Subject: RE: Revised Monthly Determination on Reaction Mitigation Area Boundary - Chiquita Canyon Landfill
Attachments: 2026-07-16 Re_ Chiquita Canyon Landfill - TMP Temperature Submittal.pdf

[EXTERNAL SENDER: Use caution with links/attachments]

Chris:

As you are aware, from September 2023 to May 2026, the Reaction Committee prepared a monthly delineation of the “Reaction Area” boundary in accordance with Condition Nos. 9a and 9b of the SOFA as it existed at that time. On June 3, the modifications to the SOFA included substantial changes to Condition 9b that introduced the new concept of a “Reaction Mitigation Area” and restructured the approach and methodology for these monthly delineations. These changes yielded a more objective and formulaic process. We review and analyze certain data recorded during each month and compare the measured values to the established seven criteria, conduct follow-up confirmatory sampling and analysis as applicable, and thereby determine whether a particular surface grid is to be included or excluded within the “Reaction Mitigation Area Boundary”.

Accordingly, several considerations in response to your comments and requests are noted below. If helpful, we are available to schedule a call with you and others at AQMD, or to join a part of one of the biweekly calls, to discuss the new language in Condition 9b and our understanding of how this monthly determination exercise is to be executed based on our negotiations and discussions regarding this new language with AQMD.

Response to Comment #1:

The July report considered measurements recorded during the month of June and excluded Grid No. 41 from the Reaction Mitigation Area boundary because the June data demonstrated that the grid exhibited only two of the seven criteria, specifically Well CV-2011A exhibited poor LFG and hydrogen concentration that exceeded the established threshold. The other two wells within this grid (CV-55R and CV-2527) did not conform to any of the criteria, and the grid did not otherwise exhibit other criteria, so it was excluded for the purposes of the July determination.

As noted above, under the revised methodology for these monthly determinations, the Reaction Committee simply reviews the data for that month against the seven established criteria and thereby determines whether a grid is to be included or excluded. As three criteria were not met within this grid based on the June data, no subsequent monitoring to further assess the circumstances was required. Under the revised formulaic approach to Condition 9b, no explanation of individual well operational conditions, such as position of the wellhead control valve, installation or removal of a dewatering pump, etc., is required, and as such Chiquita does not include such explanation in the monthly reports.

Further, Chiquita's understanding of the language is that Condition 9b does not obligate the Facility to measure and record hydrogen and carbon monoxide at each individual LFG well on a monthly basis if such data is not already measured. Chiquita specifically added language to criteria 4 and 5 in Condition 9b clarifying that such data only needed to be considered "to the extent measured". As Chiquita explained to the District, this additional language was intended to clarify and reflect how the Reaction Committee has conducted these evaluations since October 2023. AQMD accepted this additional language and explanation. If a parameter (such as hydrogen) is not measured at an individual well during a particular month, then the criteria correlating to that parameter is obsolete for consideration during that month.

As such, the condition does not require that the most recent past value from some previous month be retained and applied as relevant and applicable for all subsequent months until it is "overwritten" by a more current measurement. We have never conducted our evaluations employing this approach, and this would be inconsistent with presenting a current view of the Reaction Mitigation Area. Accordingly, the hydrogen value measured at CV-55R in May was considered when evaluating May data, but not in the monthly determinations since. Since there was no measurement of hydrogen at CV-55R in June, the well did not trigger that particular criterion for the June analysis. Future monthly exercises will consider hydrogen concentrations at CV-55R for comparison against the threshold if measurements are obtained within that month.

Response to Comment #2:

Upon further review of the wellhead monitoring data at the three LFG extraction wells (CV-56, CV-1701, and CV-24118) positioned within Grid No. 38, each of these wells exhibited methane concentrations below 30 percent and methane-to-carbon dioxide ratios less than 1.0 during June monitoring. Accordingly, they conform to the poor gas quality criterion and, as a non-contiguous grid, Condition 9b required field testing to measure hydrogen and carbon monoxide at the three wells. This was not performed prior to submittal of the July determination report; however, Chiquita has put additional procedures in place to minimize the potential of this happening again. Further, we are conducting confirmatory field testing on this grid for the purposes of the August report on the July data and will include this grid in the Reaction Mitigation Area if the confirmatory testing and analysis meet the required thresholds.

Response to Comment #3:

Temperature monitoring probe TP-25 is positioned within Grid No. 148. Because the June data within this grid triggered greater than three of the criteria, this grid was included in the Reaction Mitigation Area for the July report. Under the language of Condition 9b and this new objective formulaic approach, Chiquita believes no further discussion or explanation is warranted for the monthly boundary determination exercise. If you are interested in the circumstances of TP-25, I have attached a recent weekly TMP submittal that presents commentary on the conditions at this probe for your reference. As noted therein, the probe is being removed and inspected to assess for potential issues. These weekly submittals are also made available on Chiquita's website.

Response to Comment #4:

We confirm that Attachments A, C, D, E, and F depict data based exclusively on measured values recorded during the applicable month only. As explained under Response #1 above, Chiquita does not believe it is required, or appropriate, to retain past month's data as relevant and applicable to subsequent monthly determinations. So, if no data is generated for a particular parameter in any given

month, there is no evaluation of past data as a “surrogate”. This is consistent with how we have created these maps in all prior evaluations.

As noted above, if helpful, we are available to meet with you to discuss Chiquita’s understanding of the SOFA language and the methodology being employed for these analyses. Please contact me if you have any questions or require additional information.

Thanks, Bob D.

Subject: RE: Revised Monthly Determination on Reaction Mitigation Area Boundary - Chiquita Canyon Landfill

This email originated from outside of SCS Engineers. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good afternoon Bob,

Thank you very much for sharing the June and July Reaction Area Determination Reports (emailed June 11, 2026 and July 10, 2026) and the subsequent Revised Reaction Area Determination Reports (emailed July 7, 2026 and July 15, 2026). After reviewing the revised reports, we have various follow-up questions:

- Grid 41 was included in the June report, with two wells (CV-2011A, CV-55R) showing poor gas quality and elevated H₂, but was excluded in the July report. The July report indicates CV-2011A continues to exceed the same gas quality and H₂ parameters, but CV-55R no longer has any issues. The July report does not provide any further detail on subsequent data gathered relating to this grid, resulting in the exclusion of the grid. The report does not explain whether well(s) were closed/abandoned, if subsequent data was collected, the details of the collected data, etc. Please provide these additional details and supporting data for the exclusion of Grid 41 in the July report.
 - o Please note that per the data we see in SCS eTools, the latest H₂ data for well CV-55R was collected in May, and shows exceedance of the H₂ concentration parameter, inconsistent with what is indicated in the Attachment A map for July’s report.
- Grid 38 is a non-contiguous grid, and has had with three non-temperature parameters present in the June and July reports. There was no discussion on Grid 38 in the July report, no indication that the facility initiated the required CO and H₂ field testing and subsequent laboratory sampling/analysis for the wells in the grid, and no associated data provided. Please provide these additional details and supporting data for Grid 38 in the July report.
- The latest data for TP-25 shows ~90 degree Fahrenheit increases in temperature at various depths. There was no mention or discussion of this probe in the provided report. Please provide additional information on the landfill’s understanding of what is occurring at this probe location.
- For generation of the Attachment A Reaction Mitigation Area Map, and Attachments D, E, and F Range Maps, can you confirm that latest available parameter data (such as from prior months) is used for the wells, if there is no data generated for a parameter during the month being evaluated? Our review of the

Attachment E Hydrogen Range Map appears to only include data generated during June, and does not consider the latest available data if the latest data is prior to June (such as for CV-55R mentioned above).

Please provide your response by **July 30, 2026**.

Thank you,
Chris

Subject: [EXTERNAL] Revised Monthly Determination on Reaction Mitigation Area Boundary - Chiquita Canyon Landfill

Mr. Chen:

In accordance with Condition Nos. 9(a) and 9(b) of the Modified Stipulated Order for Abatement (SOFA) pertaining to the Chiquita Canyon Landfill (Landfill or Facility) (Case No. 6177-4), as last modified on June 3, 2026, SCS Engineers (SCS), on behalf of Chiquita Canyon, LLC (Chiquita), has prepared this revised data-determined Reaction Mitigation Area boundary determination for June 2026.

This revised Reaction Mitigation Area boundary determination has been developed to incorporate the temperature monitoring probe data in Attachment B that was excluded due to a technical issue and is intended to supersede the boundary determination that was submitted on July 10, 2026.

Also, the programming to generate the graphical temperature profile exhibits presented in Attachment B has been modified since the submittal of the May 2026 data to more accurately reflect the initial 4-week measurements that coincide with the date of activation for each probe. Accordingly, a slight adjustment in the dates correlating to the initial 4-week values has been accomplished.

Please let us know if you have any questions.

Thanks, Bob D.

Subject: Re: Chiquita Canyon Landfill - TMP Temperature Submittal
Attachments: Borehole Profiles Six Weeks Maximum 7-16-2026.pdf; Daily Maximum Temp Boreholes Report- 7-16-26.xlsx

In accordance with the LEA's June 6, 2024 Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from June 4, 2026, through July 15, 2026, with a map of the maximum temperatures recorded in the past week and the below narrative on recorded temperature data. We included a separate map demonstrating the locations of the 40 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD.

From July 9, 2026, through July 15, 2026, there were seven recorded temperature increases and eight recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
 - o The 15-foot thermocouple showed a decrease in maximum temperature of 15°F from 148°F to 133°F from July 7th to July 14th.
 - o The 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 169°F to 158°F from July 12th to July 13th.
 - o The 45-foot thermocouple showed a decrease in maximum temperature of 21°F from 178°F to 157°F from July 12th to July 13th, then an increase in maximum temperature of 12°F from 157°F to 168°F from July 13th to July 14th.
- TP-10
 - o The 45-foot thermocouple showed an increase in maximum temperature of 11°F from 131°F to 142°F from July 9th to July 15th
- TP-15

- o The 30-foot thermocouple remained consistent with previous recorded temperatures.
- o The 45-foot thermocouple showed a decrease in maximum temperature of 12°F from 191°F to 179°F from July 9th to July 14th.
- TP-23
 - o The 15-foot thermocouple showed an increase in maximum temperature of 25°F from 192°F to 217°F from July 9th to July 10th, then a decrease in maximum temperature of 18°F from 217°F to 195°F from July 10th to July 15th.
- TP-24
 - o The 155-foot thermocouple showed an increase in maximum temperature of 19°F from 167°F to 186°F from July 14th to July 15th.
 - o The 210-foot thermocouple showed a decrease in maximum temperature of 12°F from 202°F to 189°F from July 8th to July 12th, then an increase in maximum temperature of 17°F from 189°F to 206°F from July 11th to July 15th.
- TP-25
 - o The 15-foot thermocouple recorded an increase in maximum temperature of 96°F from 114°F to 210°F from July 9th to July 10th. This temperature increase may have resulted from additional pumping at nearby wells, which increased gas movement and extraction in the area. The probe will be removed and evaluated to determine whether any failure or other issue with the probe may have contributed to the elevated reading.
 - o The 30-foot thermocouple remained consistent with previous recorded temperatures.
 - o The 45-foot thermocouple remained consistent with previous recorded temperatures.
 - o The 60-foot thermocouple remained consistent with previous recorded temperatures.
 - o The 75-foot thermocouple remained consistent with previous recorded temperatures.
 - o The 90-foot thermocouple remained consistent with previous recorded temperatures.
 - o The 110-foot thermocouple showed a decrease in maximum temperature of 10°F from 220°F to 210°F from July 14th to July 15th.
 - o The 130-foot thermocouple showed an increase in maximum temperature of 21°F from 217°F to 238°F from July 2nd to July 14th, then a decrease in maximum temperature of 20°F from 238°F to 218°F from July 14th to July 15th.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

This report includes recorded temperature increases of greater than 20°F within 24 hours or less, as detailed above, that require a 48-hour notification due to a temperature change.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no other sensors showed an anomaly, outlier, data gap, or malfunction, as discussed above. In the past week there were no other recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than 20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024, and October 4, 2024 adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024 response that was used as a basis for the LEA's October 4, 2024 letter.

We will continue to update the LEA on the TMP readings.

SCS ENGINEERS

07224053.00 | July 16, 2026

274 Granite Run Drive
Lancaster, PA 17601
717-550-6330

From July 9, 2026, through July 15, 2026, there were seven recorded temperature increases and eight recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
 - The 15-foot thermocouple showed a decrease in maximum temperature of 15°F from 148°F to 133°F from July 7th to July 14th.
 - The 30-foot thermocouple showed a decrease in maximum temperature of 11°F from 169°F to 158°F from July 12th to July 13th.
 - The 45-foot thermocouple showed a decrease in maximum temperature of 21°F from 178°F to 157°F from July 12th to July 13th, then an increase in maximum temperature of 12°F from 157°F to 168°F from July 13th to July 14th.
- TP-10
 - The 45-foot thermocouple showed an increase in maximum temperature of 11°F from 131°F to 142°F from July 9th to July 15th
- TP-15
 - The 30-foot thermocouple remained consistent with previous recorded temperatures.
 - The 45-foot thermocouple showed a decrease in maximum temperature of 12°F from 191°F to 179°F from July 9th to July 14th.
- TP-23
 - The 15-foot thermocouple showed an increase in maximum temperature of 25°F from 192°F to 217°F from July 9th to July 10th, then a decrease in maximum temperature of 18°F from 217°F to 195°F from July 10th to July 15th.
- TP-24
 - The 155-foot thermocouple showed an increase in maximum temperature of 19°F from 167°F to 186°F from July 14th to July 15th.
 - The 210-foot thermocouple showed a decrease in maximum temperature of 12°F from 202°F to 189°F from July 8th to July 12th, then an increase in maximum temperature of 17°F from 189°F to 206°F from July 11th to July 15th.
- TP-25
 - The 15-foot thermocouple recorded an increase in maximum temperature of 96°F from 114°F to 210°F from July 9th to July 10th. This temperature

increase may have resulted from additional pumping at nearby wells, which increased gas movement and extraction in the area. The probe will be removed and evaluated to determine whether any failure or other issue with the probe may have contributed to the elevated reading.

