Stream Maintenance Program Renewal

Presented by: Ken Schwarz and Allison Chan, Horizon Water and Environment

Outline

- 1. Introductions
- 2. Meeting Purpose
- 3. Program Background and Overview
- 4. 2022 Program Updates (SMP-3)
- 5. SMP-3 Timeline
- 6. Stakeholder Comments

1. Introductions

4

Valley Water:

Scott Akin

Billy Williams

Jeff Lewis

John Chapman

Jennifer Codianne

Devin Mody

Cody Houston

Horizon Water and Environment:

Ken Schwarz

Allison Chan

2. Meeting Purpose

- Update stakeholders about SMP-3 planning process.
- Receive input from stakeholders on SMP-3.

3. Program Background and Overview

6

Stream Maintenance Program Evolution:

2001: Stream Maintenance Program (SMP-1);

EIR certified 2002

2011: 2014-2023 Stream Maintenance Program

(SMP-2); Subsequent EIR certified 2012

Present: 2024-2033 Stream Maintenance Program

(SMP-3)

Program Goals

SMP activities are intended to meet two goals:

- 1. Maintain the flow conveyance capacity of Valley Water (VW) channels and facilities.
- 2. Maintain the structural and functional integrity of VW facilities.

Program Objectives

- 1. Remove necessary sediment to provide flow conveyance and safety while maintaining habitat functions of creeks;
- 2. Manage vegetation for flow conveyance and safety while maintaining the habitat functions of creeks, channels and other VW facilities, and to allow levee inspections and maintenance access;

Program Objectives (cont'd)

- 3. Stabilize stream and channel beds and banks to protect existing infrastructure, maintain public safety, reduce sediment loading, protect water quality and protect habitat values; and
- 4. Avoid, minimize or mitigate impacts on the environment by identifying when maintenance work is necessary and incorporating stream stewardship measures to reduce potential impacts and enhance conditions where possible.

Valley Water Board of Directors' Ends Policies

10

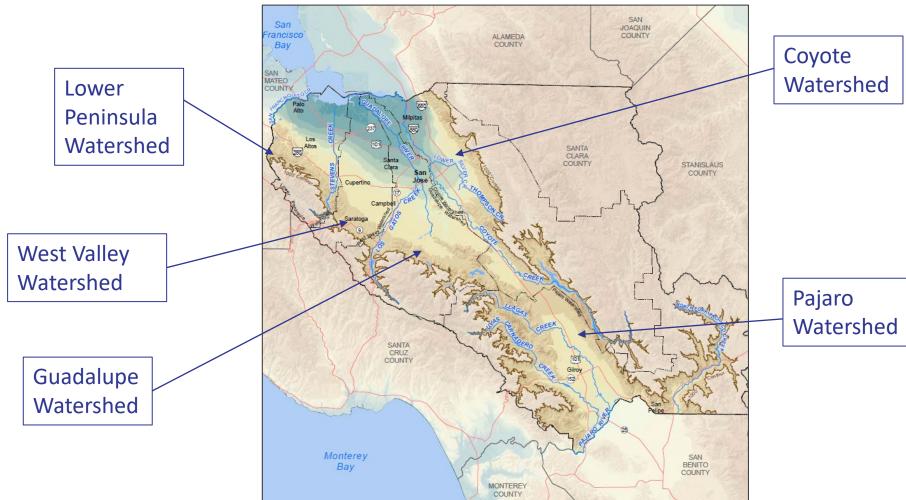

Maintenance activities are conducted to meet the following Ends Policies:

- E-3: Natural flood protection is provided to reduce and improve health and safety for residents, businesses, and visitors now and into the future; and
- **E-4**: Water resources stewardship protects and enhances ecosystem health.

Program Area

11

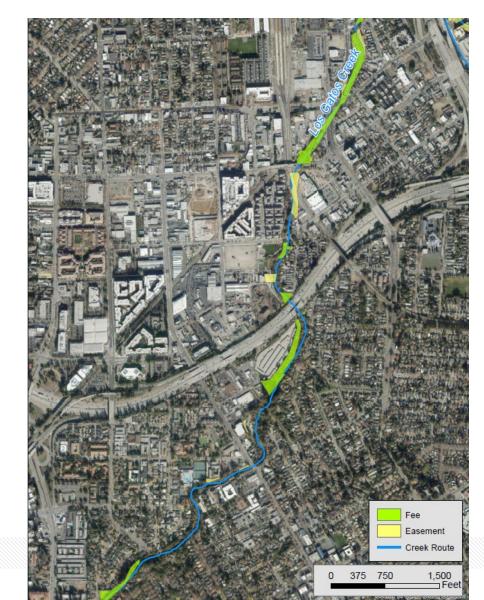

Maintenance Limited to VW's Fee and Easement

Areas

 Ex. map of VW's fee and easement areas on lower Los Gatos Creek in central San Jose.

