In accordance with the LEA's June 6, 2024 Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from April 2, 2026, through May 13, 2026, with a map of the maximum temperatures recorded in the past week and the below narrative on recorded temperature data. We included a separate map demonstrating the locations of the 40 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD.

From May 7, 2026, through May 13, 2026, there were three recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
 - The 125-foot thermocouple went offline on March 3rd and TP-8 was offline between March 6th and March 9th for evaluation and maintenance. Upon removing the thermocouples, the casing for TP-08 was found to be damaged due to differential settlement beyond 45-feet, thus preventing the installation of the 100-foot, 125-foot, and 150-foot thermocouples. The 15-foot, 30-foot, and 45-foot thermocouples are active and reporting data.
 - The 15-foot thermocouple showed a decrease in maximum temperature of 19°F from 156°F to 137°F from May 7th to May 13th.
 - The 30-foot thermocouple showed a decrease in maximum temperature of 35°F from 175°F to 140°F from May 7th to May 13th.
 - The 45-foot thermocouple showed a decrease in maximum temperature of 36°F from 177°F to 141°F from May 7th to May 13th.
- TP-14
 - The 150-foot thermocouple showed a single hour anomalous temperature increase on May 10th.
 - The reported maximum temperature reading of 2508°F is considered anomalous and is believed to be associated with a potential thermocouple sensor malfunction. The sensor remains under evaluation and investigation.
- TP-23
 - The 15-foot thermocouple remained consistent with previous recorded temperatures.

- The reported maximum temperature reading of 2508°F is considered anomalous and is believed to be associated with a potential thermocouple sensor malfunction. The sensor remains under evaluation and investigation.
- TP-36
 - The 250-foot thermocouple was evaluated due to low temperatures on April 6th and wiring that had come loose was corrected. After fixing the wiring issues, temperatures returned to 136°F as previously recorded prior to March 21st.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no other sensors showed an anomaly, outlier, data gap, or malfunction, as discussed above. In the past week there was no other recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than 20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024 and October 4, 2024 adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024 response that was used as a basis for the LEA's October 4, 2024 letter.

We will continue to update the LEA weekly on the TMP readings and to notify the LEA by email within 48 hours of any recorded temperature change in the TMP field of greater than 20°F within 24 hours or less.

We also included a temperature contour map showing the maximum observed temperatures collected during the month of April, in accordance with milestone 1B-3 of the LEA's June 6, 2024 Compliance Order.

Chiquita has received the LEA's March 19, 2026 comment letter and related April 7, 2026 correspondence on Chiquita's TMP final completion report and will provide a response.