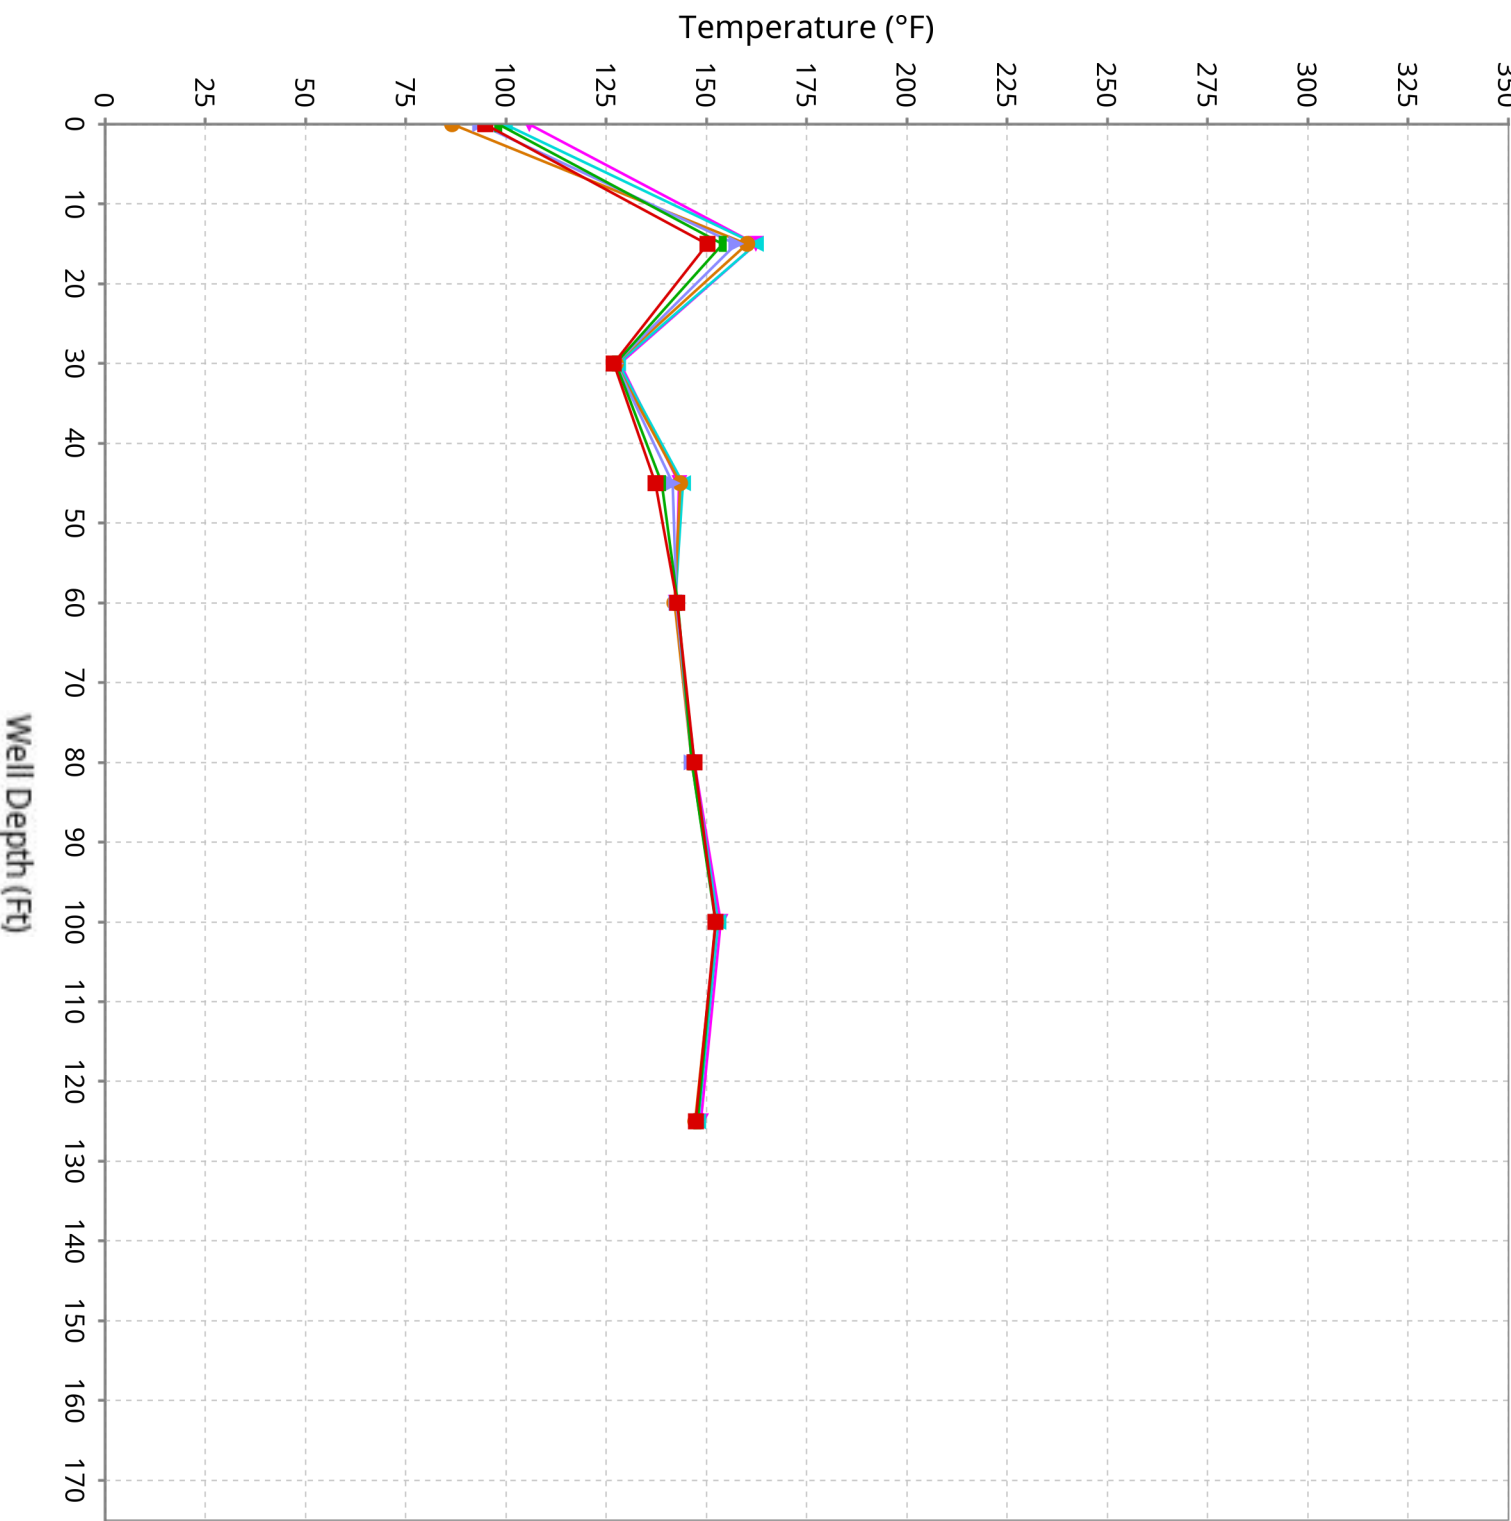

- The 30-foot thermocouple remained consistent with previous recorded temperatures.
- The 45-foot thermocouple remained consistent with previous recorded temperatures.
- The 60-foot thermocouple remained consistent with previous recorded temperatures.
- The 75-foot thermocouple remained consistent with previous recorded temperatures.
- The 90-foot thermocouple remained consistent with previous recorded temperatures.
- The 110-foot thermocouple showed a decrease in maximum temperature of 10°F from 220°F to 210°F from July 14th to July 15th.
- The 130-foot thermocouple showed an increase in maximum temperature of 21°F from 217°F to 238°F from July 2nd to July 14th, then a decrease in maximum temperature of 20°F from 238°F to 218°F from July 14th to July 15th.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

This report includes recorded temperature increases of greater than 20°F within 24 hours or less, as detailed above, that require a 48-hour notification due to a temperature change.

