Coyote Creek Flood Management Measures Project (CCFMMP) Contractor Open House
• The CCFMMP is to construct improvements along approximately four (4) miles of Coyote Creek, between Old Oakland Road and Highway 280, in San José.

• The primary objective, when combined with Coyote Creek Flood Protection Project (CCFPP), is to provide protection from floods up to the level that occurred on February 21, 2017, equivalent to approximately a 5% flood (20-year event).
• Combined CCFMMP and CCFPP extends 9-miles from Montague Expressway to Tully Road
• The map to the left shows reaches 5 and sections of 6 and 7, as part of the CCFMMP, with construction anticipated to start in 2023 and last through August of 2024.
Reach 5

REACH 5
Install floodwalls to protect residential, businesses and industrial areas.
Reach 6

Install floodwalls to protect residential, businesses and industrial areas.
Reach 7

REACH 7
Install floodwalls and demo properties to protect residential, businesses and industrial areas.

Reach 7 Project Area

Valley Water
Project Specific Considerations

• Homeless encampment abatement
• Press-in method for installation of sheet pile
• Site constraints
• Schedule constraints
• Vibrations concerns from proximity to homes and structures
Scope of Work

- Install steel pipe piles and sheet piles using a non-impact, non-vibratory hydraulic press-in method
- Demolition
- Temporary tree and plant protection
- Selective tree/shrub removal and trimming
- Topsoil stripping and stockpiling
- Clearing, grubbing and stripping
- Subsurface Data, Drilling, sampling, and testing
- Metal fabrications
- Flood gates and doors
- Glass Floodwall
- Earthwork
- Concrete formwork
- Joints and waterstops in concrete
- Concrete Reinforcement
- Cast-in-place concrete
- Controlled low strength material
- Dewatering, Diversion, and Control of Water
- Erosion control
- Riprap
- Temporary Shoring
- Landscape establishment
- Aggregate surfacing
- Irrigation
- Planting
- Seeding
