Question: 1

A broadcaster, who has implemented Media Cloud, wants to have a comparative view of planned versus actual revenue based on actual impressions.

In which two ways can a Consultant obtain both planned and actual revenue amounts?

Choose 2 answers

- A. Planned revenue from Media Cloud and actuals from Ad Server
- B. Planned revenue and actuals from Media Cloud
- C. Planned revenue from Ad Server and actuals from Media Cloud
- D. Planned revenue and actuals from Ad Server

Answer: A, B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Media Cloud is designed to provide planned revenue figures as part of the media planning and booking process, while actual revenue data often comes from external Ad Servers that track delivery and impressions. To have a complete comparative view, consultants commonly combine planned revenue data maintained within Media Cloud with actual revenue data retrieved from the Ad Server, or use Media Cloud's integrated capabilities if actuals are captured there. Salesforce Media Cloud documentation supports this dual approach to revenue tracking by integrating planned data internally and actuals from connected Ad Servers for accurate financial analysis and reporting.

Question: 2

A Media Publisher is using Advertising Sales Management (ASM) to manage their B2B Ad Sales business and has decided to use Google Ad Manager (GAM).

Which two actions should a Consultant perform before testing the GAM integration?

Choose 2 answers

- A. Create a new Named Credential to store the GAM endpoint.
- B. Add the GAM endpoint in the OmniStudio Integration Procedure.
- C. Create a new Auth. Provider that specifies the Consumer Key and Consumer Secret from GAM.
- D. Add the GAM URL as a new CSP Trusted Site.

Answer: A, B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Before testing GAM integration, it is necessary to configure secure and proper connectivity. Creating a Named Credential in Salesforce secures the endpoint URL along with authentication details, which simplifies callouts. Adding the GAM endpoint to the OmniStudio Integration Procedure ensures that the system can route requests correctly. The Auth Provider creation is a valid step but not always required if Named Credentials handle authentication. Adding the GAM URL to the Content Security Policy (CSP) Trusted Sites ensures browser security for client-side interactions but is a secondary step.

Question: 3

A publishing company has been using Media Cloud for the last six months and now wants to send order data over to the Google Ad Management platform. The company has the client and secret from Google. Which element should a Consultant create within Salesforce to be able to enter these details?

- A. Named Credentials
- B. Auth. Provider
- C. Connected App
- D. Custom Metadata

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Named Credentials in Salesforce are used to securely store external service endpoints and authentication details such as client ID and client secret. When integrating with Google Ad Manager, the client and secret are used for OAuth authentication. Named Credentials simplify authentication handling

<https://www.certkillers.net>

for callouts by managing tokens automatically and securely. Connected Apps are typically for OAuth client registration but not storing credentials in this use case.

Question: 4

During proposal line item creation, a Consultant needs to be able to select a value for a picklist type attribute.

Which non-overridable behavior must the Consultant select during the assignment to the parent object type?

- A. Is Not Assetizable
- B. Is Encrypted
- C. Is Not Translatable
- D. Run-time Configurable

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Run-time Configurable behavior allows the picklist values to be determined dynamically during runtime rather than being statically assigned. This is critical in proposal line items to select picklist values that may change or depend on other variables dynamically. The other options either disable functionality (Is Not Assetizable), restrict translations, or encrypt values but do not allow dynamic selection.

Question: 5

A CTO of a B2B advertising publishing company asked an Administrator who worked on making the Media Cloud application live, for their help in monitoring the real-time information on system performance and security.

Where can the Administrator find this information?

- A. trust.salesforce.com
- B. system.salesforce.com
- C. media.salesforce.com
- D. monitor.salesforce.com

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

trust.salesforce.com is the official Salesforce Trust site that provides real-time information on system status, performance, security incidents, and maintenance notifications. Administrators use this site to monitor org health and planned outages. Other options either do not exist or are not official Salesforce system status portals.