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-28

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

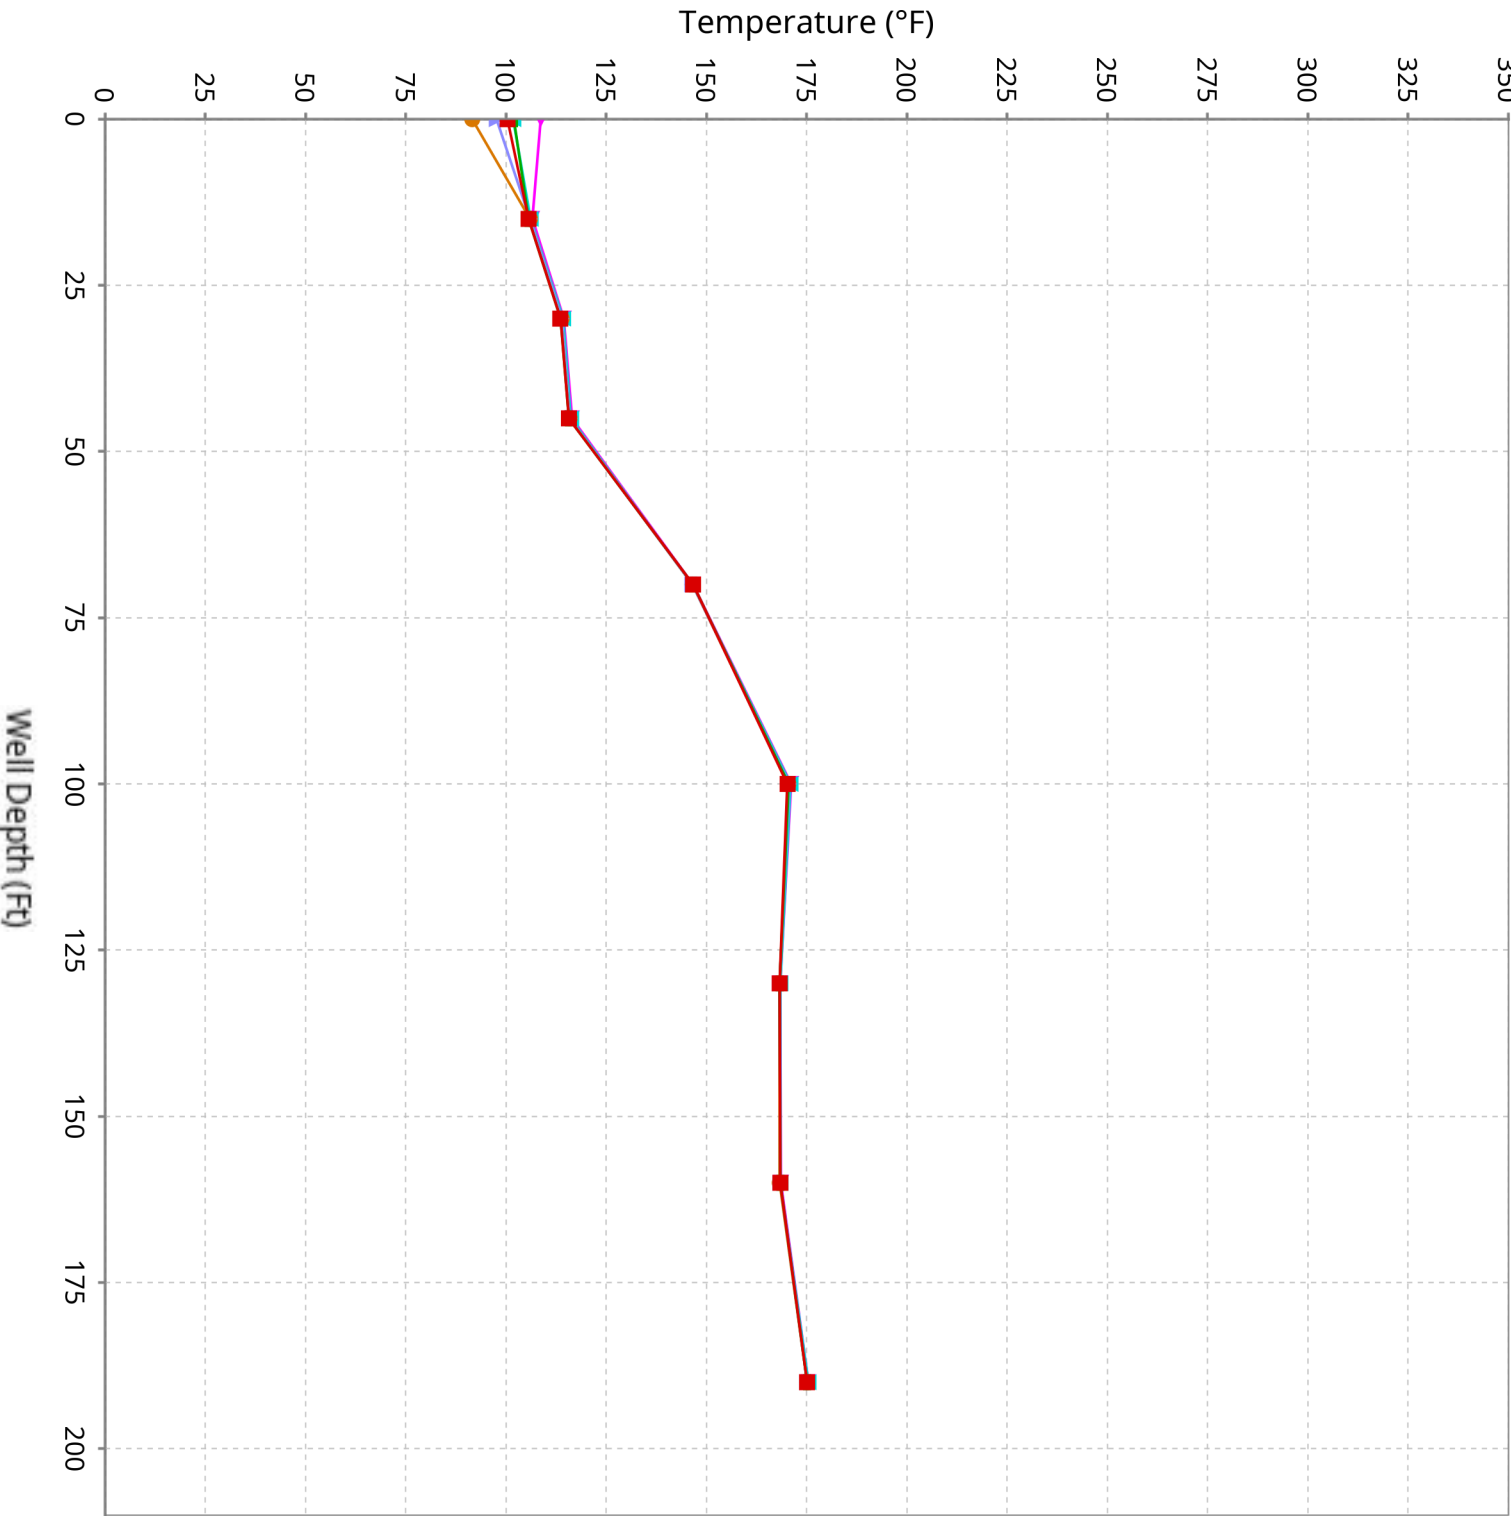

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-29

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

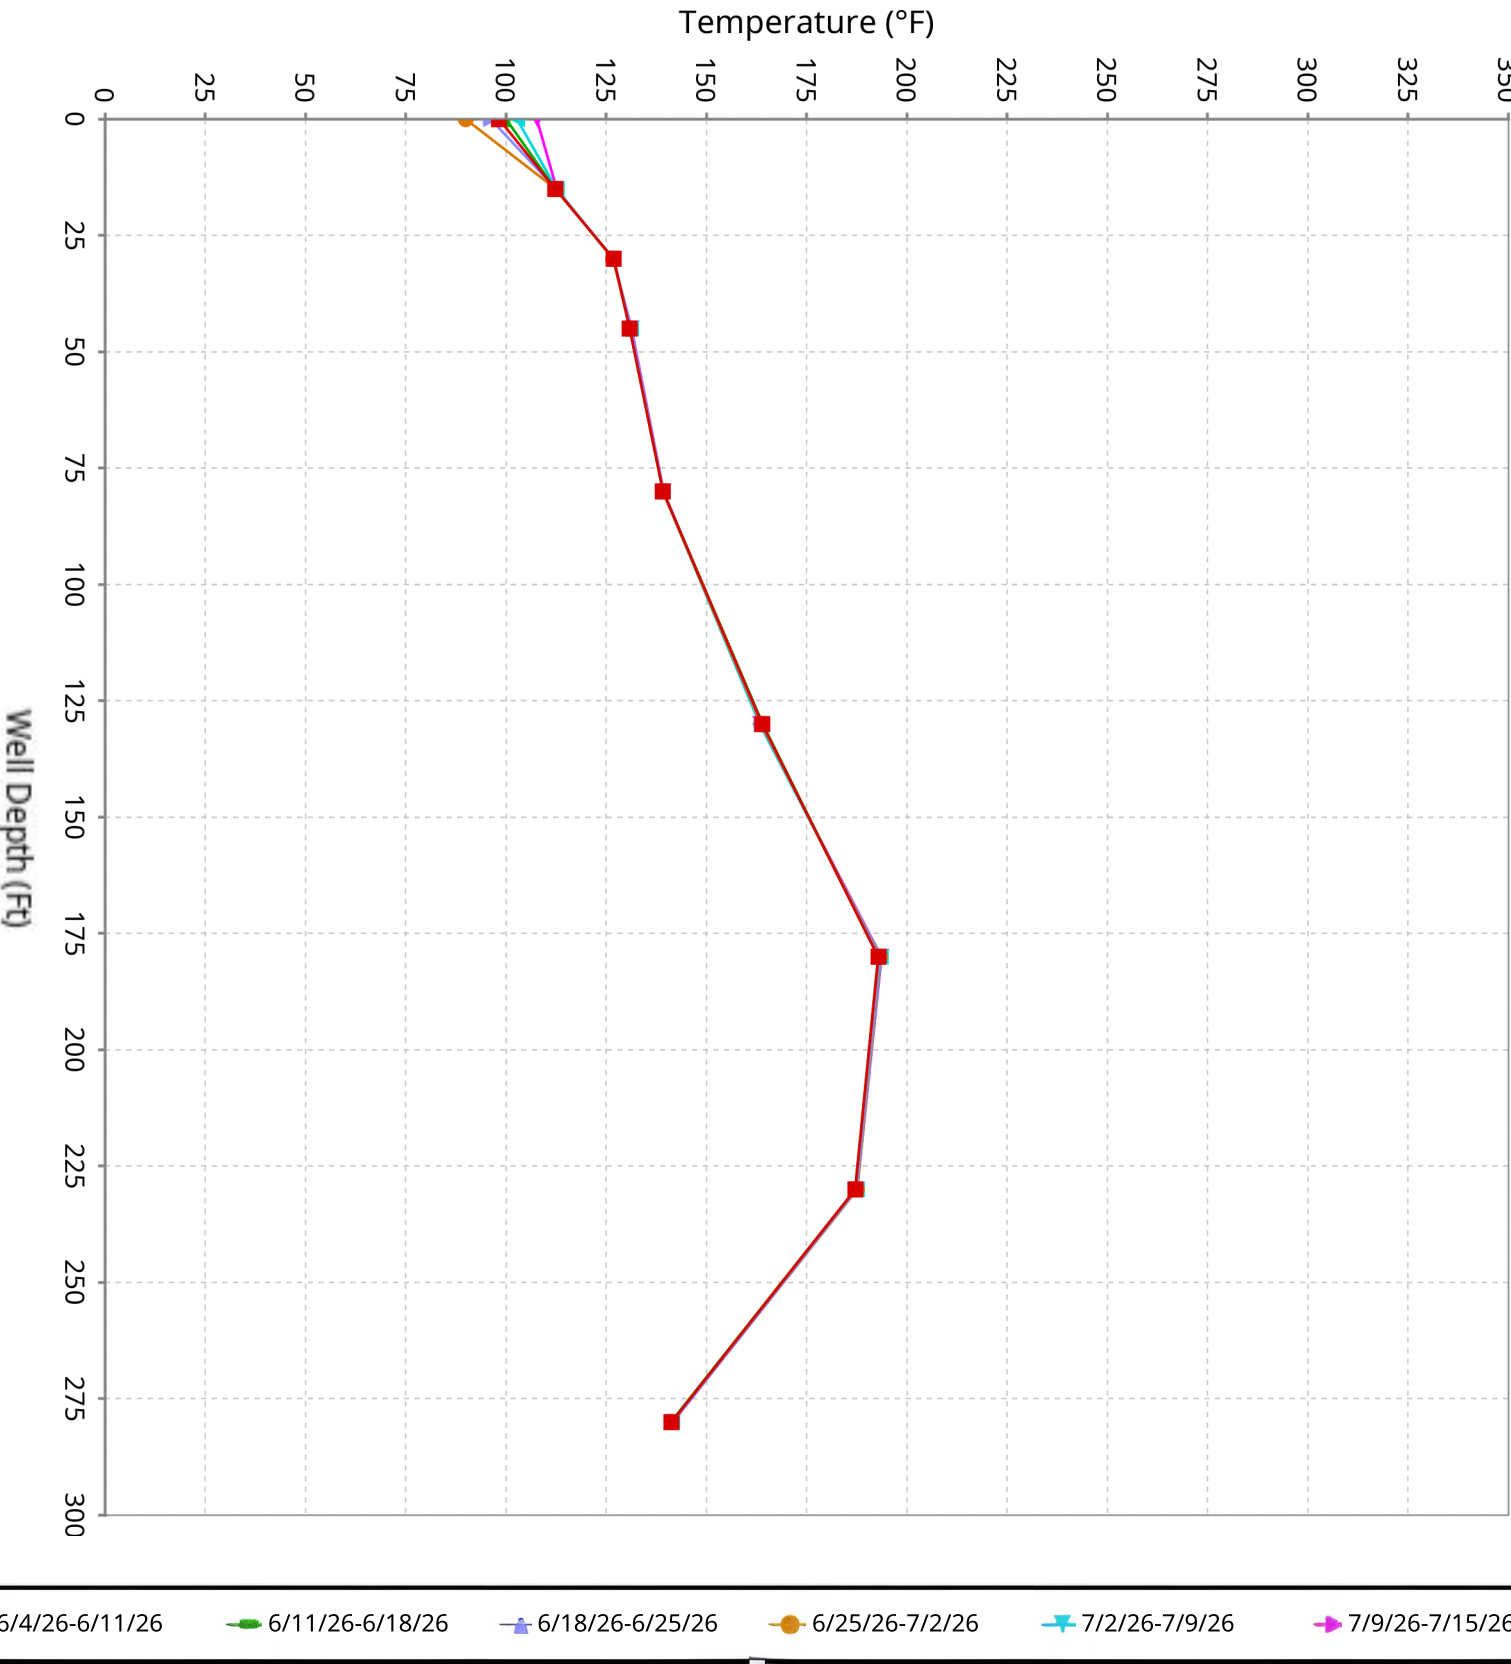

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill
for TP-30

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

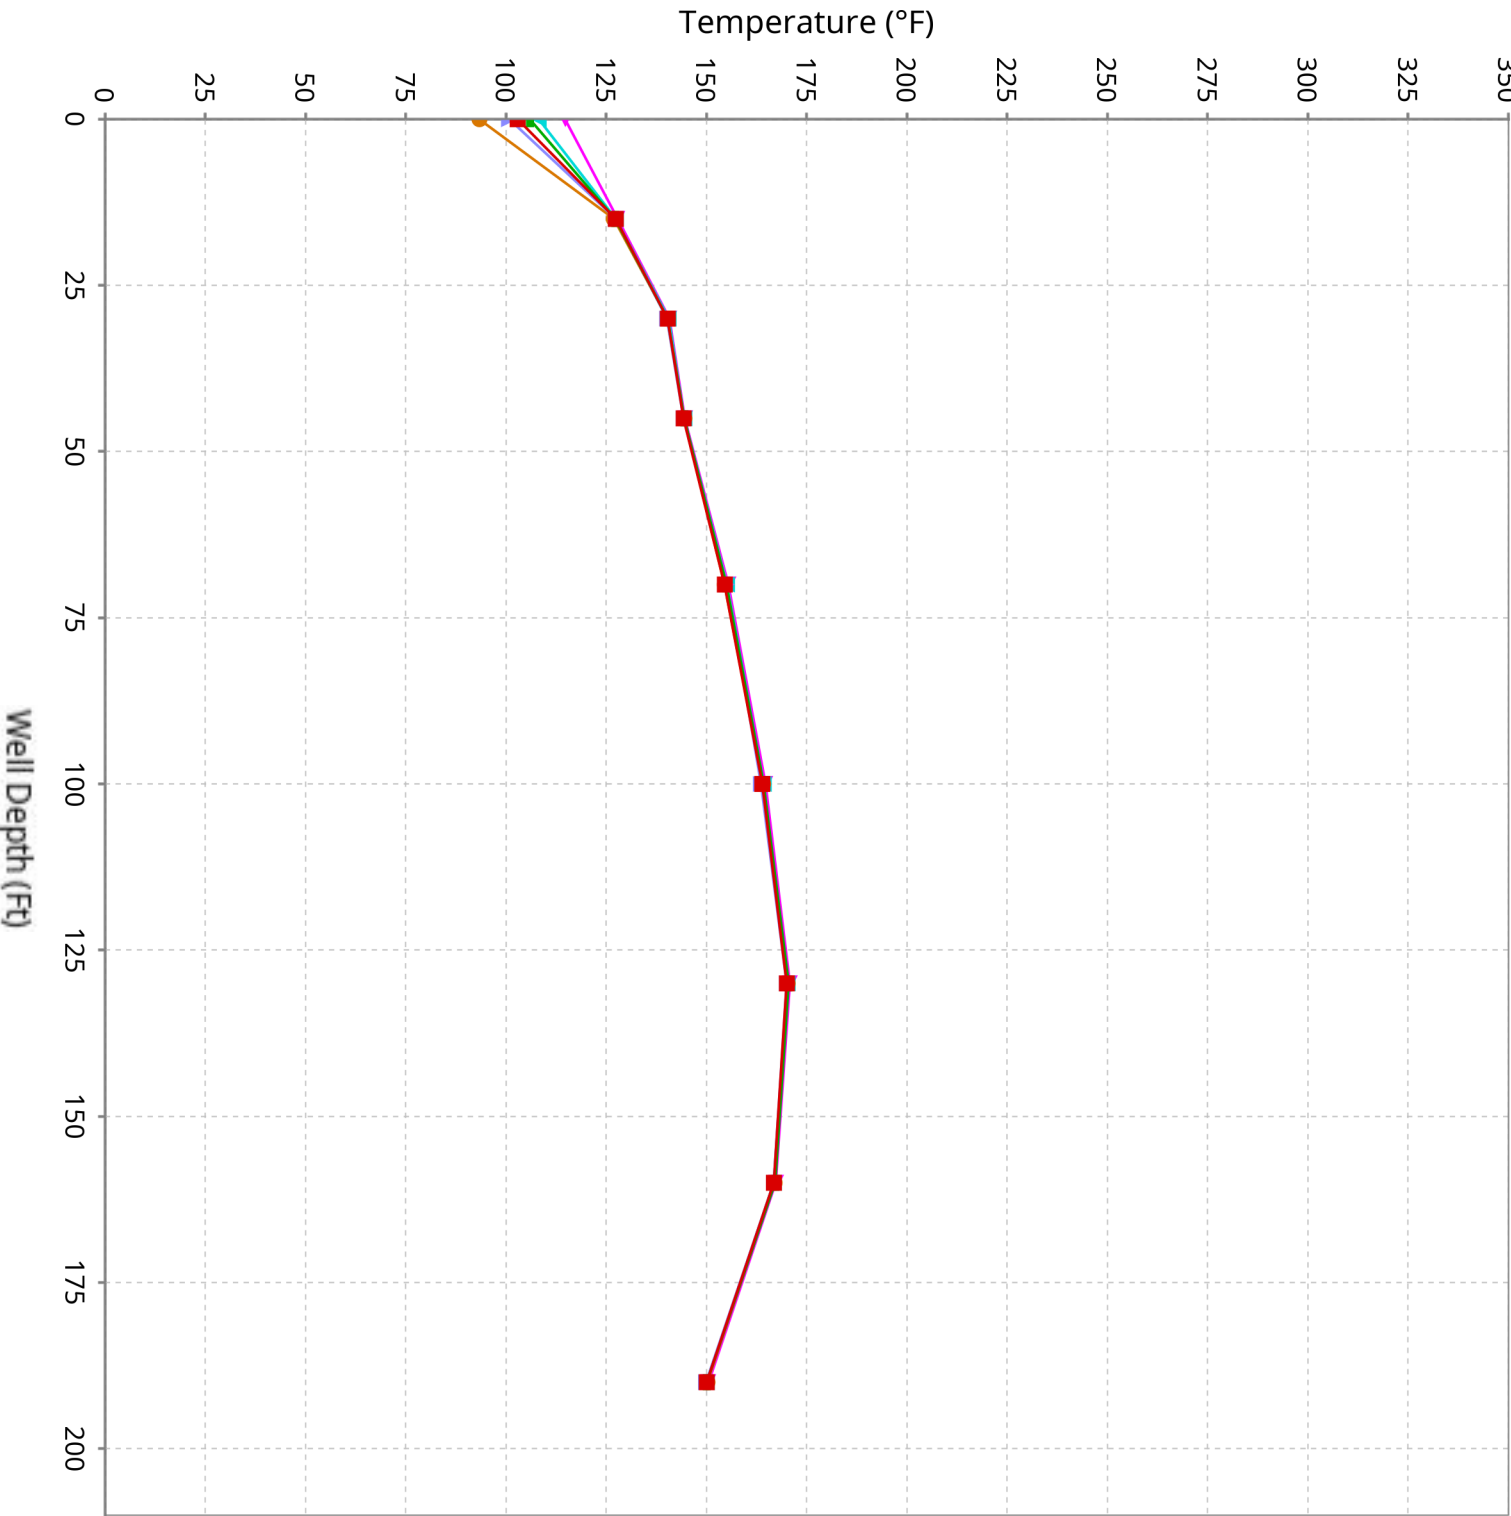

