Subject: Leachate Seep Report
Chiquita Canyon Landfill
WDRs Order No. R4-2018-0172
File No. 67-020

Pursuant to MRP No. CI-6231 Section B.3.a, Chiquita Canyon, LLC (“Chiquita”) provides the following information regarding a seep that occurred on January 30, 2026, during which no more than 10 gallons of characteristically hazardous leachate associated with Group A seeped from beneath the geomembrane cover and into a stormwater channel. Liquid from the seep did not reach either stormwater basin. This is a conservative estimate based on visual observations by Chiquita staff. Chiquita maintains appropriate response materials, including fully stocked spill kits, and has trained staff on site to respond to spills, leaks, and seeps to prevent liquids from entering the stormwater system.

i. Map - A map showing the location(s) of seepage.

The incident occurred in grid 210, as indicated in Attachment A.

ii. Flow rate - An estimate of the flow rate.

The seep had a low flow rate.

iii. Description - A description of the nature of the discharge (e.g., all pertinent observations and analyses).

On January 30, 2026, at approximately 2:30 a.m., a seep was discovered in grid 210. Liquid seeped from beneath the geomembrane cover and into the nearby stormwater channel; however, no liquid reached either stormwater basin. Based on Chiquita’s current knowledge, it appears that the seep can be attributed to an increase of positive pressure due to all three flares being offline for an extended period the prior week.

February 6, 2026

Page 2 of 2

The liquid from the seep was dark brown in color with low viscosity and traveled as a light trickle.

iv. Location – Location of sample(s) collected for laboratory analysis, as appropriate.

No sampling was conducted for this seep.

v. Corrective measures – approved (or proposed for consideration) by the Regional Board Executive Officer.

