Like CNPS, the Santa Clara Valley Water District strives to protect, conserve, maintain, and reestablish watershed specific native plants. If natural revegetation from surrounding areas or the native soil seed bank is inadequate, actively assist revegetation by planting seeds or plants grown from seeds, cuttings or divisions collected locally. If planting is necessary, please use plant materials

collected from the project site first, adjacent or nearby sites second, and the same watershed at the same approximate elevation and slope aspect as the project site.

Please talk to your local native plant and nursery experts! The local CNPS Santa Clara Chapter's website is <http://www.cnps-scv.org/>.