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-31

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

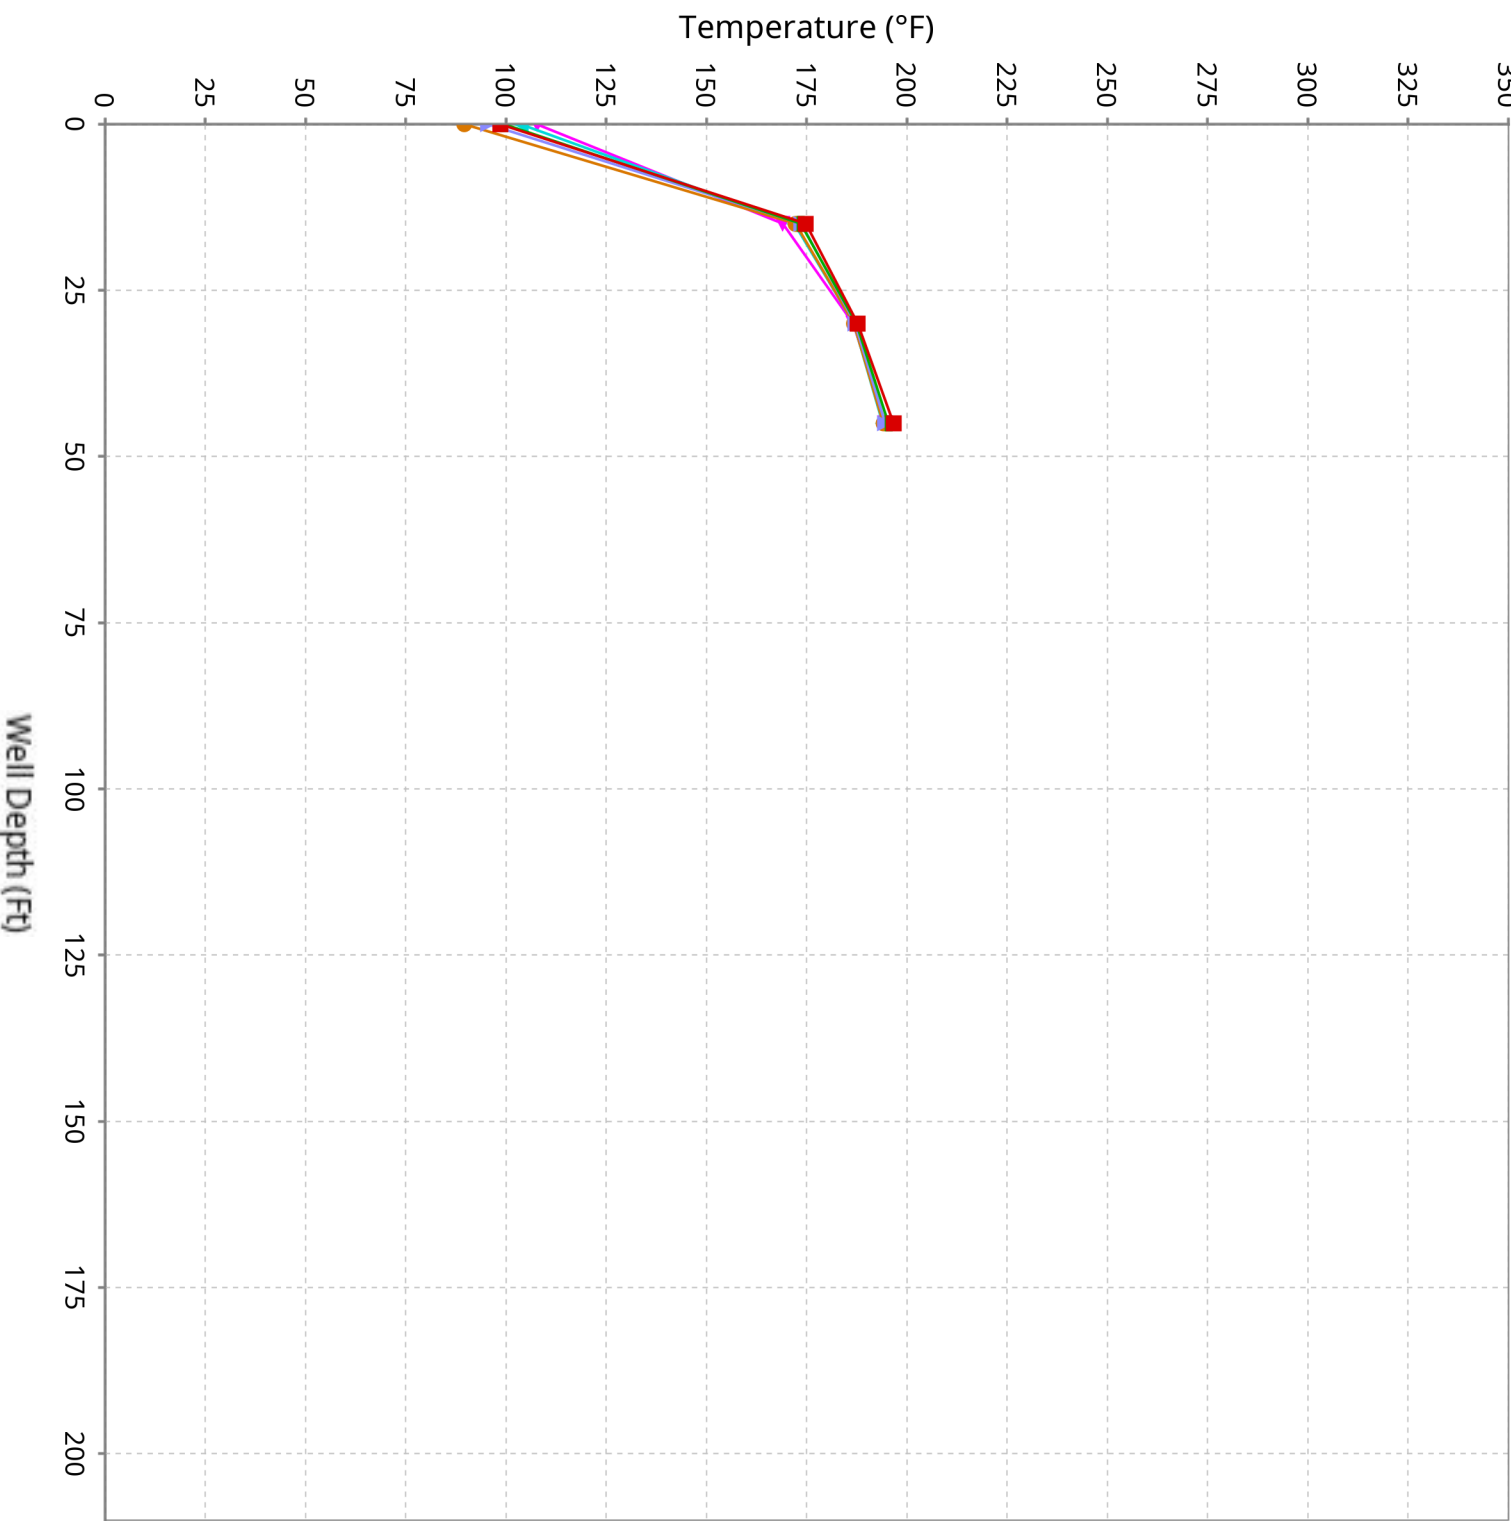

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-32

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-33

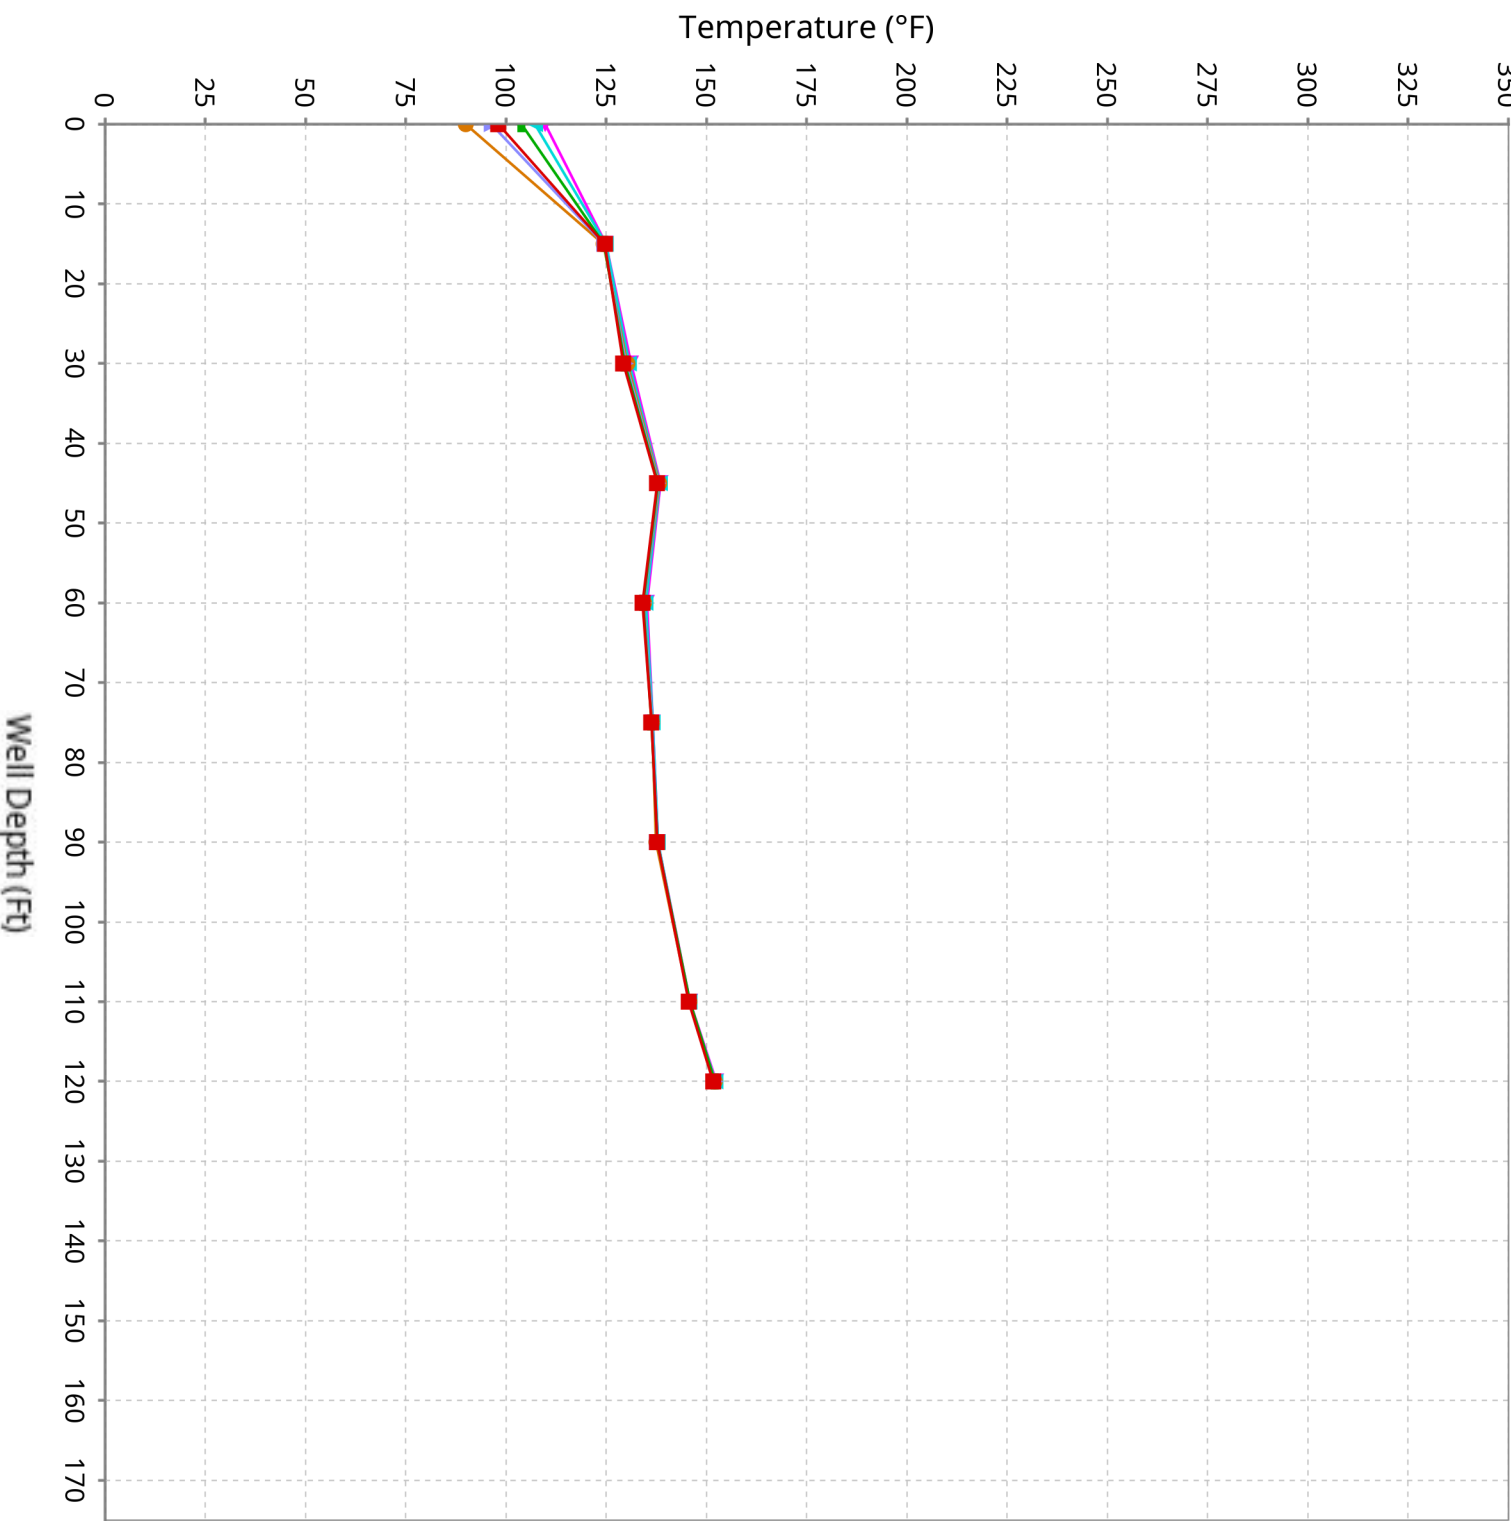

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

■ 6/4/26-6/11/26 ● 6/11/26-6/18/26 ▲ 6/18/26-6/25/26 ● 6/25/26-7/2/26 ◆ 7/2/26-7/9/26 ◆ 7/9/26-7/15/26

