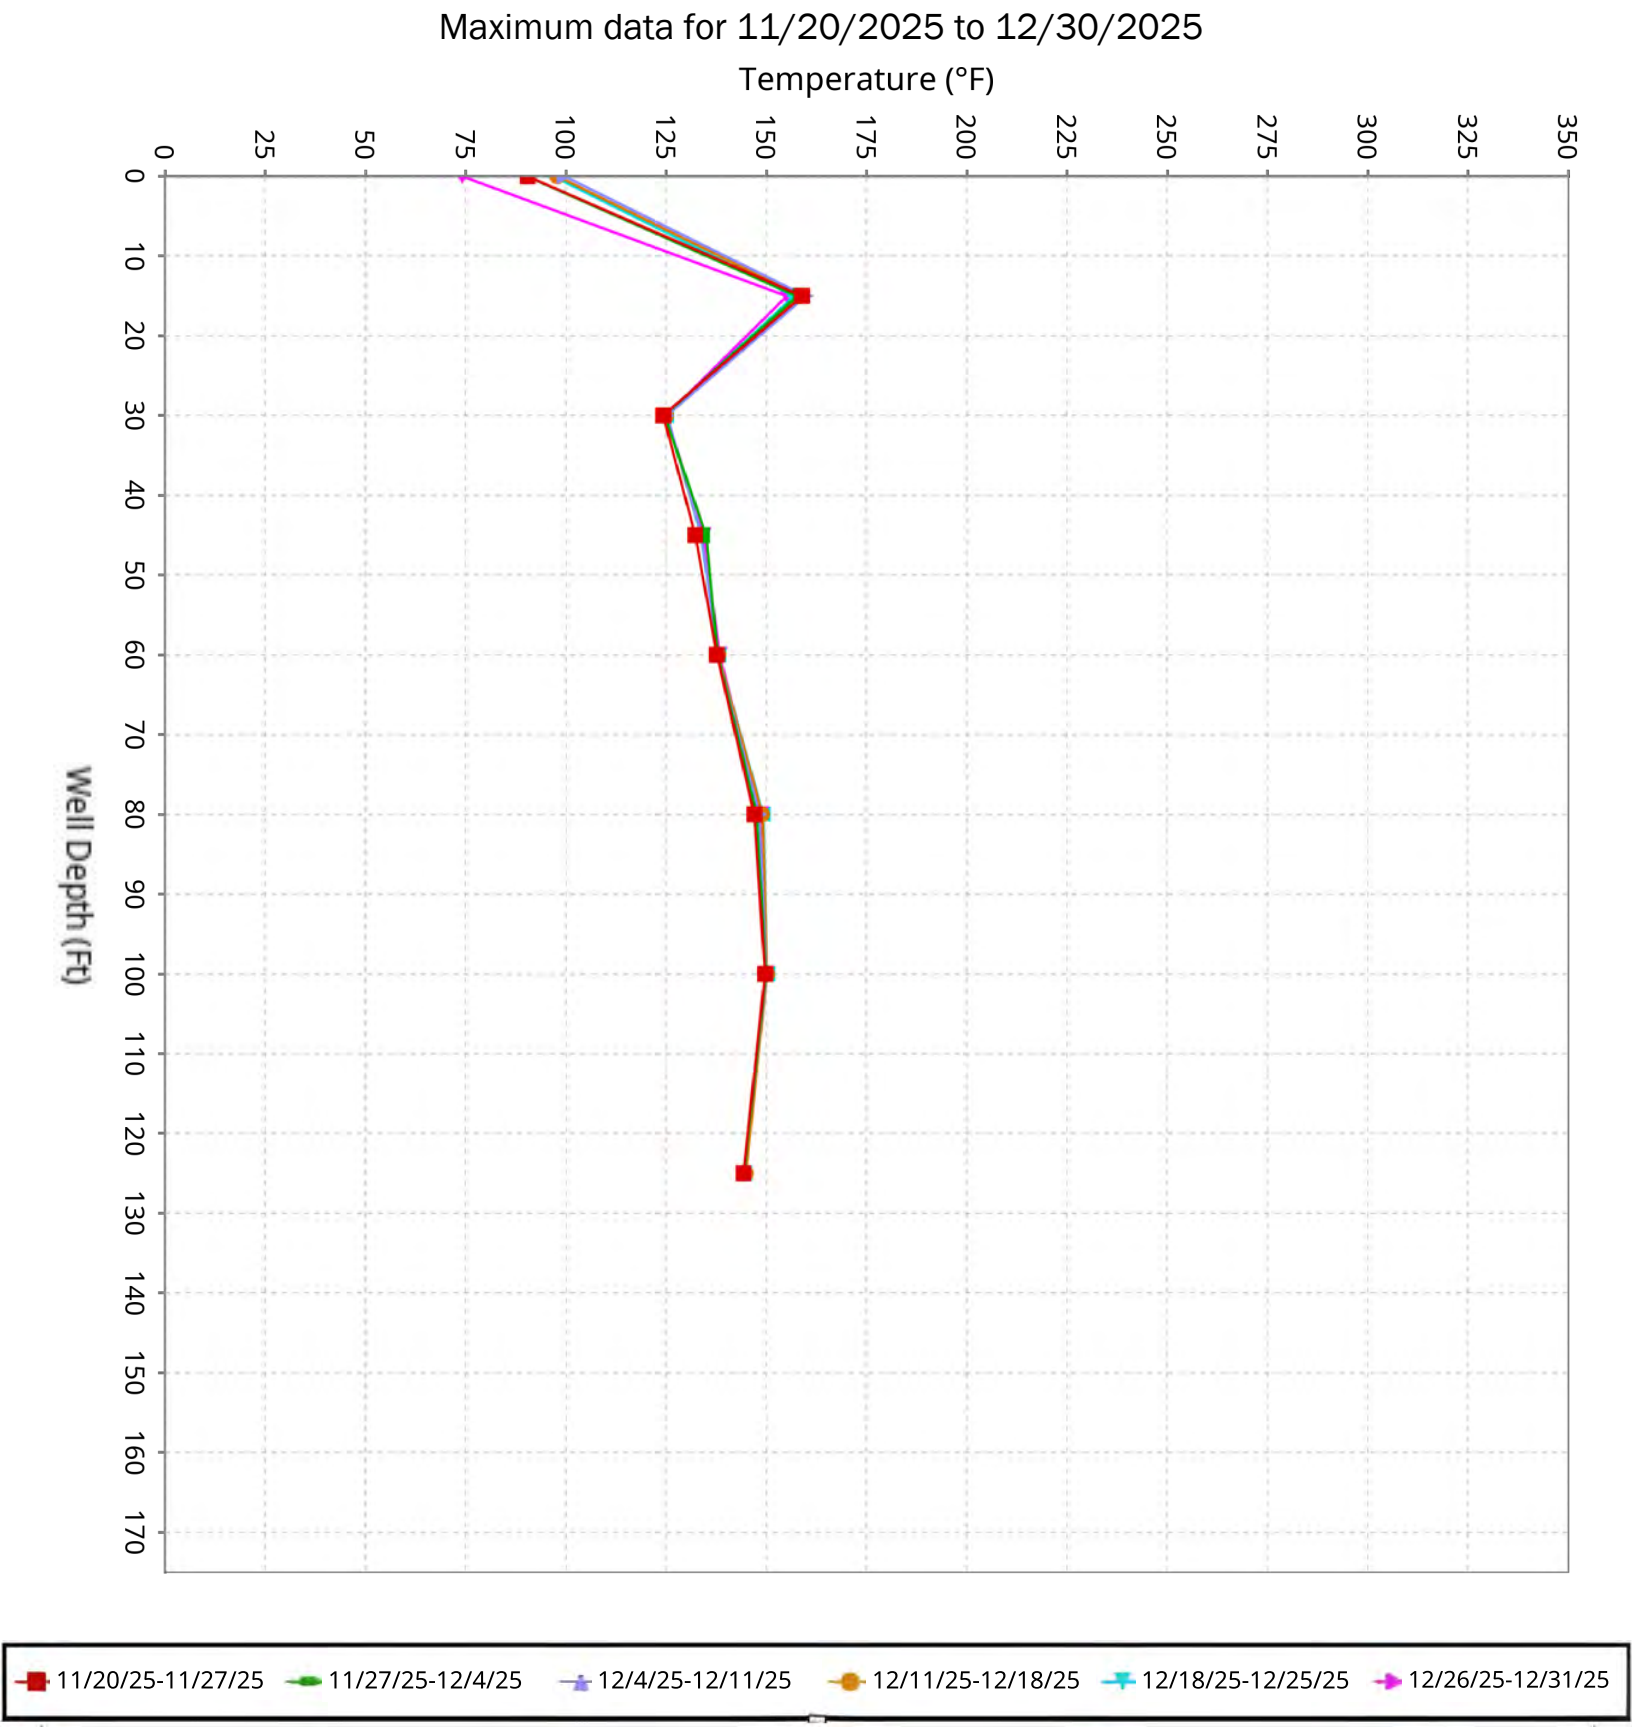

- TP-29
    - The 15-foot thermocouple showed a decrease in maximum temperature of 20°F from 134°F to 114°F from December 21st to December 28th.

- TP-30
    - The 15-foot thermocouple showed a decrease in maximum temperature of 14°F from 105°F to 91°F from December 22nd to December 26th.
