Proposition 218 and Cost-based Rates

Key California Legal And Regulatory Requirements

Cost-of-Service Requirements

- Proposition 218 (Article XIIIC and XIIID of California Constitution)
- > Proposition 26
- California Government Code 54999

Water Conservation

- Article X of California Constitution
- Water Code Section 106 Domestic water use prioritized over irrigation
- SB 606 + AB 1668 calculated efficiency and reporting
- SWRCB self certification of three years adequate supplies and set conservation standards equal to their projected supply shortage

Proposition 218 Substantive Requirements

Revenues

cannot exceed the funds required to provide the service

Revenues

cannot be used for any purpose other than to pay for the service for which it was charged.

The amount of the fee cannot exceed the proportional cost of providing service to that parcel

- Set rates proportional to the cost of providing the service
- Reasonably allocate amongst grouped feepayers, based on cost-of-service
- Use reliable data

Proposition 218 Procedural Requirements

Identify parcels subject to the charge.

Calculate

the amount of the charge to be imposed.

Provide written notice to all record owners including:

- The amount
- The basis upon which the amount was calculated
- The reason for the charge
- The date, time, and location of a public hearing on the charge

Hold a public hearing no less than 45 days from mailing the notice.

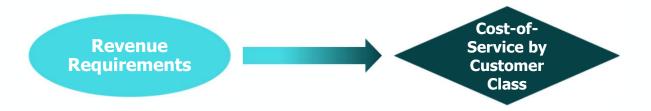

- Consider all protests to the charge.
- If a majority of owners protest the charge, the agency shall not adopt it.

Cost-of-Service

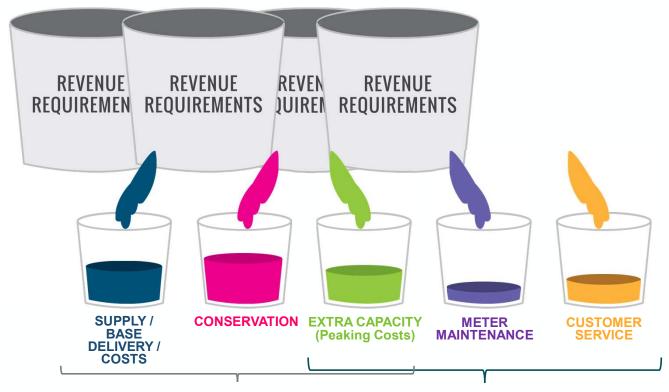

What is Cost-of-Service?

- Method to recover costs from users in proportion to their use of the system, recognizing the impact of each class on system facilities and operations
 - A cost-based process of converting revenue requirements into unit costs
 - Allocation of cost-of-service to customer classes is based on customer usage characteristics
- Cost-of-service is the fundamental benchmark used for establishing utility rates in the United States

FRCD/EGWD's Current Commodity Rate

- Residential
 - Two-tier rate
 - <= 30 ccf/mo
 - > 30 ccf/mo
 - In 2013, tier 1 designed to capture the majority of use
- Non-residential: Uniform rate
- Irrigation: Uniform rate

Cost Causation Components – Base Extra Capacity Method

Base Costs: O&M expenses and capital costs associated with service to customers under *average* load conditions (base use)

Peaking Costs (Max Day): Costs associated with serving water during peak flows in excess of base use

Meter Maintenance: Maintenance and capital costs related to meters

Customer Service: Costs associated with serving customers, irrespective of the amount or rate of use: Meter reading, billing, customer accounting, customer service, collection expenses

Conservation: Costs associated with a conservation program

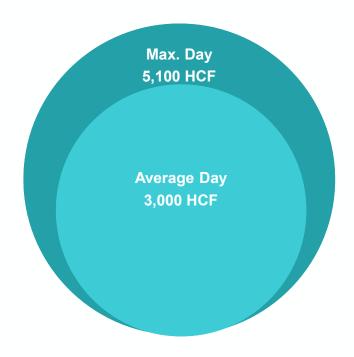

Definition of Peaking Costs (Max Day Costs)

Pipeline diameters are used as an example to underscore and visually illustrate how much more infrastructure is needed to meet peak demands.

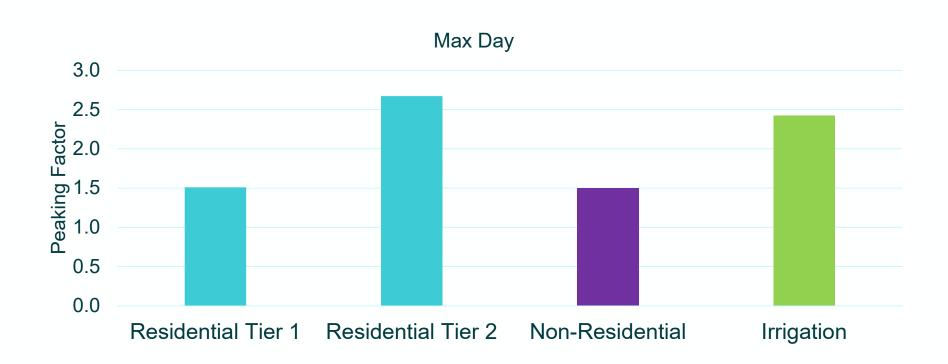

The same argument is extended to water storage tanks and pumps.

Larger pipes and tanks are more expensive to build and maintain and replace than smaller pipes/tanks

Costs are proportional to the area shown

Customer Class Peaking Factors Are Used To Allocate Costs

Capacity Fees

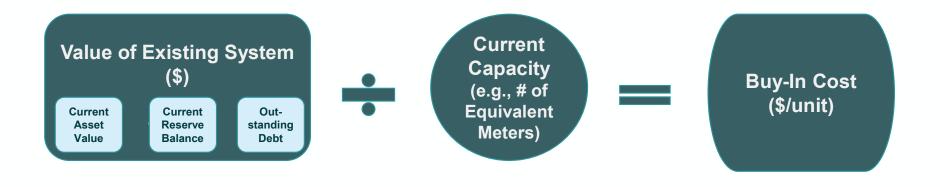

Capacity Fee Requirement

- Assembly Bill ("AB") 1600 (codified as California Government Code Sections 66000-60025)
- Capacity/Development Fees must not exceed the share of costs associated with providing service

FRCD/EGWD's Capacity Fee

- One-time charge
- Applies to all new development requiring water from the system
- Purpose: Reimburse existing customers for their investment in the system

Equity Buy-in

Capacity Fee – Service Area 1

| Basis of Proposed Water Capital Fee | Equ | iity Buy-in |
|------------------------------------------|-----|-------------|
| Existing Equity Buy-In Component | | RCLD-Total |
| SA1 Backbone System Value | \$ | 48,877,117 |
| Less SA 1 Outstanding Debt Principal (1) | \$ | 21,488,535 |
| SA1 Cash on Hand (1) | \$ | 10,067,262 |
| Adjusted System Value | \$ | 37,455,844 |
| Number of Equivalent Meters (EM) | | 8,725 |
| Buy-in Unit Charge @ 1" Meter, \$/EM | \$ | 4,292 |

⁽¹⁾ Allocated to SA1 based on RCLD asset valuation.

- Excluding non-backbone assets (e.g., distribution lines, contributed assets)
- Subtract outstanding debt principal because the bond holders "own" that portion of the asset value
- Include cash on hand as that's equity that has been contributed to the system.

Proposed Capacity Fee

| | EM | EM | Proposed | Current |

| | Capacity (gpm) | Capacity Ratio | \$/EM | \$/EDU (\$/EM) |
| 1" | 50 | 1.0 | \$4,292 | \$4,479 |