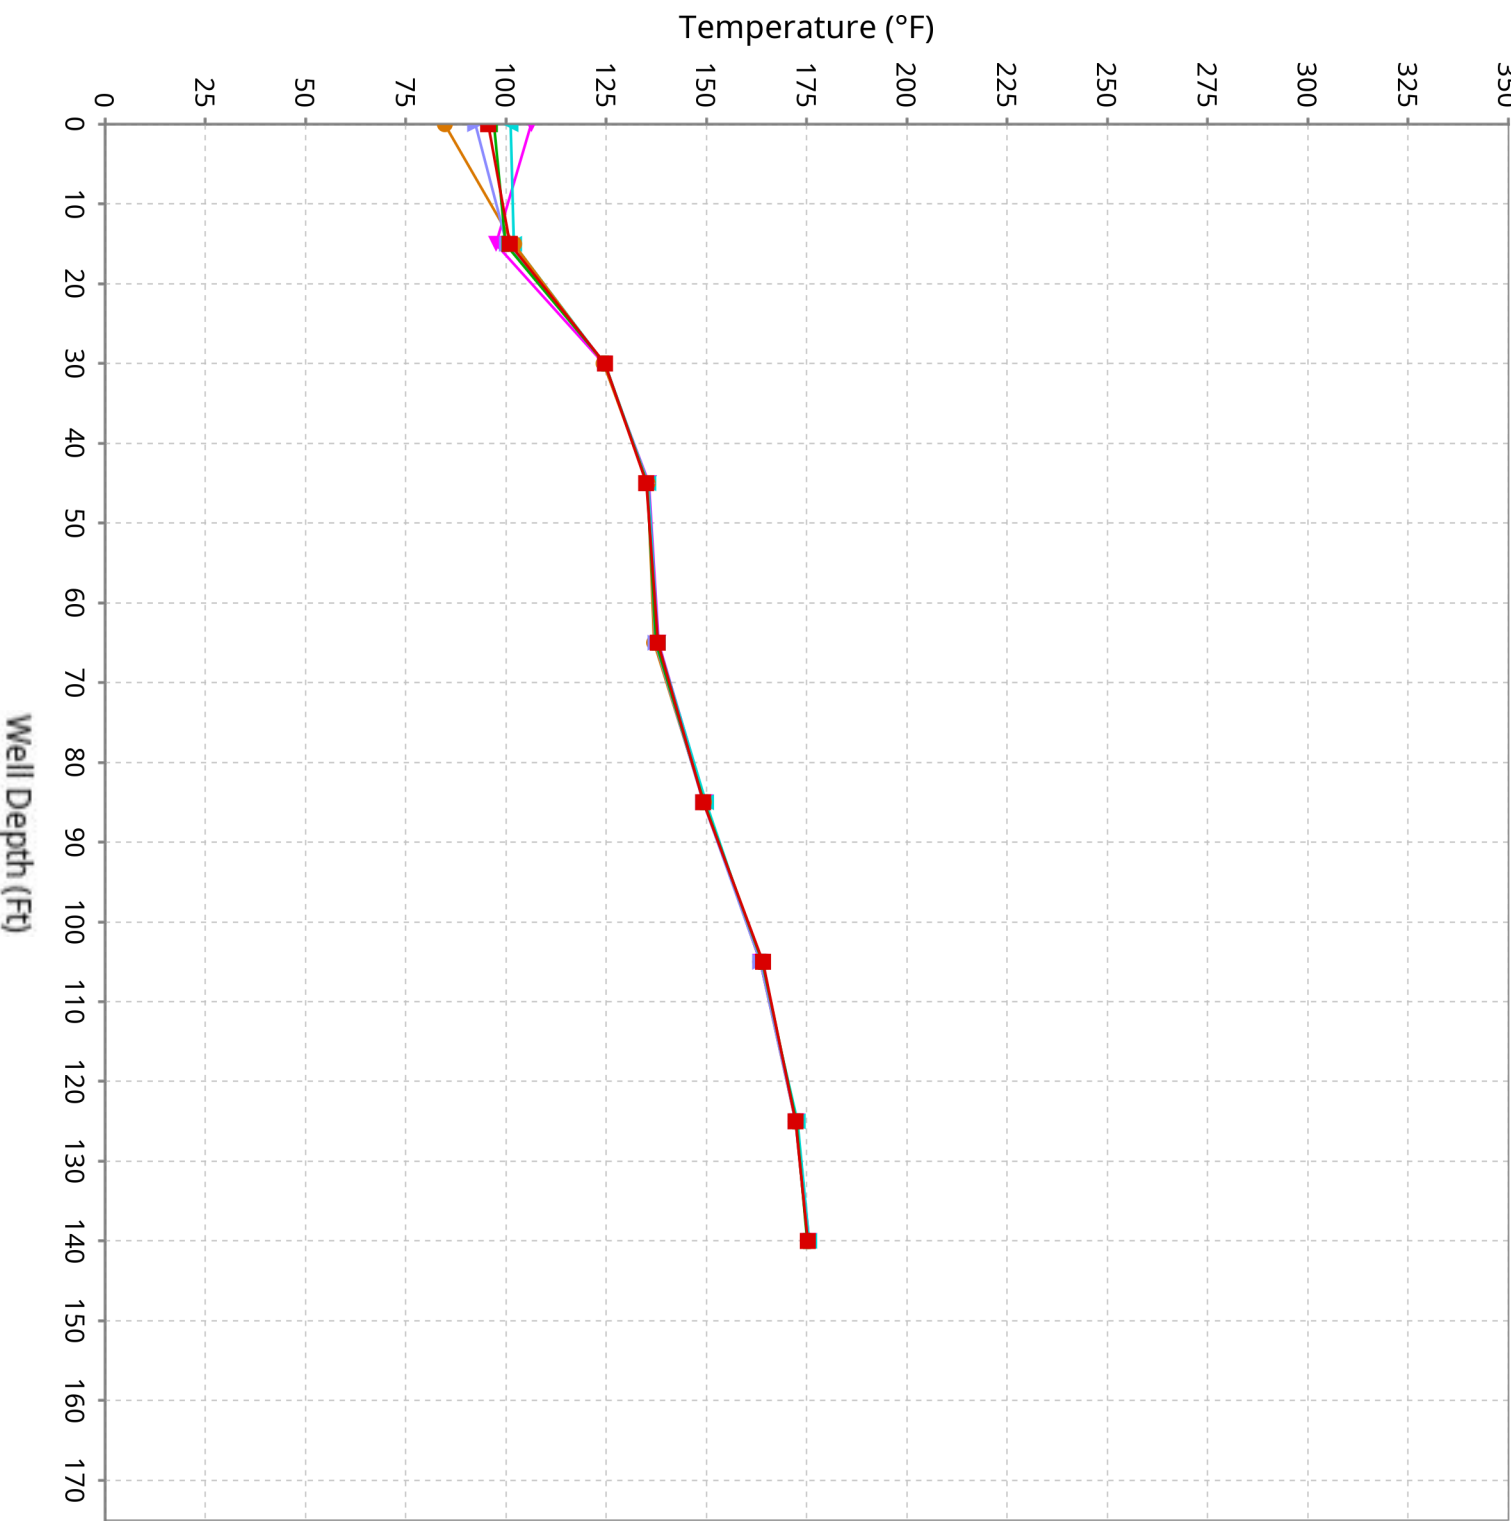

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-34

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

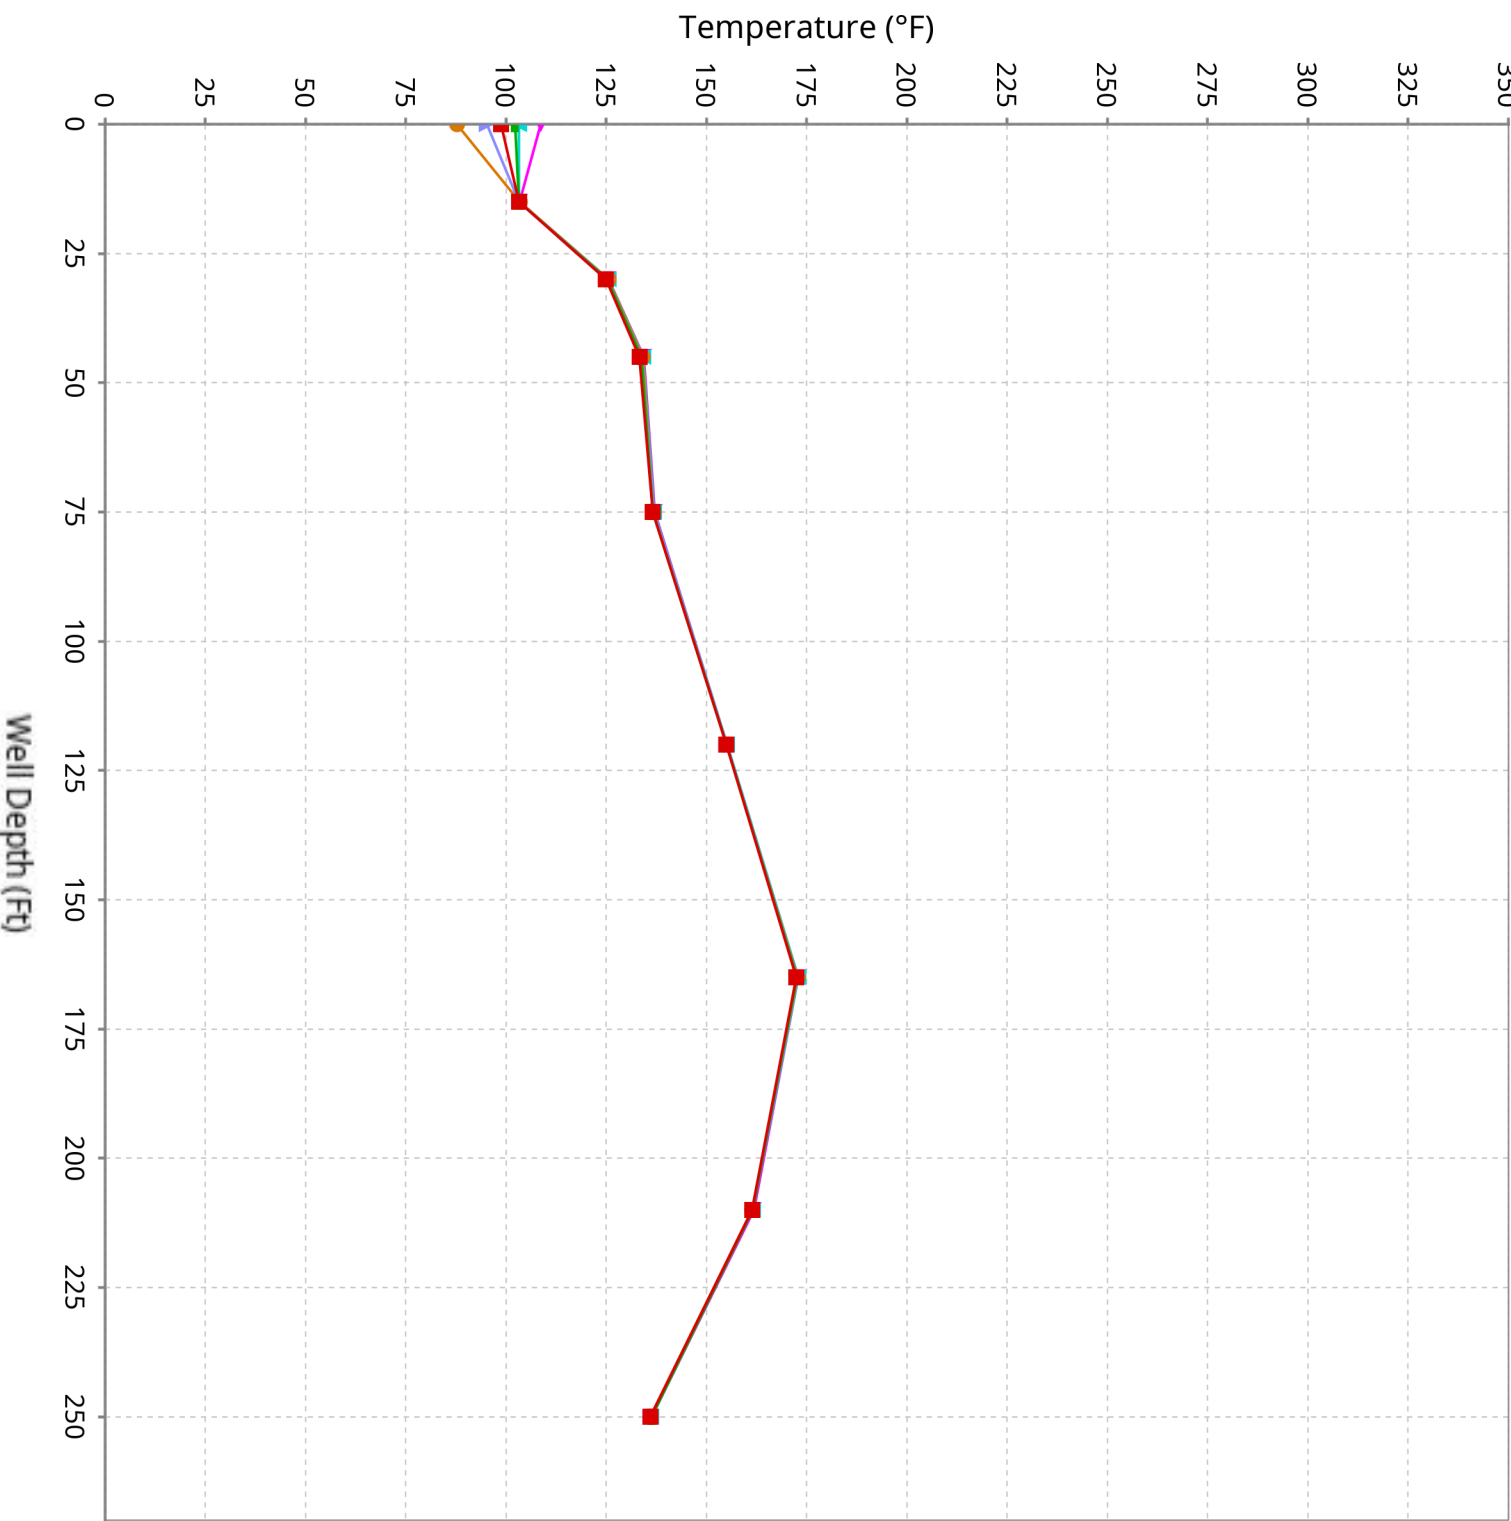

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-35

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

