

Project Name			me Watershed			New or Expansion (N/E)?
Project Acreage		-		Proposed Impervious		Disturbed Acreage
Address: Phone:				Address: Phone:		
Арр	licant s	hall so	n Review Submittal Package Require elect all applicable items below and p ts are for the <u>Wake County Unified De</u> ion Control and Stormwater Joint Ap	provide with the evelopment Org	inance (UDO), adop	ted 04/17/06.
	2.	Revi	ew Fees (Required to initiate process	ing)		
	3.	Othe	er documents:			
		a.	WC ONLY PRELIMINARY ZONING AN description, subdivision or COSD ap	proval, or Board	l of Adjustment app	roval, etc.)
		b.	WC ONLY FLOOD STUDY: Copy of ap Environmental Engineer, (if applicable)	•	ion from Wake Cour	nty Flood & Stormwater
		d.	401/404 Documentation (Buffer det	termination lett	ers, PCN application	, comments, and approval)
		e.	NCDOT Approval (Temporary Const	ruction Entranc	es, Encroachment Ag	greements, etc.)
		f.	Encroachment agreement(s) comple	eted, signed and	l notarized for all of	f-site construction
	4.	Cover letter stating the purpose of the submission, describing site drainage, stormwater management objectives, and how the proposed stormwater management plan will meet the objectives and be implemented. RESUBMITTALS: A letter detailing any changes, comments, proposed solutions to review comments, etc.				
	5.	Copy	of the USGS Quad Map with delinea	ated project limi	ts in color	
	6.	Copy	y of the Wake County Soil Survey map	p from the 1970	manuscript with de	lineated project limits in color
	7.	Drai	(1) electronic copy of the Hybrid Stor nage Area Sheets, Site Summary Shee mwater Manual for guidance	·		
	8.	Drai	nage Area Maps with stormwater dis	charge points a	nd Tc flow paths (exi	sting/post construction/post BMP)
		a.	For Water Supply Watersheds: Prov	_		acres to the drainage features for

9.	1 set of Stormwater Calculations:		
	a.	a. Support data for all stormwater practice designs, such as inflow/outflow rates, stage/storage data, hydrographs, outlet designs, infiltration rates, water elevations, design output, summary, etc.	
	b.	Other hydraulic and hydrologic computations critical to the plan/designs	
	c.	Signature, Date And Professional Seal: for all Stormwater design management proposals, i.e. calculations, BMP designs, operations/maintenance/budget/asbuilt/inspections/manuals.	
10.	Two	(2) copies of a complete set of construction drawings for 1st submission, five (5) copies for approval	
11.		t Stormwater Agreement, Draft Maintenance Agreement, Draft Deed Restrictions / Protective Covenants bosal, Draft As Built Plan or performance guarantee paperwork	
12.	Prop	posed Site Plan:	
	a.	Location/Vicinity Map	
	b.	North arrow, graphic scale, drafting version date, legend and professional seal	
	c.	Existing and proposed contours: plan and profiles for roadways	
	d.	Boundaries of tract: including project limits	
	e.	Table with impervious calculations - existing and proposed impervious surfaces: roads, well lots, recreation sites, single family residences, etc. (consistent with SW Hybrid Tool inputs)	
	f.	Proposed improvements: roads, buildings, parking areas, grassed landscaped, and natural areas.	
	g.	Lot lines, lot numbers, road names, and impervious limit on each lot rounded to nearest whole number	
	h.	Utilities: community water and sewer, plan/profiles, easements and sediment controls, and offsite septic.	
	i.	Stormwater Network: inlets, culverts, swales, ditches, channels and drainage easements.	
	j.	Show all Riparian Buffers [Article 9-21]; (Neuse: [15A NCAC 02B.0233 & 0242]	
	k.	Delineation of current FEMA boundaries (floodway, flood fringe & future/0.2%)	
	I.	Delineation of flood prone soil areas	
	m.	Proposed easement access lanes and sediment disposal areas for future maintenance of stormwater management facilities. Provide and label minimum 20 ft. Access easement and 10 ft. Maintenance easement from toe of stormwater pond embankment. Proposed drainage easements and widths (in Feet); Provide and label 20 ft. Drainage easement between every 4 residential lots or 4 acres of drainage area.	
	n.	RESIDENTIAL ONLY Asterisk lots requiring flood permits	
	0.	Finished floor elevations as required	
	p.	A note should be added to the recorded plat distinguishing areas of disconnected impervious	
	q.	Location and type of all proposed stormwater management structures (grass swale, wet/dry detention basin, filtering/infiltration basin, bioretention, etc.). Must be located in a common area of development.	