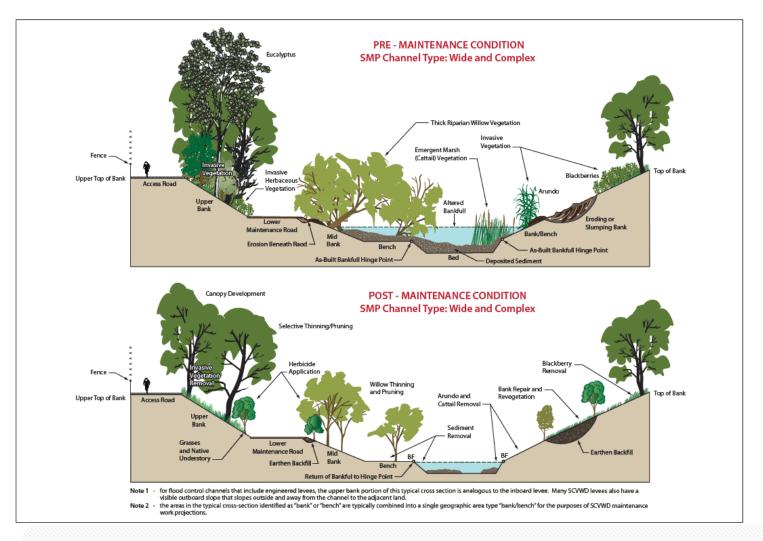

SMP Activities

Туре	Description
Sediment Removal	Remove sediment from channels and associated facilities (debris basins, culverts, bridges, tide gates, flap gates, stream gauge stations) to restore floodwater conveyance capacity, ensure proper channel/facility function.
Vegetation Management	Prune and thin vegetation along creeks. Also includes grass mowing/discing, snag and hazard removals, herbicide application, invasive plant removal, and hazardous tree management.
Bank Stabilization	Repair, stabilization and erosion control activities on slumped and eroded stream banks and levees. Includes erosion protection work and multiple repair methods.
Management of Animal Conflicts	Biological control, site alterations (levee compaction, filling burrows, physical barriers), bird nest deterrence, live trapping, and chemical control.
Minor Maintenance Activities	Maintenance of revegetation sites, fence and structure repairs, minor grading to improve drainage or repair existing maintenance roads, graffiti removal, trash removal, removal of obstructions or other blockages at structures, large woody debris management, routine work at maintenance yards, and trash boom installation/maintenance.*

^{*}Bold text indicates new activities

Overview of SMP Activities

Sediment Removal Activities

After

Sediment removal activities along San Tomas Aquino Creek at Westmont Debris Basin.

Sediment Removal Activities

Sediment removal activities along Ross Creek and access ramp.

Sediment Removal Activities

Sediment removal activities along Berryessa Creek downstream of Piedmont Rd.

Vegetation Management Activities

Hand removal

In-stream vegetation management

– mechanical removal

Pruning with pole saw

Mechanical mowing

Vegetation Management Activities

Herbicide application and cut stump treatment

Goat grazing

Bank Stabilization Activities

20

Before

After

Bank repair activities along Golf Creek.

Bank Stabilization Activities

21

After

Bank repair activities along Regnart Creek.

Bank repair activities on Ross Creek at Briar Glen Dr.

Management of Animal Conflicts

Burrowing animal levee repair work completed along Guadalupe River.

Minor Maintenance and Large Woody Debris

Example fence in need of repair.

Trash removal on Coyote Creek.

Fallen tree requiring removal from Guadalupe River.

Program BMPs

24

SMP BMPs developed to avoid/minimize stream maintenance activity impacts.

	,		7 1
	BMP Number	BMP Title	BMP Description
	GEN-17	Employee/Contractor Training	All appropriate Valley Water staff and contractors will receive annual training on Stream Maintenance Program BMPs. The training will also include an overview of special-status species identification and habitat requirements. Valley Water staff and contractors will receive fact sheets to assist with in-the-field identification of special-status species and their habitats.
	GEN-19	Work Site Housekeeping	 Valley Water employees and contractors will maintain the work site in neat and orderly conditions on a daily basis, and will leave the site in a neat, clean, and orderly condition when work is complete. Slash, sawdust, cuttings, etc. will be removed to clear the site of vegetation debris. As needed, paved access roads and trails will be swept and cleared of any residual vegetation or dirt resulting from the maintenance activity. For activities that last more than one day, materials or equipment left on the site overnight will be stored as inconspicuously as possible, and will be neatly arranged. Any materials and equipment left on the site overnight will be stored to avoid erosion, leaks, or other potential impacts to water quality (see BMPs GEN-24). Valley Water's maintenance crews are responsible for properly removing and disposing of all debris incurred as a result of construction within 72 hours of project completion
÷į.	GEN-20	Erosion and Sediment Control Measures	 Soils exposed due to maintenance activities will be seeded and stabilized using hydroseeding, straw placement, mulching, and/or erosion control fabric. These measures will be implemented such that the site is stabilized and water quality protected prior to significant rainfall. The channel bed and areas below the Ordinary High Water Mark (OHWM) are exempt from this BMP. The preference for erosion control fabrics will be to consist of natural fibers; however, steeper slopes and areas that are highly erodible may require more structured erosion control methods. No non-porous fabric will be used as part of a permanent erosion control approach. Plastic sheeting may be used to temporarily protect a slope from runoff, but only if there are no