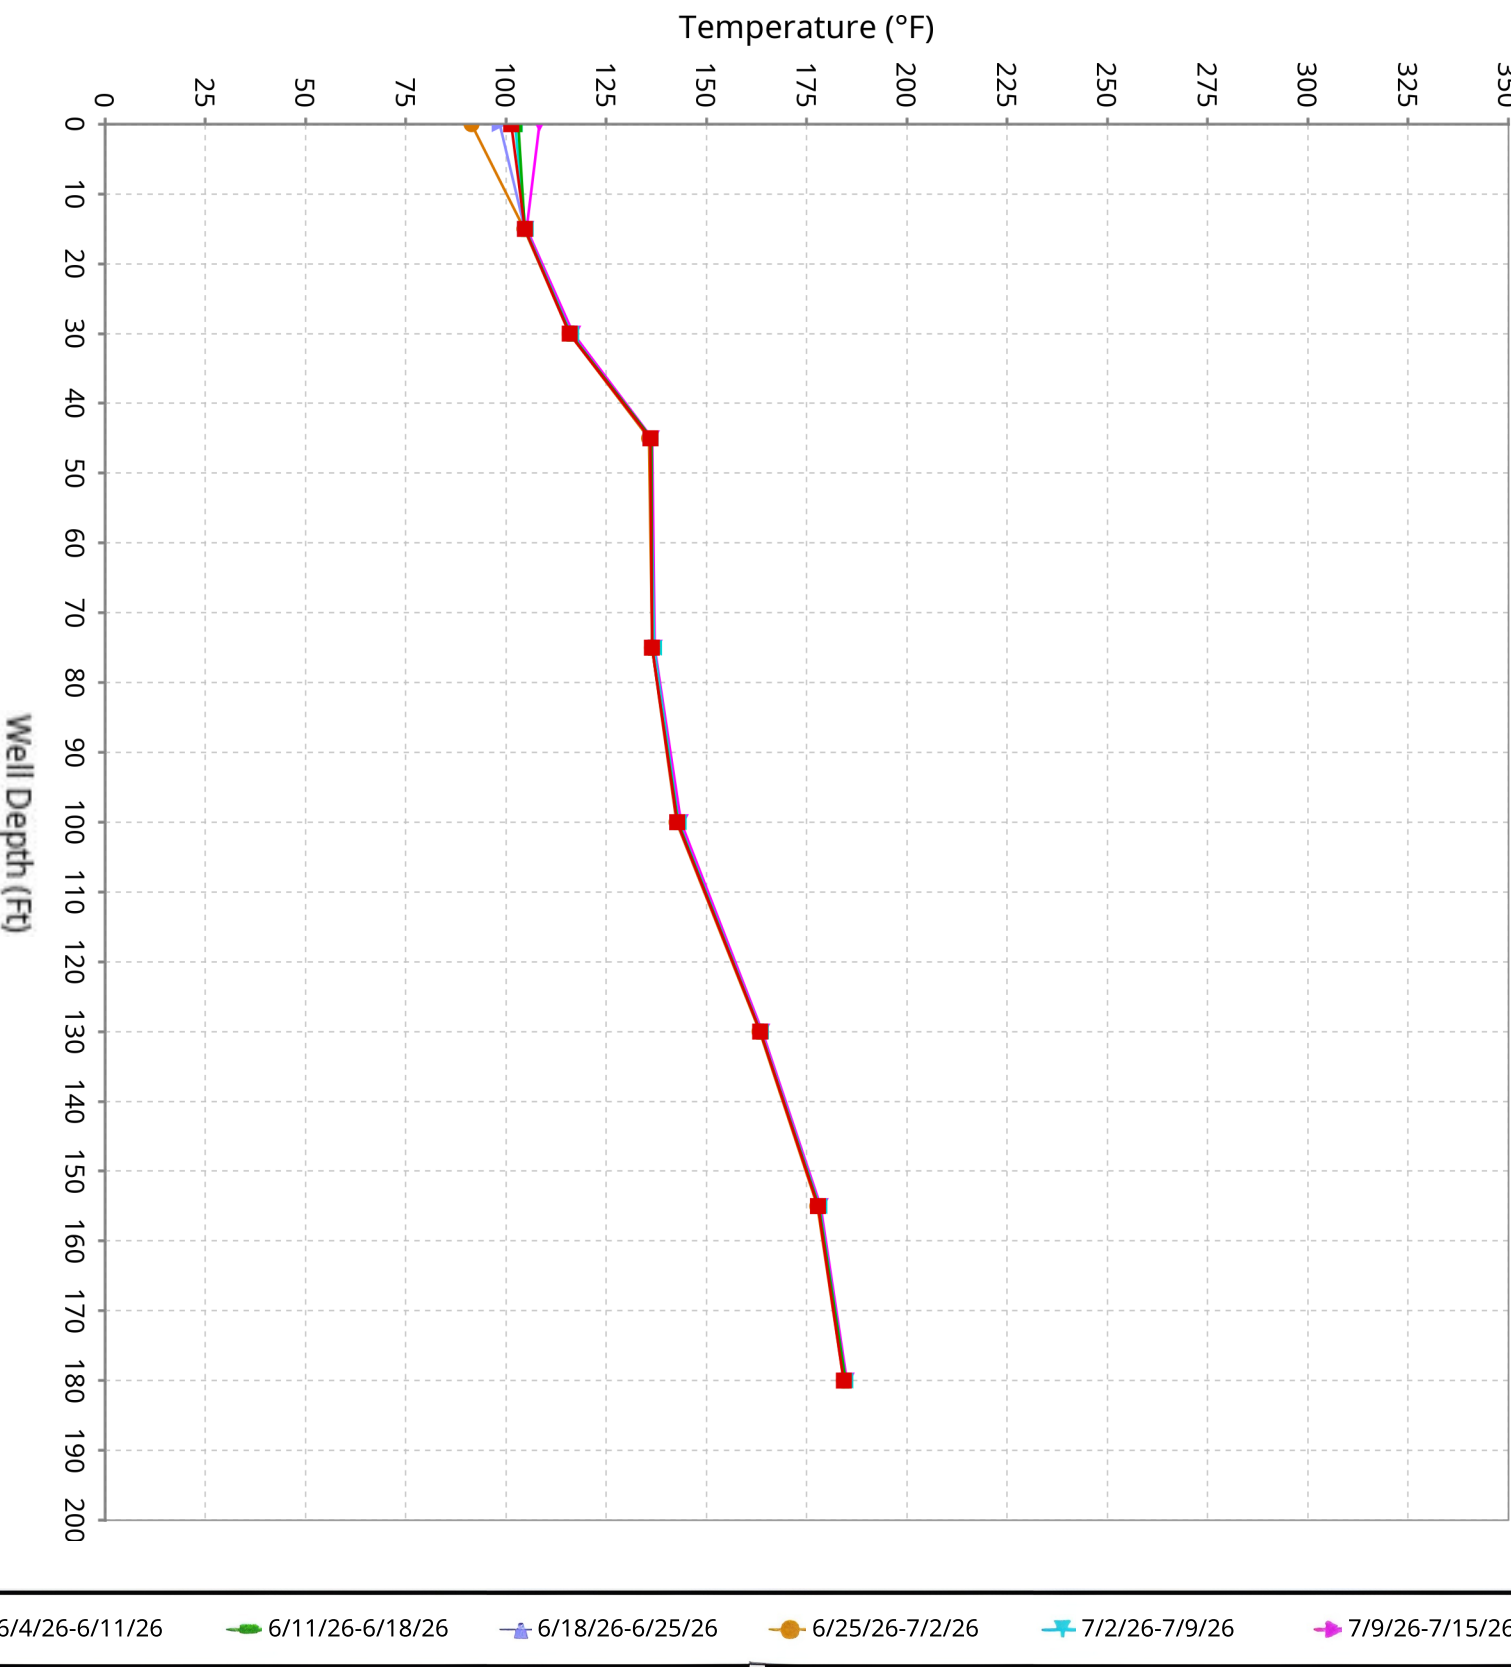

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-36

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

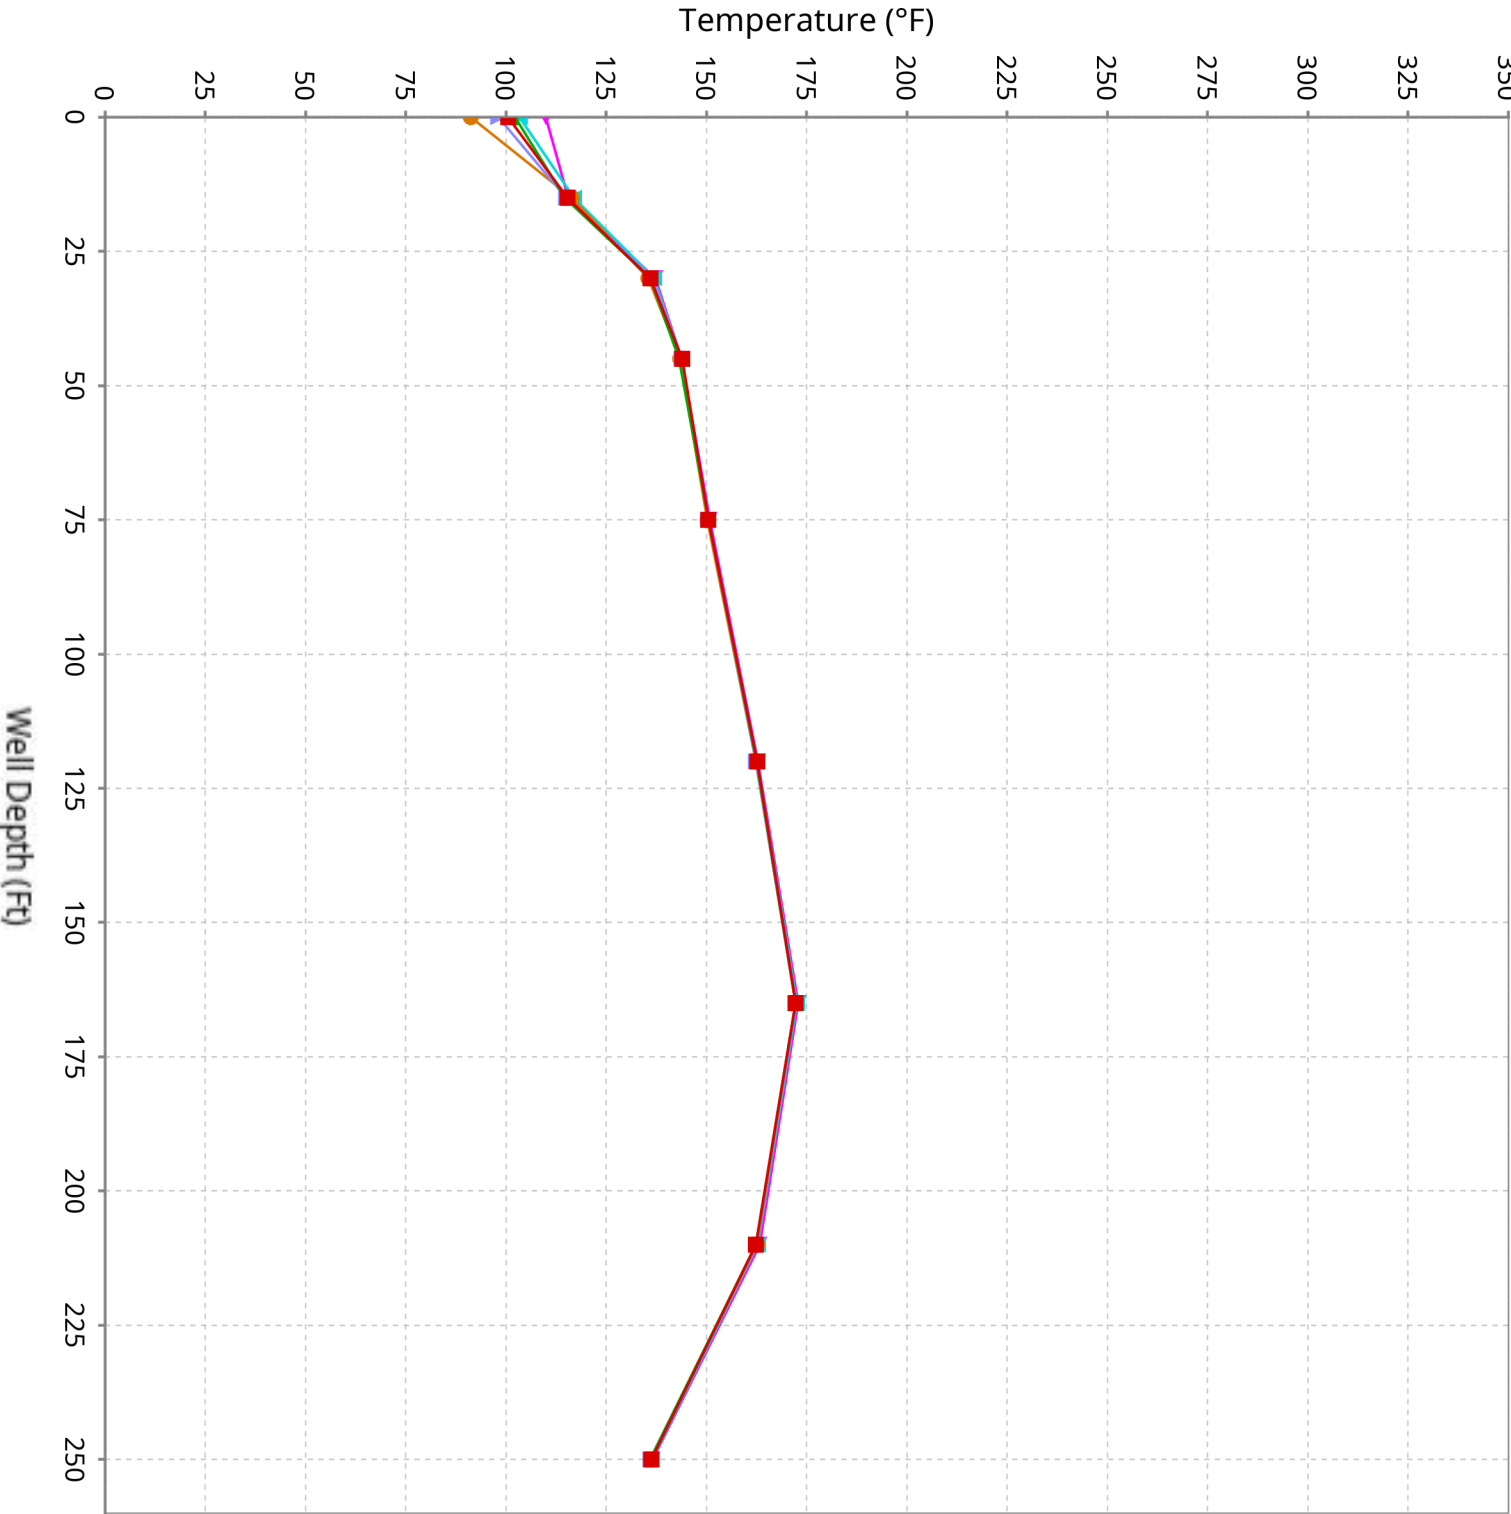

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-37

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