		r.	Location of stormwater management structures should meet setback requirements from all wastewater system components in accordance with Regulations Governing Wastewater Treatment and Dispersal Systems in Wake County.	
		s.	RESIDENTIAL ONLY Perpetuity statement Impervious surface coverage shall not exceed impervious shown on the lot. Impervious surface limits will be strictly enforced into perpetuity.	
		t.	Q-100 backwater elevations must be shown above all culverts/BMPs draining 4 or more acres.	
By m Unle	narking	item erwise	Requirements s with an "X", applicant acknowledges potential standards to be applied to the proposed development. e noted, all references shown in brackets are for the Wake County Unified Development Ordinance (UDO), 06.	
Wak	ce Cou	nty U	DO Article 8 – Subdivision Design and Improvements	
	8.	Article 8-37 Streams or Drainageways - Easements for streams or drainageways must be provided and must follow the existing course of such streams or drainageways. Easements for drainage of surface waters from 4 lots or less may cross lots only if the Planning Board or Planning Director determines that such location will not pose a hazard to persons or property.		
]		Article 8-43 Standards - All subdivisions within the zoning districts R-40W, R-80W and overlay districts WSO-2NC, WSO-3CA, WSO-3NC and WSO-4P must be designed and constructed so that all development directly associated with the subdivision (e.g., roads, utilities, grading, drainage facilities) and all subsequent development (e.g., buildings, driveways, yards, on-site utilities, grading, drainage facilities) on the subdivision's lots and other parcels:		
	9.		 minimizes impervious or partially pervious surface coverage; diffuses the flow of stormwater runoff, encourages sheet flow and avoids concentrated discharge of stormwater into surface waters; incorporates Best Management Practices (BMPs) to minimize adverse water quality impacts; transports stormwater runoff from the development by vegetated conveyances; and 	
			avoids disturbance of vegetation within water supply watershed buffers	
Wak	ce Cou	nty U	DO Article 9 - Stormwater Management Requirements	
See	Wake (Count	cy's Stormwater Manual: Submittal and Design Guidance	
	10.	Stormwater Review Required - All residential subdivision development must submit a plan to comply with Article 9. Minor subdivisions have the option of limiting impervious to 15%. Office, institutional, commercial or industrial development that disturbs greater than ½ acre is required to comply with the stormwater management regulations of Article 9.		
	11.	Stormwater Permit – is required for all development and redevelopment unless exempt pursuant to the UDO. A permit may only be issued subsequent to a properly submitted, reviewed and approved stormwater management plan and permit application. [Article 9] Note: A permit may not be required if there are no post-construction requirements (i.e. BMPs).		
	12.	Volu num	Ime Management – is required for RESIDENTIAL regular subdivisions when the post development curve liber exceeds the pre development curve number using the Wake County Hybrid Stormwater Tool. Minor divisions have the option of limiting impervious to 15%.	
	13.	BMPs - For projects requiring stormwater treatment for quality and/or quantity control, the applicant must comply with the NC BMP Manual, as well as <i>Article 9 Stormwater Management, Part 3 Completion and Maintenance of Improvements prior</i> to approval of the record plat.		

	Downstream Impact Analysis – Required analysis using the "10% rule" drainage area evaluation of the 10-y					
	14.					
Nicoto	A	channel degradation downstream of the project site in accordance with Article 9-22.				
		_	ement Strategies – Neuse Rules [15A NCAC 02B.0235]; Neuse Rules apply County-wide [Article 9-21]			
see	wake	County	's Stormwater Manual: Submittal and Design Guidance			
Sele	ct all th					
	15.		<u>Peak Flow</u> – new development shall not result in a net increase in peak flow leaving the site from the pre			
]			development conditions for the 1 yr-24hr storm.			
	16		gen Load - contributed by the proposed new development activity shall not exceed the unit area mass			
	16.		loading rate for nitrogen of 3.6 of pounds per acre per year: nitrogen loading shall be calculated using the Wake County Hybrid Stormwater Tool.			
		Cour	Replacement or Expansion w/No Net Increase in BUA — proposed development that would replace or			
			expand structures or improvements that existed as of July 2001, <u>and that would not result in a net</u>			
	Ш	a.	increase in built-upon area shall not be required to meet nitrogen loading targets except to the extent			
			that the developer shall provide stormwater control at least equal to the previous development.			
			Replacement or Expansion with Net Increase in BUA proposed development that would replace or			
		b.	expand structures or improvements and that would result in a net increase in built-upon area shall			
	ш	٠.	meet the target of 3.6 lbs/ac/yr for the entire site OR achieve a 30% reduction in nitrogen loading and			
			no increase in phosphorus loading.			
			<u>LID option</u> - Developments that show volume matching using <u>Storm-EZ</u> shall be considered as meeting			
			nutrient export requirements without making offset payments provided the following:			
		c.	When analyzing a development site, the pre-development land cover shall be entered into Storm 57 as "Woods" for the entire project area.			
	Ш		Storm-EZ as "Woods" for the entire project area. • The Wake Couty Hybrid Tool must be run to estimate the pre-development, and post-			
			development, pre-BMP nutrient export rates for the site.			
			See NCDENR Memo on Coordination between LID & NSW Programs			
Wak	ce Cou	ntv UD	O Article 10 - Erosion and Sedimentation Control Requirements			
			on Control: This project will require an Approved Erosion and Sediment Control Plan and Land Disturbance it if it involves greater than one acre of disturbance [10.13.1(A)]. Note: If the land disturbance is part of a			
	17.		Permit if it involves greater than one acre of disturbance [10-13-1(A)]. Note : If the land disturbance is part of a common plan of development that is greater than one acre of disturbance, an Approved Erosion and Sediment			
Ш			Control Plan and Land Disturbance Permit are required for each individual tract or parcel disturbance within the			
			common plan of development, regardless of land disturbance acreage in each tract/parcel.			
Wak	Wake County UDO Article 14 - Flood Hazard Area Requirements					
		Flood Study Required [Article 14] A study of the potential changes in the base flood elevation caused by the				
П	18.		obstruction (fill), encroachment, alteration or relocation (including driveway or road crossings) of the following			
]	10.	areas (15a-f):				
			a FEMA mapped floodway			
		a.	(Note: No new structures may be constructed or placed within a floodway or non-encroachment area			
		a.	except as otherwise provided by subsection 14-19-2; AND No fill may be placed in a floodway or non-			
			encroachment area except as otherwise provided by subsection 14-19-2; [Article 14-19-3(A-B)])			
		b.	a non-encroachment area [Article 14-19-3(A-B)], see note above			
		c.	a FEMA mapped area of special flood hazard that has not previously been studied in detail			

