**Subject:** Re: Chiquita Canyon Landfill - TMP Temperature Submittal  
**Attachments:** Daily Maximum Borehole Report-6-24-2026.pdf; Borehole Profiles Six Week Maximum-6-24-2026.xlsx

In accordance with the LEA's June 6, 2024 Compliance Order and related LEA correspondence, Chiquita Canyon, LLC (Chiquita) submits the attached weekly temperature graphs of all temperature monitoring probes (TMPs) with weekly maximum trends plotted over six weeks from May 14, 2026, through June 24, 2026, with a map of the maximum temperatures recorded in the past week and the below narrative on recorded temperature data. We included a separate map demonstrating the locations of the 40 temperature monitoring probes in relation to the reaction area boundary because the real time data monitoring software that is used to display the probe data is not able to import a geolocated boundary delineated in CAD.

From June 18, 2026, through June 24, 2026, there were nine recorded temperature increases and five recorded temperature decreases that triggered the notification limits set forth in the LEA's October 4, 2024 letter.

Chiquita provides the following updates:

- TP-08
  - The 30-foot thermocouple showed an increase in maximum temperature of 11°F from 146°F to 157°F from June 18th to June 23rd.
  - The 45-foot thermocouple showed an increase in maximum temperature of 31°F from 138°F to 168°F from June 10th to June 19th.
  - The 45-foot thermocouple showed an increase in maximum temperature of 29°F from 139°F to 168°F from June 18th to June 19th, then a decrease in maximum temperature of 28°F from 168°F to 141°F from June 19th to June 20th, then an increase in maximum temperature of 24°F from 142°F to 166°F from June 21st to June 22nd, and then a decrease in maximum temperature of 25°F from 167°F to 142°F from June 23rd to June 24th.
  
- TP-13

- The 30-foot thermocouple remained consistent with previous recorded temperatures.
- The 45-foot thermocouple showed a decrease in maximum temperature of 17°F from 163°F to 146°F from June 17th to June 18th, then an increase in maximum temperature of 15°F from 144°F to 159°F from June 21st to June 22nd, and then a decrease in maximum temperature of 15°F from 159°F to 143°F from June 23rd to June 24th.
- TP-14
  - The 150-foot thermocouple reported a maximum temperature of 249°F on May 10th, which was anomalous and likely associated with a potential thermocouple sensor malfunction. As a result, the reported temperatures of 0°F from May 11th to May 15th are also considered anomalous. The 150-foot thermocouple was replaced on May 16th and temperatures were consistent with previous recorded values.
- TP-23
  - The 15-foot thermocouple reported temperatures of 0°F from May 13th to May 18th, which were anomalous and likely associated with a potential thermocouple sensor malfunction. On May 19th, a temperature of 189°F was reported, with temperatures remaining consistent with previous recorded values through May 27th with the thermocouple functioning as normal. The 15-foot thermocouple wiring was repaired and temperatures were consistent with previous recorded values.
  - The 30-foot thermocouple reported temperatures of 0°F from May 13th to May 18th, which were anomalous and likely associated with a potential thermocouple sensor malfunction. On May 19th, a temperature of 221°F was reported, with temperatures remaining consistent with previously recorded values through May 27th with the thermocouple functioning as normal.
  - The reported maximum temperature reading of 2508°F at the 30-foot thermocouple is considered anomalous and is believed to be associated with a potential thermocouple sensor malfunction. On May 19th, the 30-foot thermocouple, a temperature of 221°F was reported, with temperatures remaining consistent with previously recorded values through June 25th with the thermocouple functioning as normal. The 30-foot thermocouple wiring was repaired and temperatures were consistent with previous recorded values.
- TP-24
  - The 155-foot thermocouple showed an increase in maximum temperature of 13°F from 167°F to 181°F from June 22nd to June 24th.
  - The 210-foot thermocouple showed a decrease in maximum temperature of 13°F from 202°F to 190°F from June 19th to June 20th, and then an increase in maximum temperature of 12°F from 190°F to 202°F from June 20th to June 23rd.
- TP-25
  - The 90-foot thermocouple showed an increase in maximum temperature of 41°F from 147°F to 189°F from June 4th to June 23rd.
  - The 90-foot thermocouple showed an increase in maximum temperature of 38°F from 151°F to 189°F from June 18th to June 23rd, and then an increase in maximum temperature of 36°F from 153°F to 189°F from June 22nd to June 23rd.

We also included an Excel file of the daily maximum temperatures with any high temperatures that triggered the above notification limits highlighted, as requested in the LEA's September 3, 2024 letter.

No other sensors showed major sustained increases or decreases in temperature within the landfill per the LEA's reporting limits and no other sensors showed an anomaly, outlier, data gap, or malfunction, as discussed above. In the past week there were no other recorded temperature increases in the TMP field of greater than 10°F within 7 days or less, greater than 20°F within 14 days or less, or greater than 30°F within 21 days or less.

As stated in Chiquita's response to the LEA's September 3, 2024, and October 4, 2024 adjustments of the temperature notification criteria, we do not believe these notification limits correspond to actual conditions present in a reaction landfill. Temperature is a primary factor in determining the reaction area but increases in temperature from relatively cool temperatures to normal landfill temperatures are not indicative of reaction area movement. As stated in CalRecycle's response to the soil barrier reaction plan received September 24, 2024, presence of in-situ waste temperatures in excess of 230°F would be criteria indicative of a reaction; increases in shallow temperatures below this CalRecycle-suggested threshold are not indicative of a reaction. Additionally, all data and evidence at the landfill continue to show that reaction conditions are present and there is no "smoldering" event as suggested in CalRecycle's September 25, 2024 response that was used as a basis for the LEA's October 4, 2024 letter.

We will continue to update the LEA on the TMP readings.