indications that special-status species would be impacted by the application.

Program BMPs (cont'd)

SMP BMPs developed to avoid/minimize impacts on cultural resources.

BMP Number	BMP Title	BMP Description
GEN-40	Discovery of Cultural Remains or Historic or Paleontological Artifacts	 Work in areas where remains or artifacts are found will be restricted or stopped until proper protocols are met. Work at the location of the find will halt immediately within 100 feet of the find. A "no work" zone shall be established utilizing appropriate flagging to delineate the boundary of this zone, which shall measure at least 100 feet in all directions from the find. Valley Water shall retain the services of a Consulting Archaeologist or Paleontologist, who shall visit the discovery site as soon as practicable, and perform minor hand-excavation to describe the archaeological or paleontological resources present and assess the amount of disturbance. The Consulting Archaeologist shall provide to Valley Water and the Corps, at a minimum, written and digital-photographic documentation of all observed materials, utilizing the guidelines for evaluating archaeological resources for the California Register of Historical Resources (CRHR) and National Register of Historic Places (NRHP). Based on the assessment, the District and Corps shall identify the CEQA and Section 106 cultural-resources compliance procedure to be implemented
GEN-41	Review of Projects with Native Soil	A cultural resources specialist will conduct a review and evaluation of those sites that would involve disturbance / excavation of native soil previously undisturbed by contemporary human activities to determine their potential for affecting significant cultural resources. The evaluation of the potential to disturb cultural resources will be based on an initial review of archival information provided by the California Historical Resources Information System/Northwest Information Center (CHRIS/NWIC) in regard to the project area based on a 0.25 mile search radius. It is recommended that this initial archival review be completed by a professional archaeologist who will be able to view confidential site location data and literature to arrive at a preliminary sensitivity determination. If necessary, a further archival record search and literature review (including a review of the Sacred Lands Inventory of the Native American Heritage Commission); and a field inventory of the project area will be conducted to determine the presence/absence of surface cultural materials associated with either prehistoric or historic occupation

SMP Website and VW News Blog

26

- Specific information on individual maintenance projects available at: https://www.valleywater.org/project-updates/stream-maintenance-program
- Additional information available on Santa Clara Valley
 Water News blog:
 https://valleywaternews.org/2021/09/30/photo-slideshow-valley-water-performs-annual-work-in-creeks-for-flood-protection/

Annual SMP Work Sequence

27

Work Plan Development

- Initial survey and identification of work needs
- Site assessment and project designs for proposed projects
- Annual Work Plan submitted to agencies, with additional Notices of Proposed Work (as needed)

February - April

Implementation

- Pre-maintenance planning, logistics, site-specific requirements, constraints, and BMPs
- Work implemented during the summer season, or as described in the work order

May - October

Annual Reporting

- Annual Summary Report (ASR) summarizing work conducted and mitigation monitoring
- End-of-year meeting with Valley Water staff to review prior year's work (as needed)

November - January

4. SMP-3 Updates

- 28
- Expand activity descriptions to include work at maintenance yards, hazardous tree management, and trash boom installation/maintenance.
- Modify work limits for: tree removal and pruning/limbing activities, revise the list of herbicides and surfactants, and bank repairs.
- **Update Program BMPs** to reflect lessons learned and updated regulatory requirements.
- Expand Program mitigation options to include: trash and encampment cleanup activities & payment of impact fees through Santa Clara Valley Habitat Plan.
- Expand permanent mitigation areas (PMAs) originally established in SMP-1 to offset impacts to jurisdictional waters/wetlands not under existing PMAs.

5. SMP-3 Timeline

29

Administrative Draft Manual: Spring 2022

• CEQA Scoping: Spring 2022

Public Draft SMP-3 Manual and Draft EIR: Spring 2023

• Final SMP-3 Manual and Final EIR: Fall 2023

• Permitting: Spring 2022-Fall 2023

6. Stakeholder Feedback / Comments