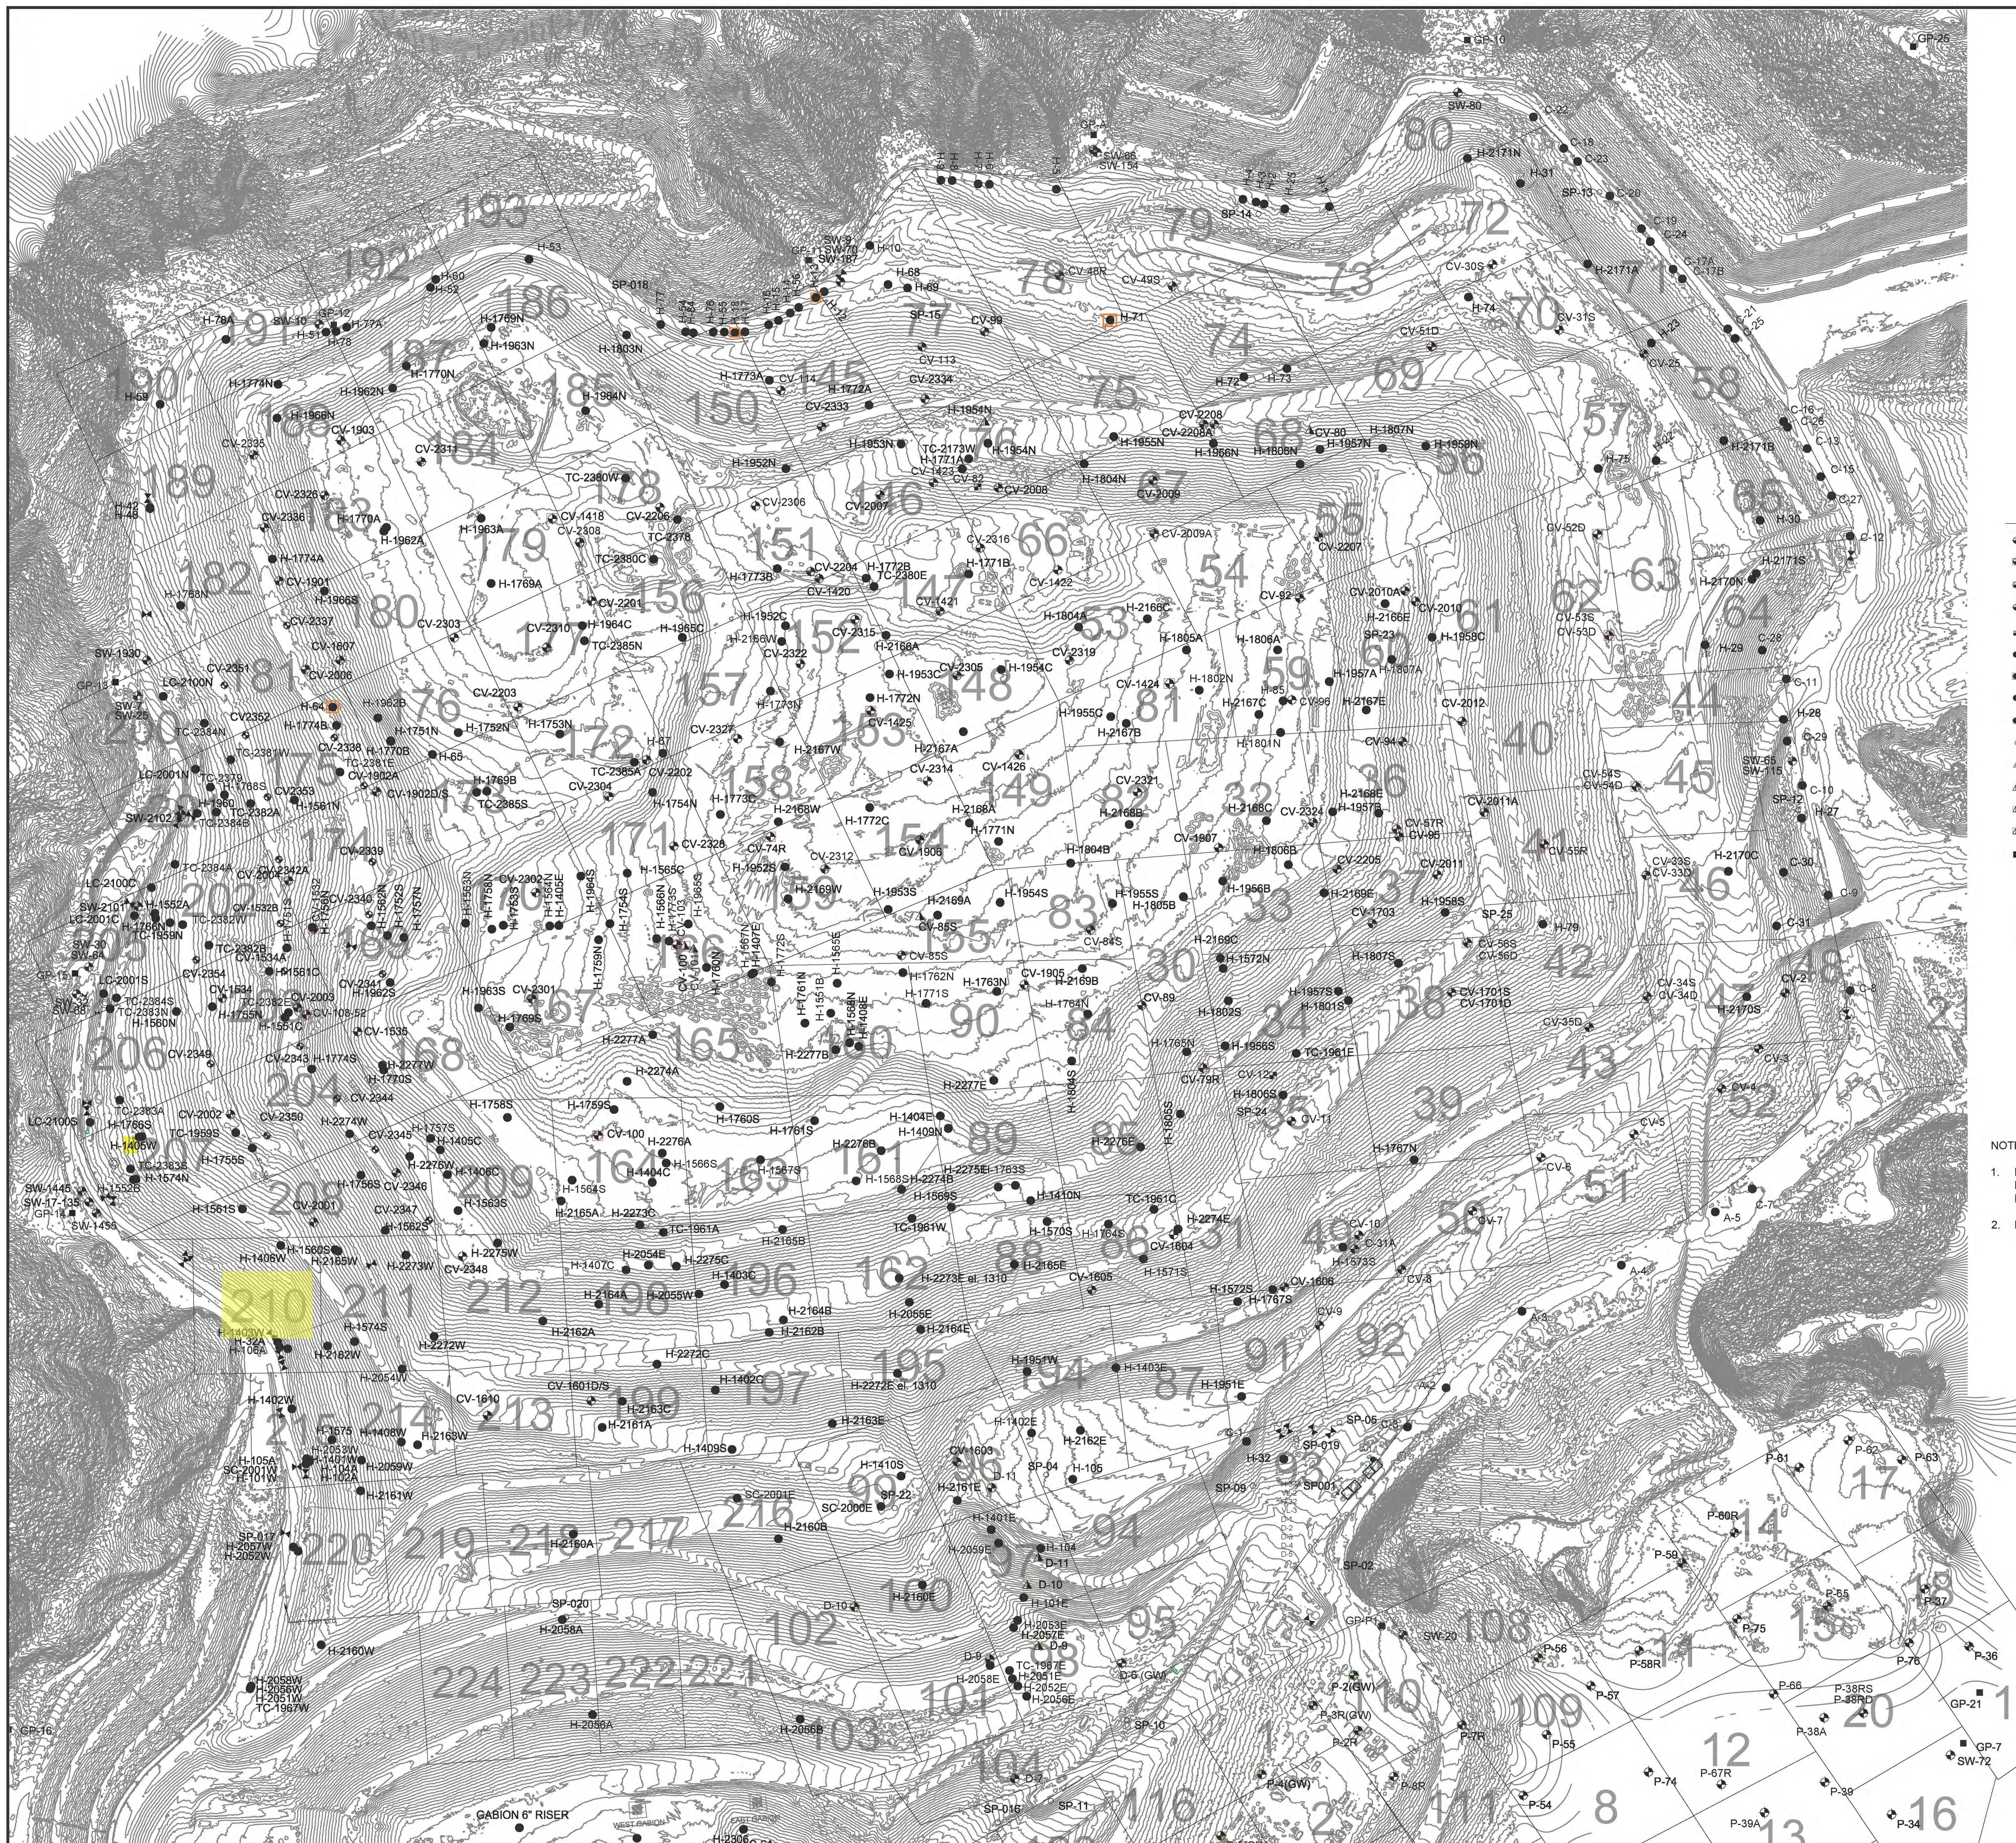

Chiquita personnel pressure washed the stormwater channel while applying vacuum to ensure the proper collection of all wash water and standing liquid. A berm was created around the location of the seep. A steel plate and geomembrane cover were then placed on top of the bermed area to mitigate the potential for odors. Finally, a hose was inserted to remove any standing liquid from the bermed area in the event the seep produced any additional liquid. No liquid has been observed in the area since January 30, 2026. Notwithstanding, Chiquita personnel continue to inspect the area multiple times per day.

If you should have any questions regarding this report, please do not hesitate to contact me at (661) 257-3655.

Sincerely,
Chiquita Canyon, LLC
