Subject: RE: Chiquita Canyon Landfill – TMP Temperature Submittal
Attachments: Daily Maximum Temp Borehole Report - 3-18-26.xlsx; Borehole Profiles Six Week Maximum - 3-18-26.pdf

[EXTERNAL SENDER: Use caution with links/attachments]

In accordance with the LEA’s June 6, 2024 Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from February 5, 2026, through March 18, 2026, with a map of the maximum temperatures recorded in the past week and the below narrative on recorded temperature data. We included a separate map demonstrating the locations of the 40 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD.

From March 12, 2026, through March 18, 2026, there was one recorded temperature decrease and one recorded temperature increase that triggered the notification limits set forth in the LEA’s October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
 - The 125-foot thermocouple went offline on March 3rd and TP-8 was offline between March 6th and March 9th for evaluation and maintenance. Upon removing the thermocouples, the casing for TP-08 was found to be damaged due to differential settlement beyond 45-feet, thus preventing the installation of the 100-foot, 125-foot, and 150-foot thermocouples. The 15-foot, 30-foot, and 45-foot thermocouples are active and reporting data.
 - The 45-foot thermocouple showed an increase in maximum temperature of 31°F from 136°F to 167°F from March 16th to March 17th and then a decrease in maximum temperature of 32°F from 167°F to 135°F from March 17th to March 18th.
- TP-17
 - The 30-foot thermocouple remained consistent with previous recorded temperatures.
- TP-23
 - TP-23 reported maximum values of 2508°F on February 25th, and was taken offline for pumping liquids from the probe casing prior to thermocouples being re-installed causing the single day erroneous readings.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no other sensors showed an anomaly, outlier, data gap, or malfunction, as discussed above. In the past week there was no other recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than 20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024 and October 4, 2024 adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024 response that was used as a basis for the LEA's October 4, 2024 letter.

We will continue to update the LEA weekly on the TMP readings and to notify the LEA by email within 48 hours of any recorded temperature change in the TMP field of greater than 20°F within 24 hours or less.

As of 3/19/2026 – Status of TMP Installation:

Chiquita diligently worked to install the additional temperature probes as part of the LEA's and related LEA correspondence. To accomplish this, Chiquita contracted with a sonic drill rig which was able to install the first additional temperature probes, 25, 26, 27, 28, 29, 30, 31, 32, 34, and 35. As soon as it became clear that the initial driller would be unable to install the TMPs timely and efficiently, Chiquita engaged an alternative driller that fully mobilized to the site on August 15th and began drilling the 7 remaining locations on August 18th.

The thermocouple manufacturer further delayed the shipment of the thermocouples for TP-22, TP-23, and TP-33. Chiquita utilized on-site thermocouples of different lengths to get TP-22, TP-23, and TP-33 online while waiting for the permanent thermocouples to arrive. As the permanent thermocouples were received on March 5, 2026, the swapping of the temporary thermocouples for the permanent thermocouples was completed for TP-22, TP-23, and TP-33 by March 16, 2026. This did not alter the depths readings at TP-22 or TP-23 as the temporary thermocouples were installed at the same depths of the permanent thermocouples. At TP-23, the permanent thermocouples allowed 1 additional thermocouple depth to be installed which will be reflected in next week's report.

Chiquita provided on September 26, 2025 a response to the LEA's August 6, 2025 letter and U.S. EPA's September 4, 2025 letter as well as an updated Temperature Monitoring Plan.

Thank you,

Dylan Smith

Solid Waste Borehole Maximum Temperature Profiles Over 6 Weeks for 2/5/2026 to 3/18/2026

From March 12, 2026, through March 18, 2026, there was one recorded temperature decrease and one recorded temperature increase that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
 - The 125-foot thermocouple went offline on March 3rd and TP-8 was offline between March 6th and March 9th for evaluation and maintenance. Upon removing the thermocouples, the casing for TP-08 was found to be damaged due to differential settlement beyond 45-feet, thus preventing the installation of the 100-foot, 125-foot, and 150-foot thermocouples. The 15-foot, 30-foot, and 45-foot thermocouples are active and reporting data.
 - The 45-foot thermocouple showed an increase in maximum temperature of 31°F from 136°F to 167°F from March 16th to March 17th and then a decrease in maximum temperature of 32°F from 167°F to 135°F from March 17th to March 18th.
- TP-17
 - The 30-foot thermocouple remained consistent with previous recorded temperatures.
- TP-23
 - TP-23 reported maximum values of 2508°F on February 25th, and was taken offline for pumping liquids from the probe casing prior to thermocouples being re-installed causing the single day erroneous readings.
