Michele King,

Am uncertain how this watershed concern fits into your Stream Planning and Operations Committee agenda but would like to see it addressed in scope of Valley Water's efforts to accommodate global warming impacts to District operations.

In the past year reports about storm systems that inundated European countries noted that the Netherlands apparently suffered minimal flooding due to intensive measures to expand retention capabilities of agricultural and wetlands acreage in watersheds as well as beefing up levees. Believe these actions were initiated over decades since scientists first warned of global warming and its effect of increased intensity and longevity of storm systems.

Have not heard what measures Valley Water has instituted of a similar nature in watersheds of Coyote Creek and Pajaro River which are Santa Clara County rivers with extensive watersheds and serious channel capacity limitations.

Would ask that this be submitted to Committee in public comment period if at all possible.

Thank you,

Libby Lucas