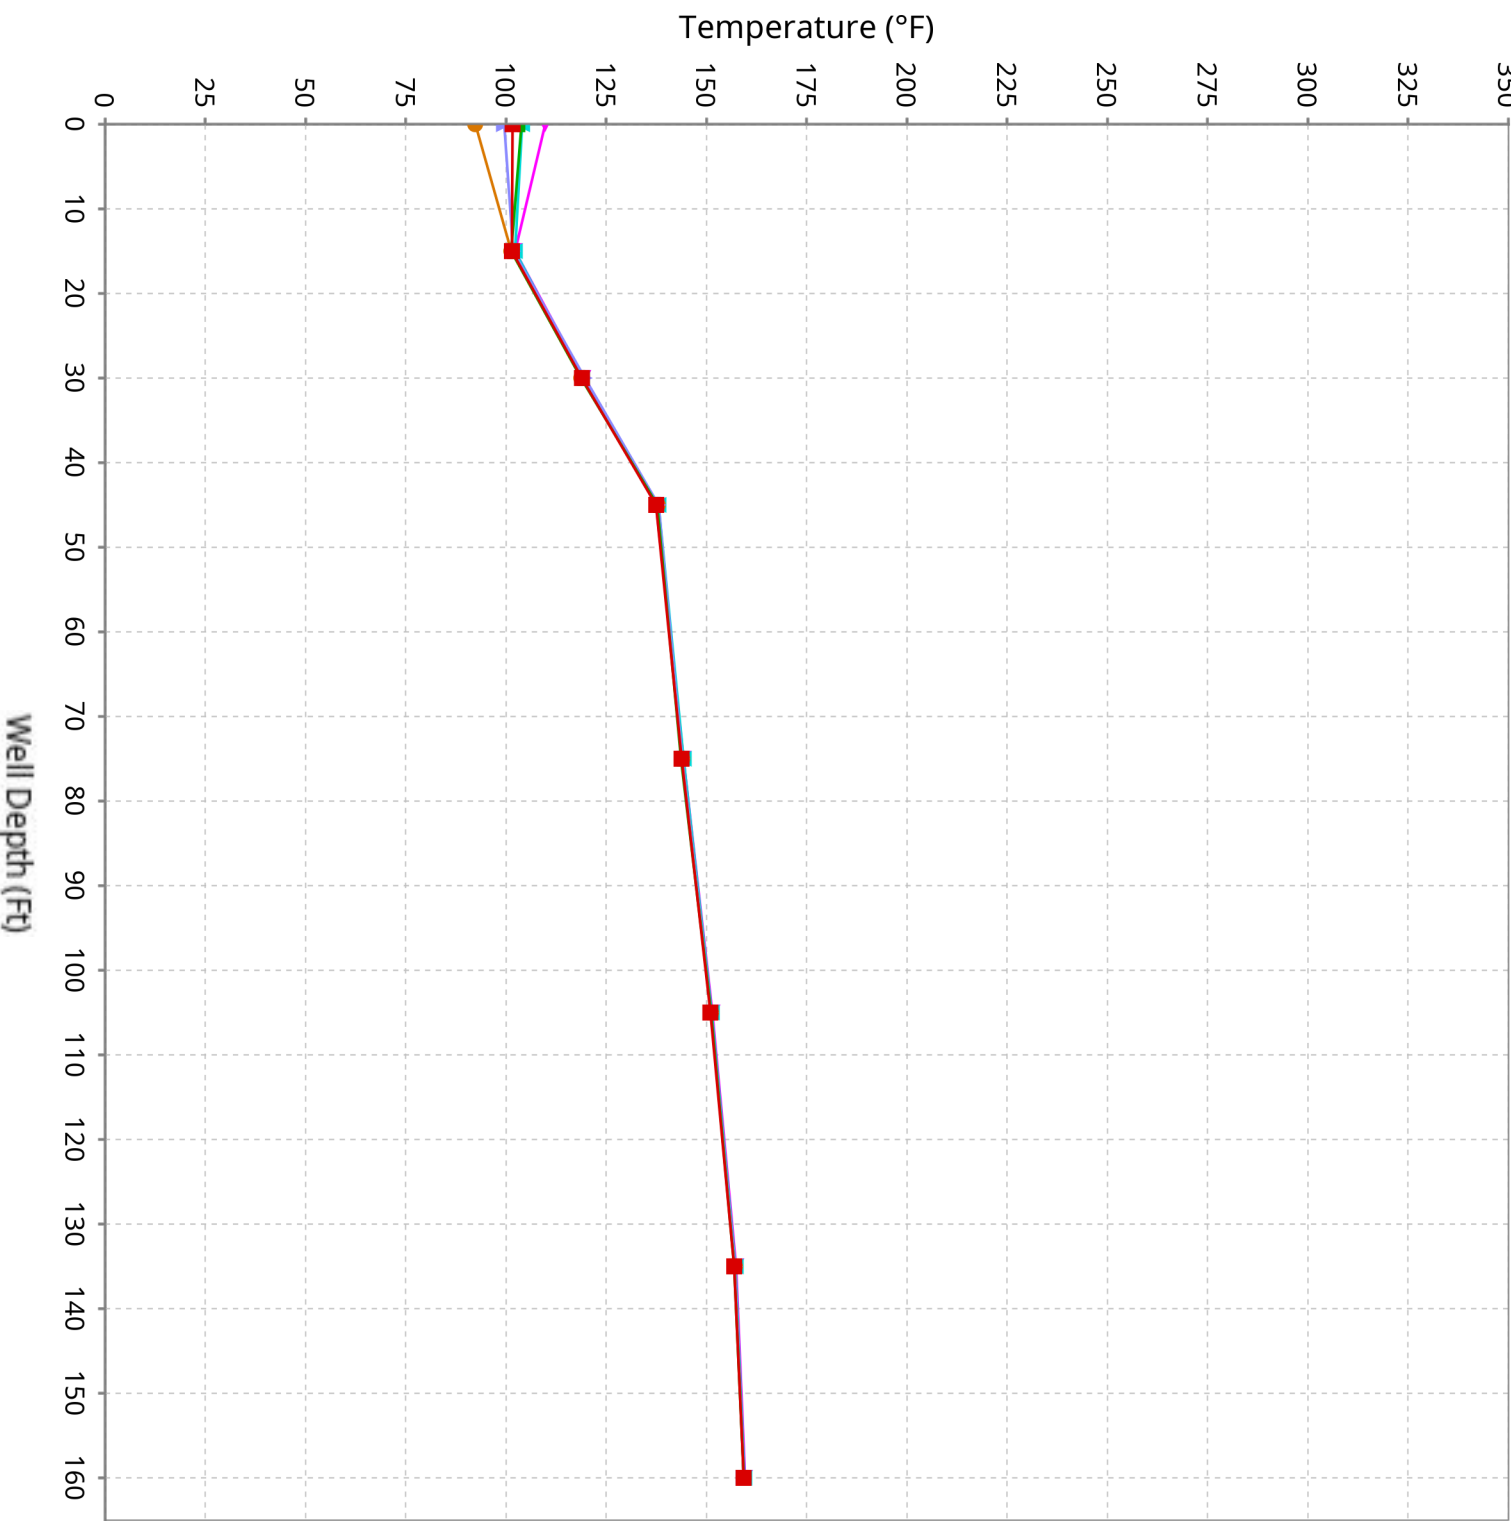

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-38

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

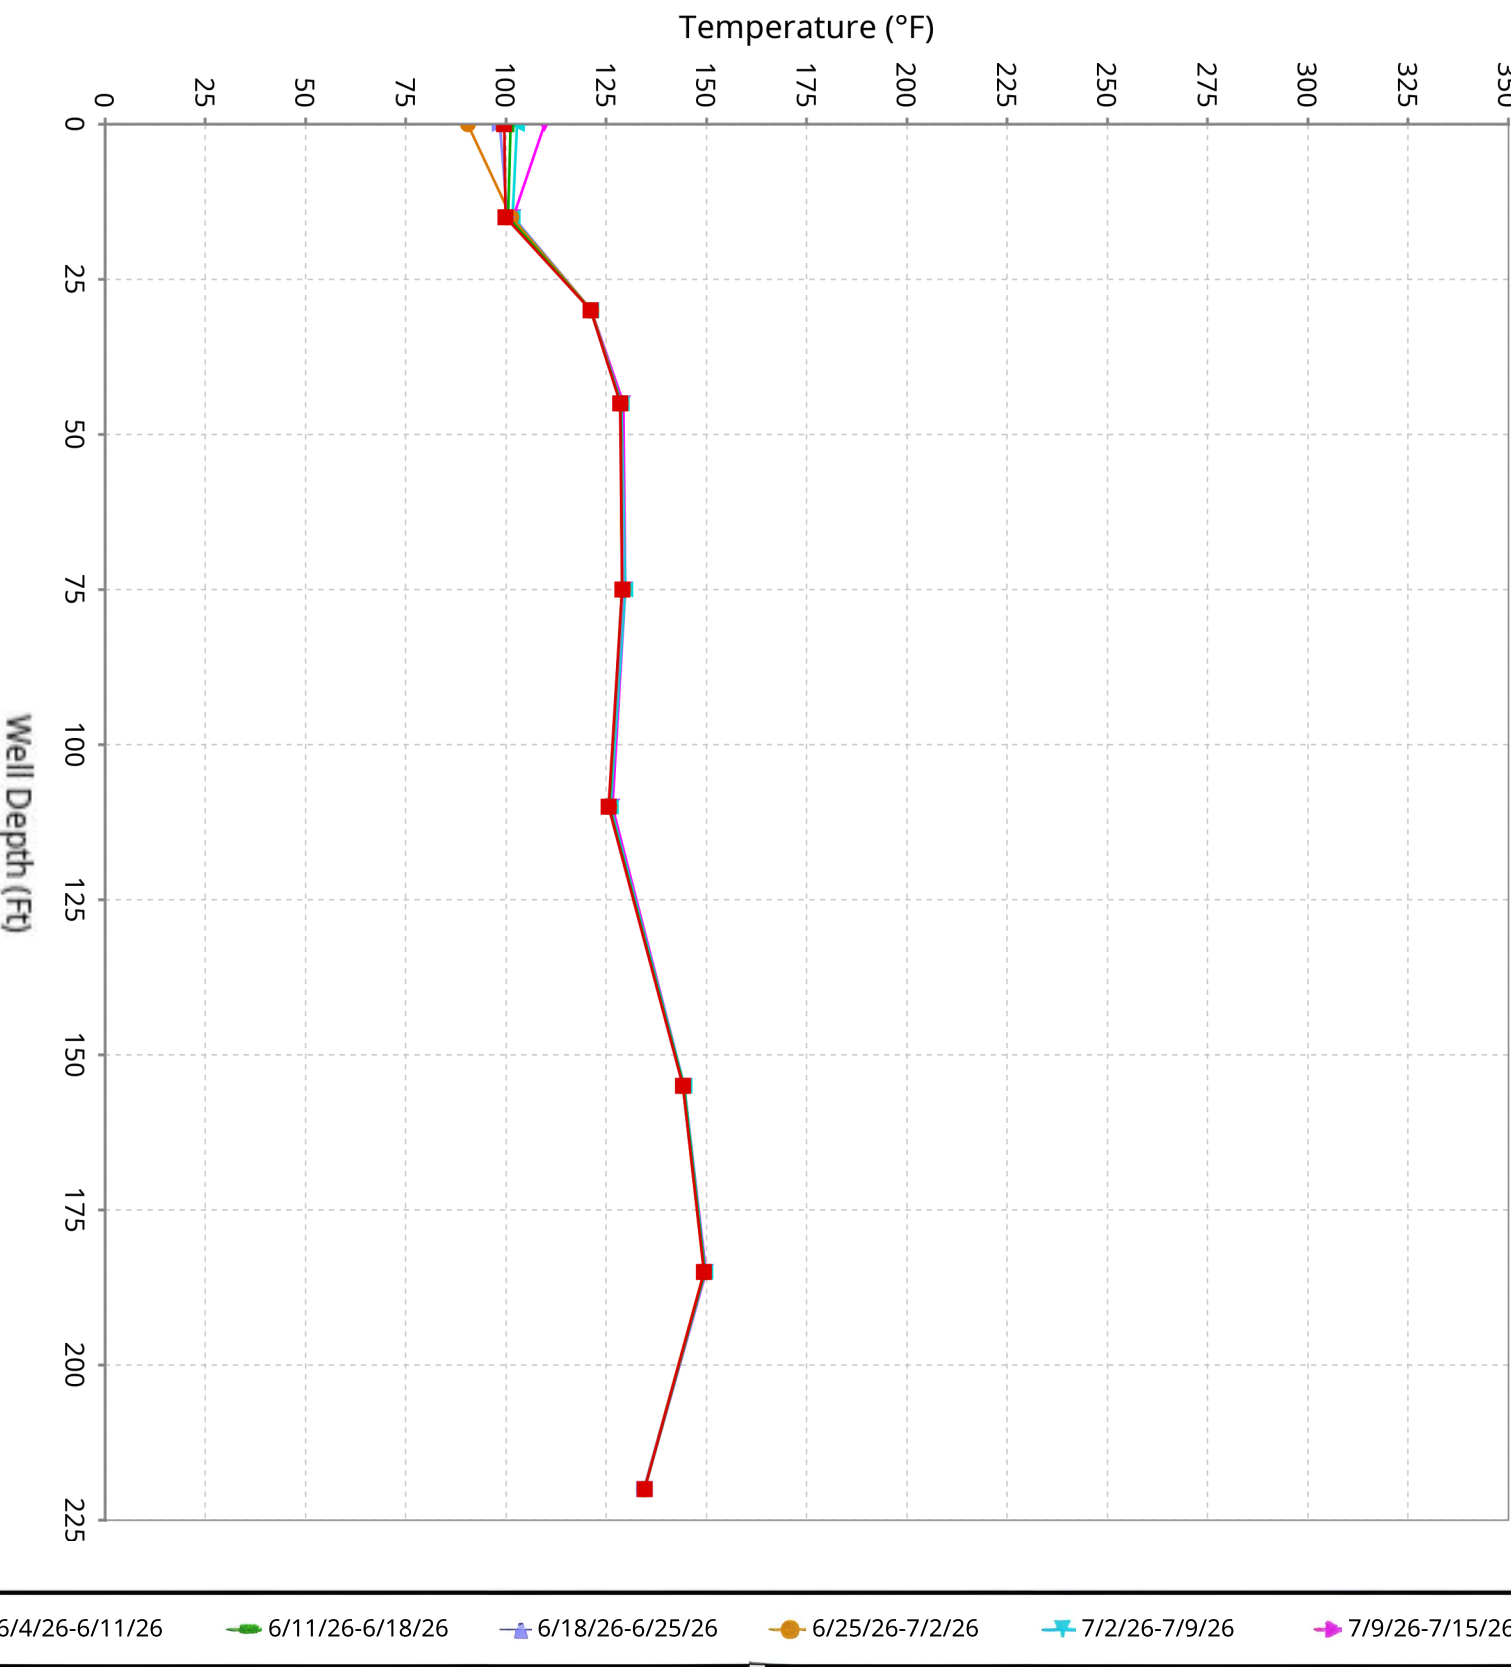

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-39

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

