**Subject: Leachate Seep Report  
Chiquita Canyon Landfill  
WDRs Order No. R4-2018-0172  
File No. 67-020**

Pursuant to MRP No. CI-6231 Section B.3.a, Chiquita Canyon, LLC (“Chiquita”) provides the following information regarding a seep discovered on March 23, 2026, during which approximately 1/2 cup of characteristically hazardous leachate associated with Group A traveled off the landfill’s liner and entered the stormwater channel but did not reach either sedimentation basin. This is a conservative estimate based on visual observations by Chiquita staff. Chiquita maintains appropriate response materials, including fully stocked spill kits, and has trained staff on site to respond to spills, leaks, and seeps to prevent liquids from entering the stormwater system.

**i. Map - A map showing the location(s) of seepage.**

The seep occurred in grid 207, as indicated in **Attachment A**.

**ii. Flow rate - An estimate of the flow rate.**

The seep had a very low flow rate.

**iii. Description - A description of the nature of the discharge (e.g., all pertinent observations and analyses).**

On March 23, 2026, at approximately 6:55 a.m., a seep was observed on the west side of the landfill, in grid 207. Approximately 1/2 cup of liquid from the seep entered the stormwater channel but did not reach either sedimentation basin. The small amount of liquid came from below the surface of the perimeter road and directly into the channel. The liquid was clear in color with low viscosity and traveled with a very low flow rate.

**iv. Location – Location of sample(s) collected for laboratory analysis, as appropriate.**

No sampling was conducted for this seep.

**v. Corrective measures – approved (or proposed for consideration) by the Regional Board Executive Officer.**

Upon discovery of the seep, Chiquita added soil to the affected area within approximately 7 hours. Chiquita later placed sandbags on the edge of the stormwater channel to prevent liquids from entering the channel. The area was then covered with a piece of geomembrane cover to minimize potential exposure to the atmosphere.

Chiquita is continuing to monitor this area and apply soil as needed. This seep is related to other seeps in the vicinity. Chiquita will be constructing a soil buttress on the west side of the Landfill, adjacent to the prior “west slope toe drain project,” considering the continued extrusion of reacted material at certain preferential pathways that daylight on the west slope. Chiquita and consultants are in the process of planning and designing this project.

If you should have any questions regarding this report, please do not hesitate to contact me at (661) 257-3655.

Sincerely,  
Chiquita Canyon, LLC

Matt Breuer
