

Permanente Creek Floodwall Retrofit Project

As part of Valley Water's ongoing efforts to ensure existing floodwalls continue to provide flood protection to surrounding neighborhoods and businesses, our Permanente Creek Floodwall Retrofit Project is underway. The work involves retrofitting the foundations of approximately 1,300 feet of floodwalls along the eastern bank of Permanente Creek between Charleston Rd. and US Highway 101, in Mountain View. The foundations will be reinforced and widened to increase the floodwall's stability.

The retrofit work starts in late November 2022 and continues through April 2023. Trail detours will begin in mid-November.

TRAIL DETOURS

There will be two temporary trail detours in effect. The first detour, defined by the blue striped path, will last five days as crews build a temporary pedestrian ramp to separate trail users from the construction area. The same detour is expected to be implemented again after the project is completed, to accommodate the removal of the temporary ramp and restoration of the trail to its original condition.

The second trail detour, defined by the green dotted path, will start after the temporary pedestrian ramp is constructed and will be in effect through the project's completion, anticipated in April 2023.

PUBLIC SAFETY

Trail access is critical as it is used for recreation or commuting. Please use caution near the construction site and follow all safety signs as construction equipment will be moving in and out of the creek area throughout the duration of the project.

If you have questions, please contact Jose Villarreal at (408) 630-2879 or jvillarreal@valleywater.org.
