**Subject: Leachate Seep Report
Chiquita Canyon Landfill
WDRs Order No. R4-2018-0172
File No. 67-020**

Chiquita Canyon, LLC (“Chiquita”) hereby provides the following information regarding a seep related to the previously reported seepage along the western slope. Because this seep has been previously reported to the Regional Water Quality Control Board, it is Chiquita’s understanding that this report is not required pursuant to Section B.3.a MRP No. CI-6231. However, out of an abundance of caution and in an effort to be transparent, Chiquita voluntarily provides the following information regarding this seep, during which approximately 1 1/2 gallons of characteristically hazardous liquid associated with Group A reached the perimeter road, but did not reach the stormwater channel or either sedimentation basin. This is a conservative estimate based on visual observations by Chiquita staff. Chiquita maintains appropriate response materials, including fully stocked spill kits, and has trained staff on site to respond to seeps to prevent liquids from entering the stormwater system.

i. Map - A map showing the location(s) of seepage.

The seep was observed in grid 207, as indicated in **Attachment A**.

ii. Flow rate - An estimate of the flow rate.

The seep had a very low flow rate.

iii. Description - A description of the nature of the discharge (e.g., all pertinent observations and analyses).

On May 31, 2026, at approximately 7:03 a.m., a seep was observed in grid 207. Approximately 1 1/2 gallons of liquid from the seep reached the perimeter road, but no liquid entered the stormwater channel or either stormwater basin. The liquid was dark amber in color with low viscosity and traveled with a very low flow rate.

iv. Location – Location of sample(s) collected for laboratory analysis, as appropriate.

No sampling was conducted for this seep.

v. Corrective measures – approved (or proposed for consideration) by the Regional Board Executive Officer.

Upon discovery of the seep, the liquid was vacuumed and soil was added to the impacted area. Chiquita also covered the area with 60-mil geosynthetic liner and sandbags to prevent potential emissions. Cleanup commenced immediately and was completed within approximately 30 to 42 minutes. This seep is related to the previously reported seepage along the west slope of the landfill. To remedy this seeping and pursuant to Work Order Letter: *RE: Additional Work Required Under UAO for West Toe Improvements*, dated March 17, 2026, Chiquita is in the process of designing, planning, and installing a soil buttress.

This seep was observed again on June 3, 2026, and Chiquita implemented similar mitigation measures to promptly contain the liquid. Chiquita will continue to monitor this area and implement similar mitigation measures, as needed, until this seepage along the west slope is mitigated by the West Toe Buttress Project.

If you should have any questions regarding this report, please do not hesitate to contact me at (661) 257-3655.

Sincerely,
Chiquita Canyon, LLC

Matt Breuer