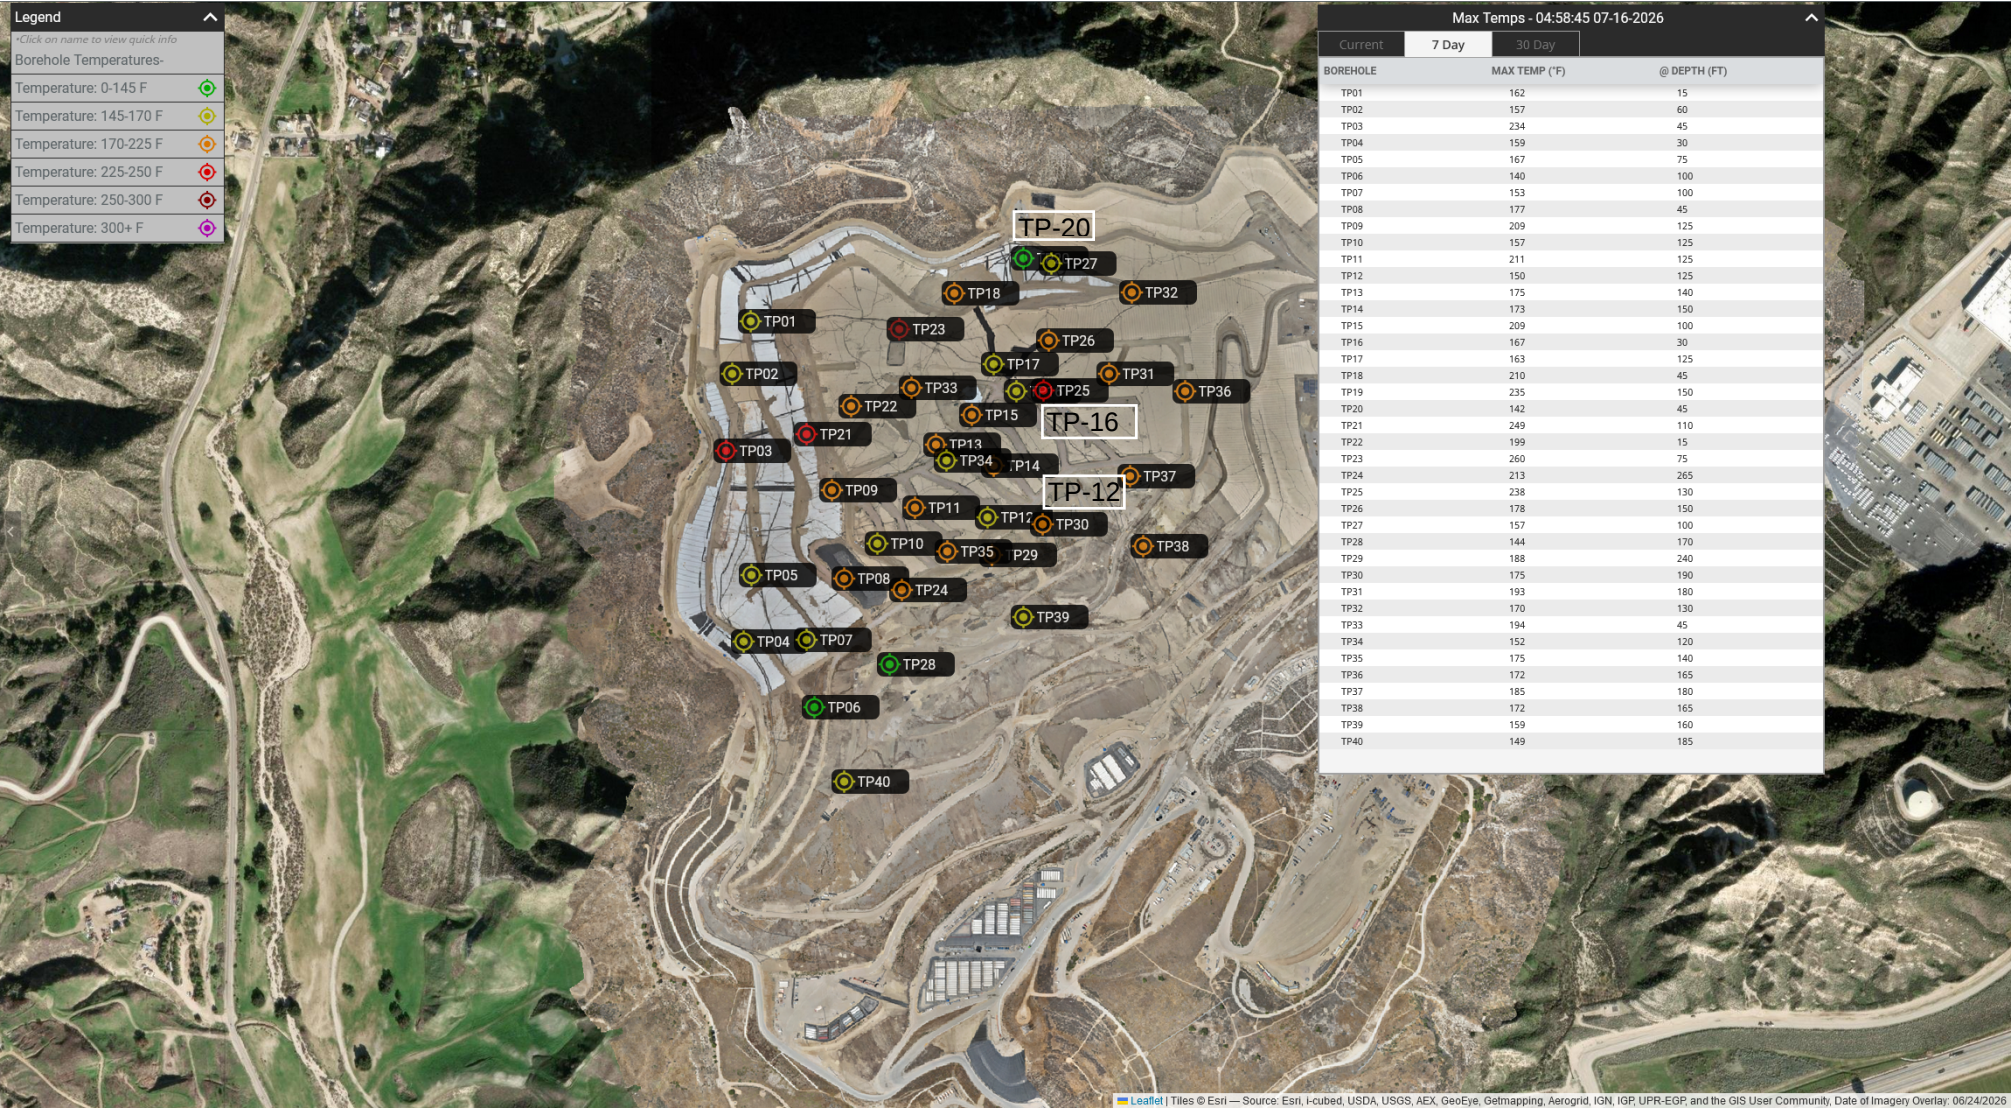

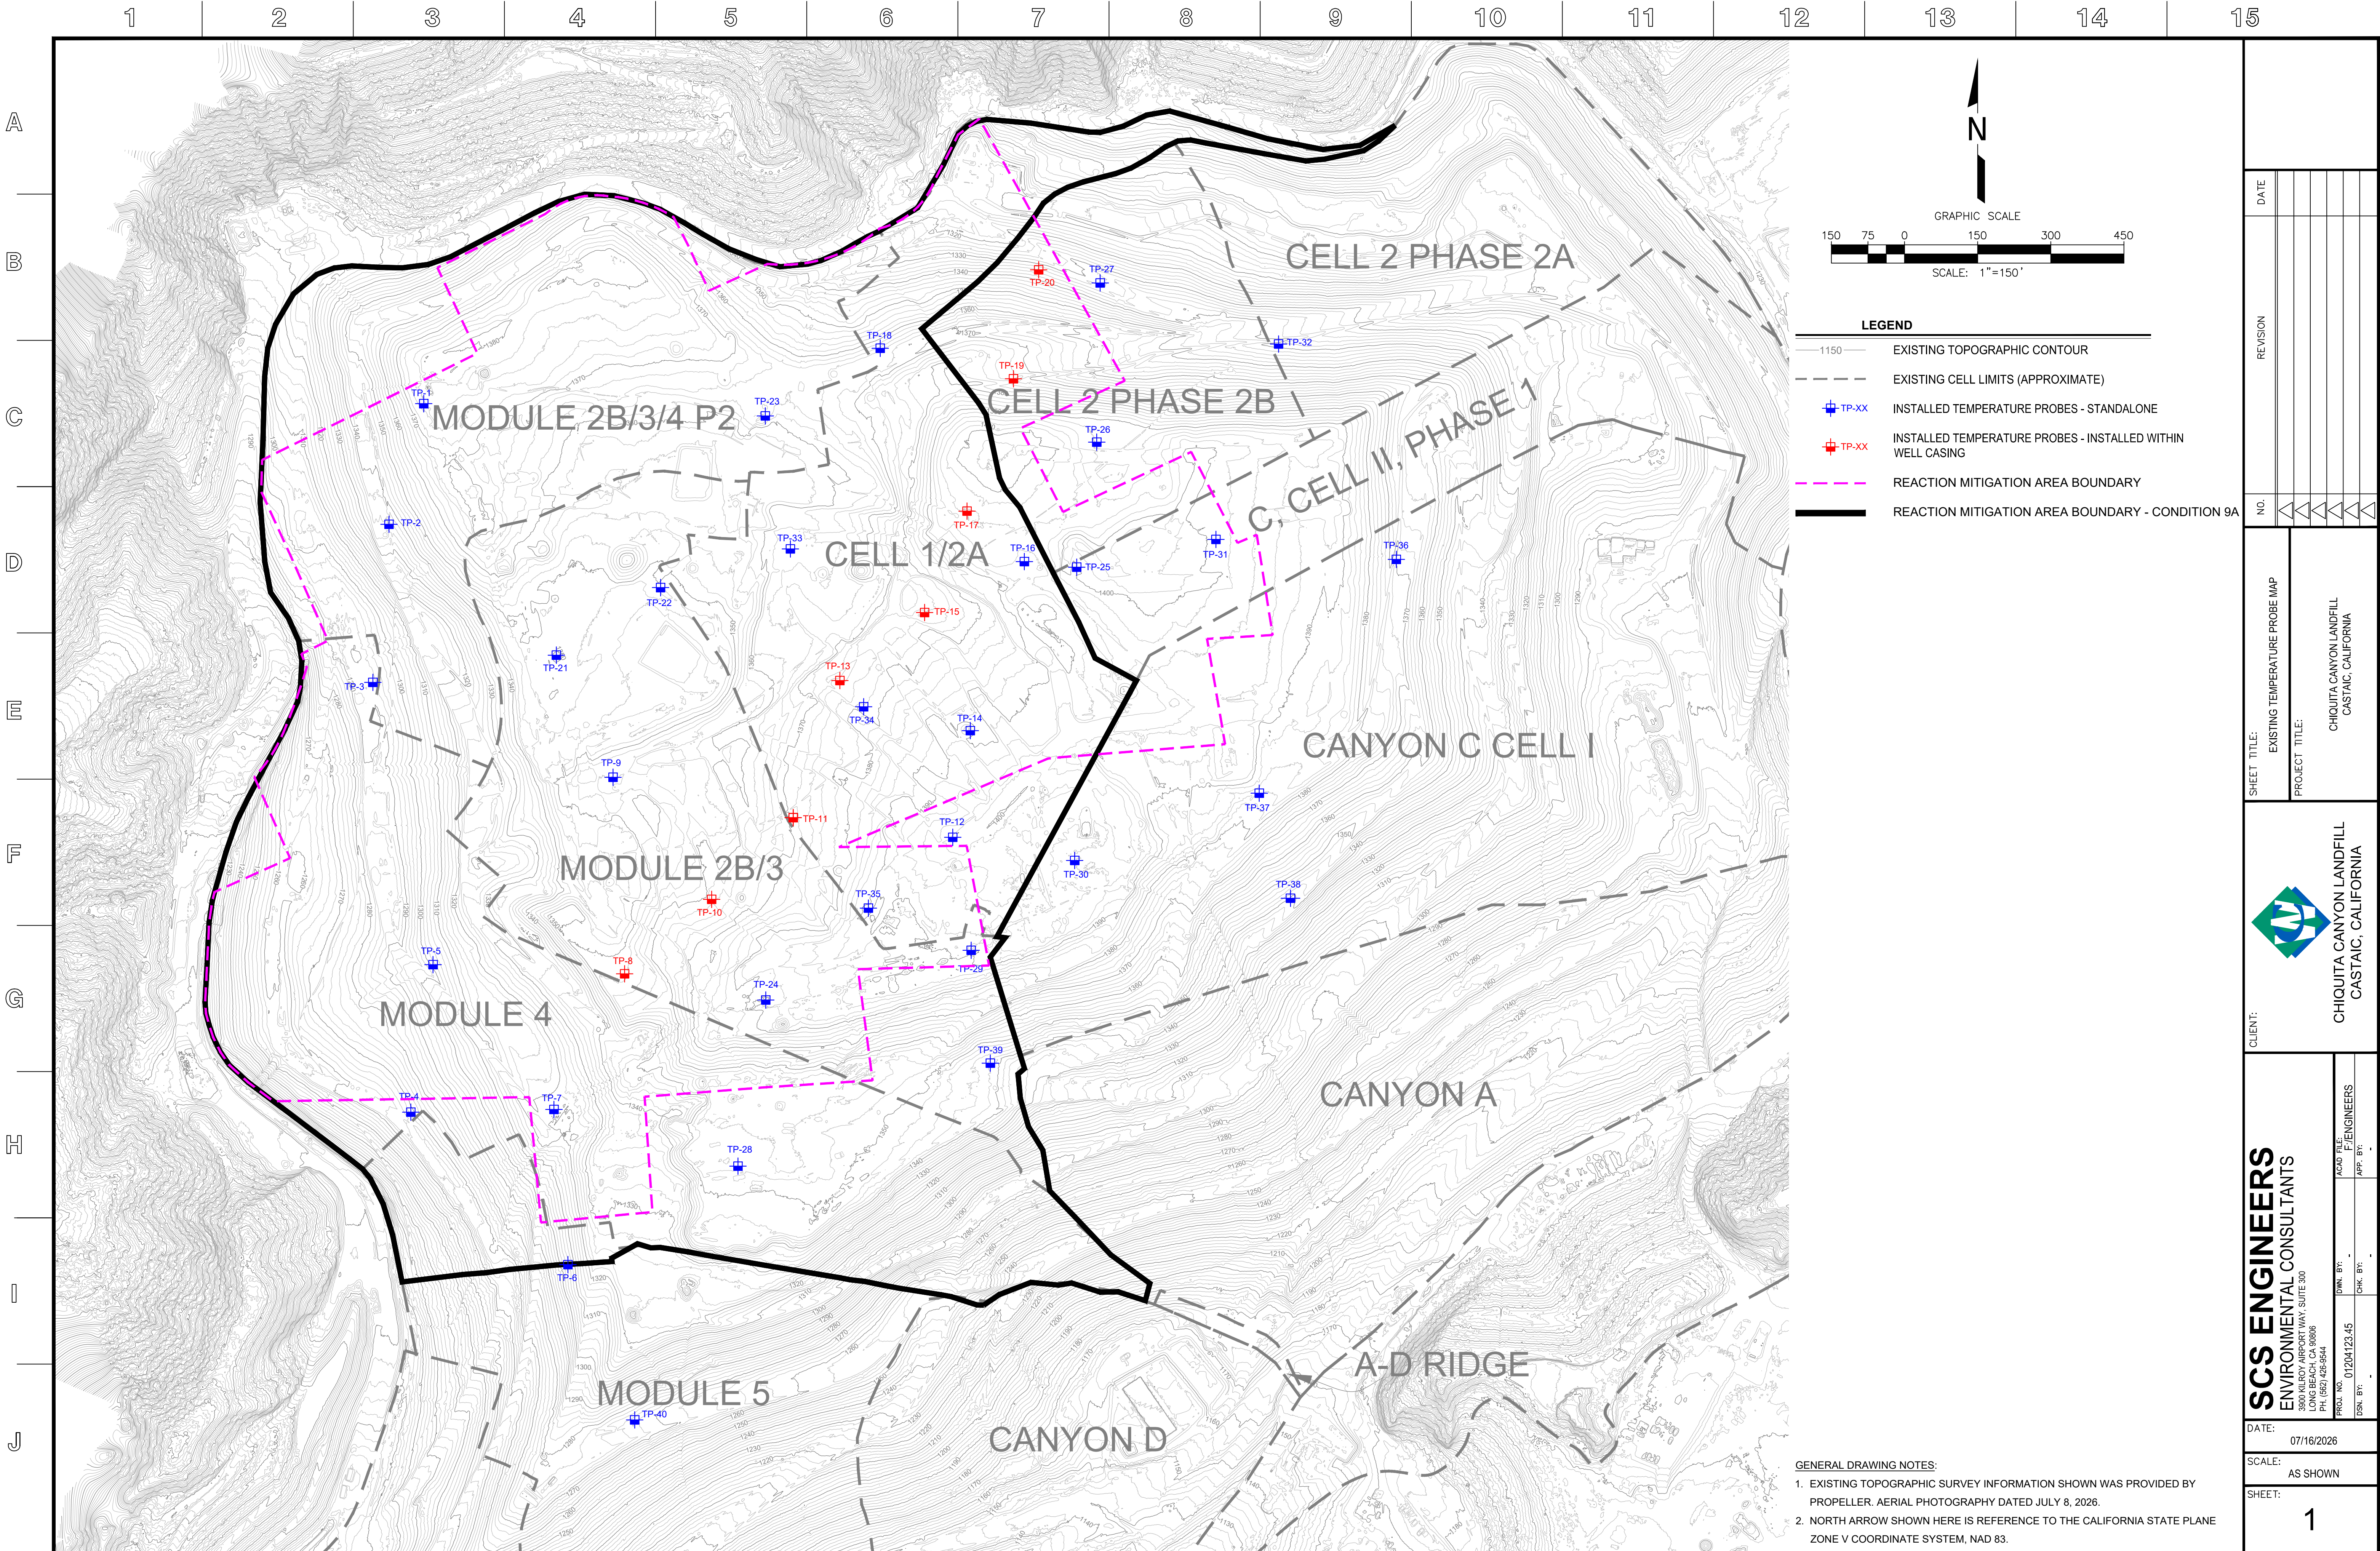

Vertical Temperature Profiles from Temperature Probes at Chiquita Landfill for TP-40

Maximum data for 6/4/2026 12:00 AM to 7/15/2026 12:00 AM

Maximum Vertical Temperature Map from Temperature Probes at Chiquita Landfill