    - The 30-foot thermocouple showed a decrease in maximum temperature of 19°F from 110°F to 91°F from December 22nd to December 26th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 25°F from 117°F to 92°F from December 22nd to December 26th.

- TP-36
    - The 15-foot thermocouple showed a decrease in maximum temperature of 44°F from 110°F to 66°F from December 23rd to December 27th, and then an increase in maximum temperature of 18°F from 66°F to 84°F from December 27th to December 30th.
    - The 30-foot thermocouple showed a decrease in maximum temperature of 54°F from 124°F to 70°F from December 22nd to December 25th, and then an increase in maximum temperature of 35°F from 70°F to 105°F from December 25th to December 30th.
    - The 45-foot thermocouple showed a decrease in maximum temperature of 58°F from 133°F to 75°F from December 22nd to December 25th, and then an increase in maximum temperature of 42°F from 75°F to 117°F from December 25th to December 30th.
    - The 75-foot thermocouple showed a decrease in maximum temperature of 39°F from 136°F to 97°F from December 22nd to December 26th, and then an increase in maximum temperature of 24°F from 97°F to 121°F from December 26th to December 30th.

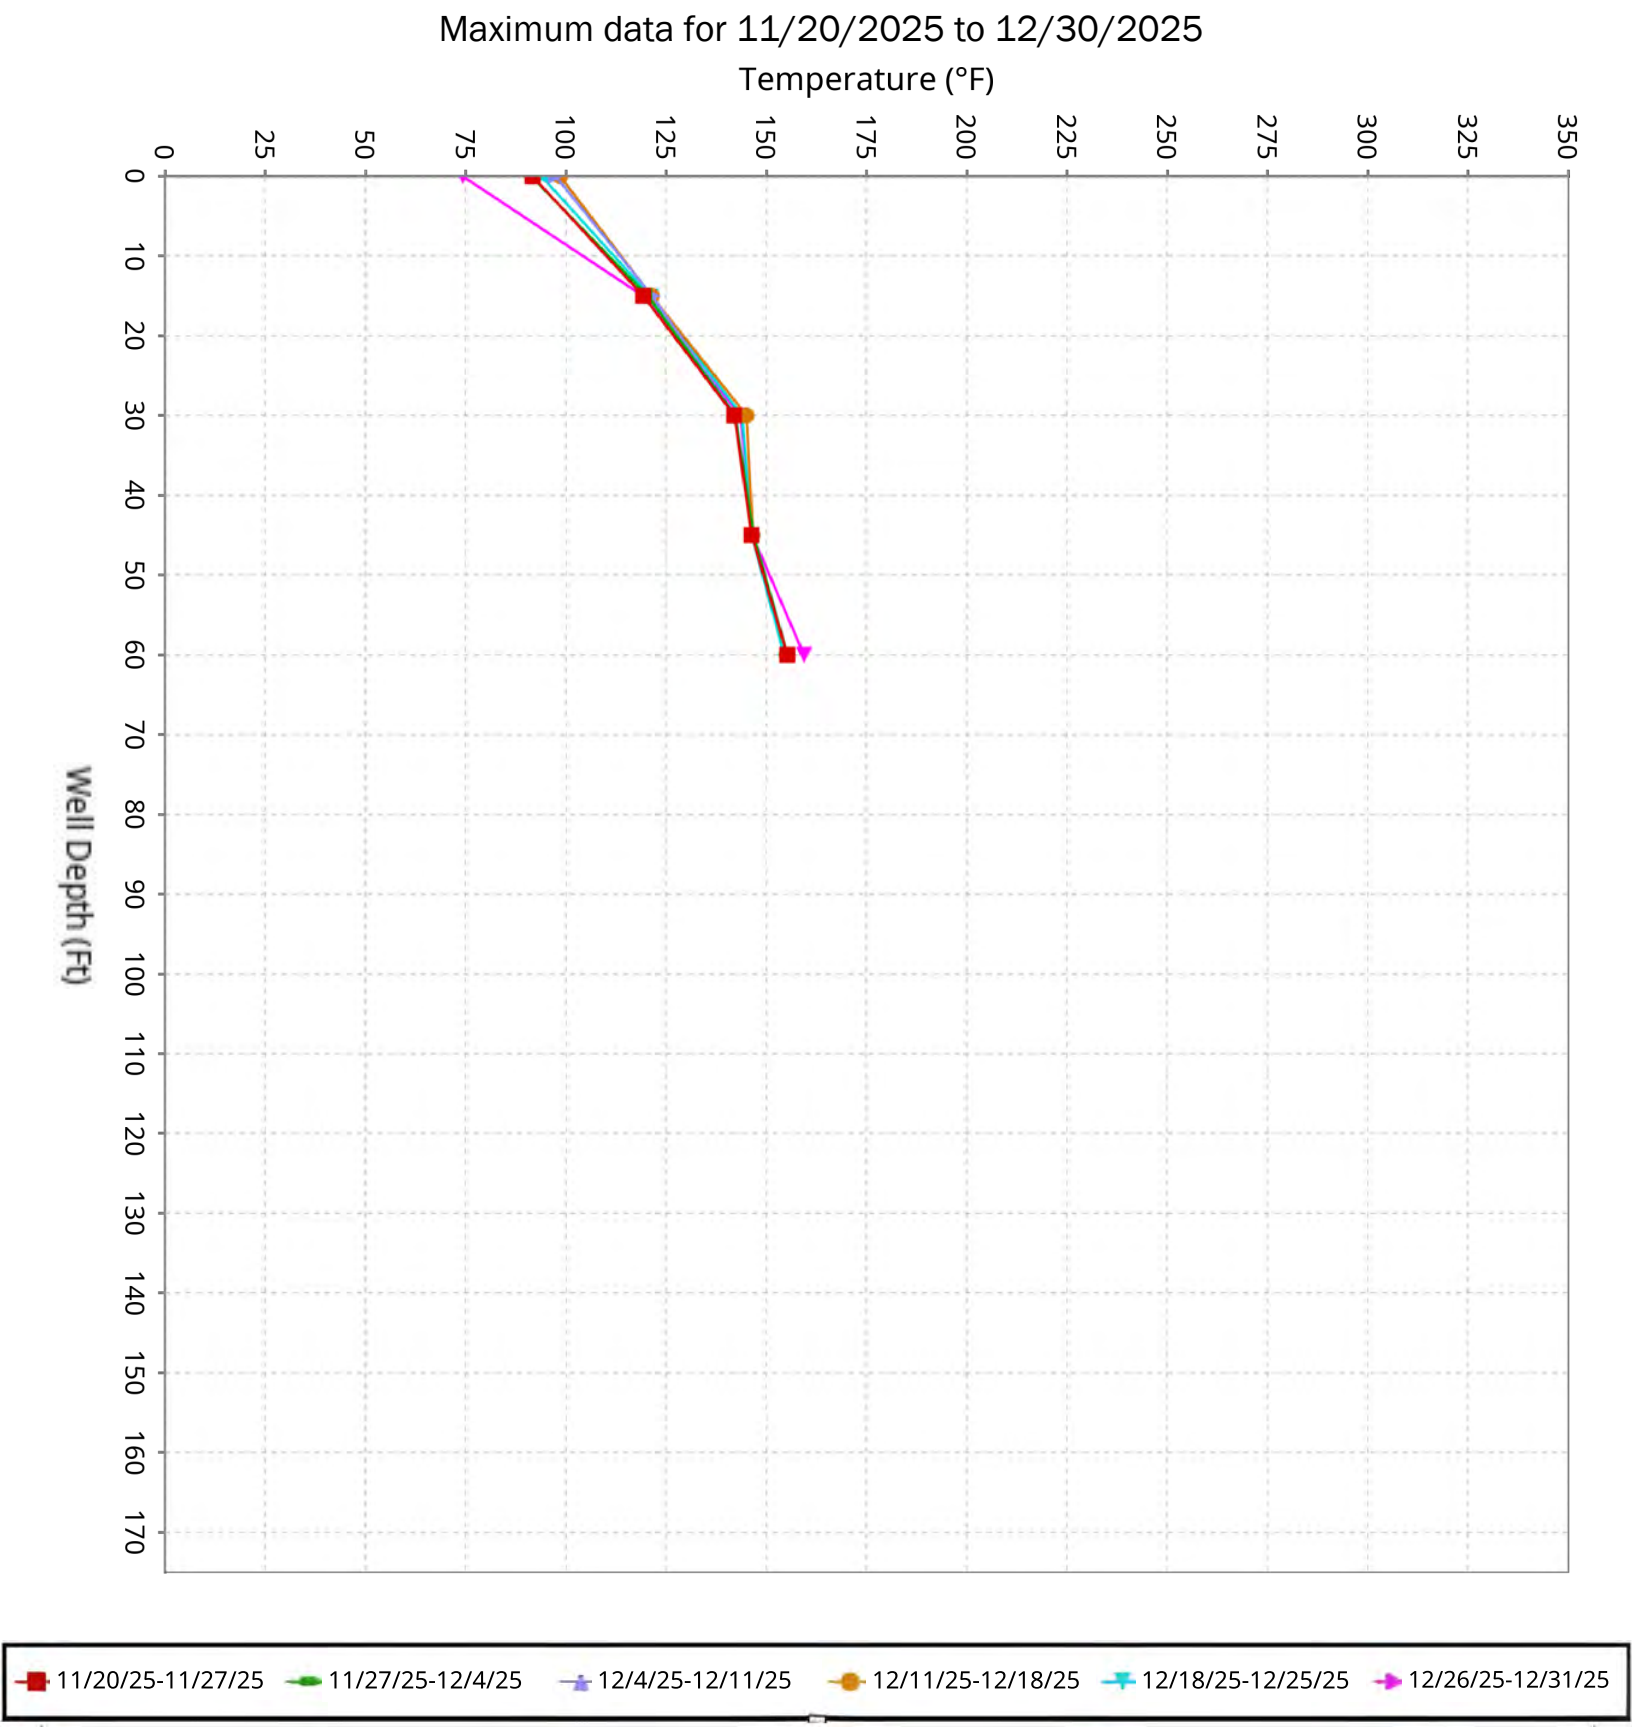

- TP-37
    - The 45-foot thermocouple showed an increase in maximum temperature of 16°F from 132°F to 148°F from December 23rd to December 27th, and then a decrease in maximum temperature of 14°F from 148°F to 134°F from December 27th to December 30th.