		d.	flood hazard soils areas with a total drainage area of more than 5 ac but no more than 25 ac [Article 14-15-3] – or -		
		e.	flood hazard soils areas with a total drainage area of more than 25 ac, but less than 100 ac [Article 14-15-4] – or -		
		f.	flood hazard soils area with a total drainage area of 100 ac or more [Article 14-15-5]		
	19.	Impo	oundments and Dams [14-23]		
		a.	Any construction, repair, alteration, or removal of a jurisdictional dam shall obtain State Agency Approval in accordance with Article 21, Chapter 143 of the North Carolina General Statutes. [Article 14-23-1]		
			If an impoundment is proposed to be constructed or retained within any proposed subdivision, the following standards shall apply. These County standards are separate from and do not supersede any State Agency requirements.		
		b.	 The impoundment and its dam shall be constructed or structurally upgraded to accommodate the runoff from a 24-hour, 100-year frequency storm. Runoff computations must use SCS methods or other acceptable engineering standards. [Article 14-23-2] 		
Wak	ce Cou	nty UE	OO Article 11 - Environmental Standard Requirements		
	20.	Wate	Vater Supply Watershed Buffers (WSWB) Article 11, Part 2 Select all that apply.		
		a.	 Water Supply Impoundments with a drainage area of 25 acres or more [Article 11-21-2]: WSWB required with a minimum width of 100' around all water supply impoundments Buildings must be setback at least 20 feet from the outer boundary of the required buffer area. 		
		b.	 Water Supply Impoundments with a drainage area of 5 to 25 Acres [Article 11-21-3]: WSWB required with a minimum width of 30' provided around all water impoundments Buildings must be setback at least 20 feet from the outer boundary of the required buffer area. 		
		c.	Non-Water Supply Impoundments with a drainage area of 25 Acres or more [Article 11-21-4]: • WSWB required with minimum width of 50' around all non-water supply impoundments. • Buildings must be setback at least 20 feet from the outer boundary of the required buffer area.		
			 Perennial Streams [Article 11-21-5]: WSWB required with a minimum width of 100' along each side of a stream shown as a perennial stream on the most recent edition of U.S.G.S. 1:24,000 (7.5 minute) scale topographic maps. The area of the required buffer that begins at the stream bank and extends landward 50 feet is 		
		d.	 subject to the Zone 1 standards of Sec. Section 11-22-1(A). The area of the required buffer that begins at the outer edge of Zone 1 and extends landward 50 feet is subject to the Zone 2 standards of Sec. Section 11-22-1(B). No minimum building setback from the required buffer. 		

			Watercourses and Channels, 5 to 25 Acres [Article 11-21-7]		
	П	f.	WSWB required with a minimum width of 30' along each side of a watercourse, channel, ditch, or		
	ш	T.	similar physiographic feature with a drainage area of at least 5 acres, but less than 25 acres		
			• Buildings must be setback at least 20 feet from the outer boundary of the required buffer area.		
		Activities Allowed within Buffers [Article 11-22-2]: Driveway crossings that access single-family			
			dwellings, provided:		
			 no alternative to their location in the buffer (including opportunity for shared driveways) exists; 		
			• buffer disturbance is no more than 60' wide;		
		g.	• buffer disturbance is no more than 6,000 SF;		
		_	• the driveway crosses the buffer at an angle close to 90 degrees and not less than 60 degrees;		
			• side slopes do not exceed a 2:1 (horizontal to vertical) ratio (bridging and/or retaining walls may be		
			used to meet this and the disturbance width standard); and		
			all culverts are designed and constructed for the 25-year storm event		
			Activities Allowed within Buffers [Article 11-22-2]: Road crossings (public or private roads), provided:		
			 no alternative location in the buffer exists; 		
			 buffer disturbance does not extend beyond the required right-of-way or easement width, or in no 		
			case is more than 90 feet wide;		
		h.	buffer disturbance is no more than 9,000 SF in area		
			 the road crosses the buffer at an angle close to 90 degrees and not less than 60 degrees; 		
			 side slopes do not exceed a 2:1 horizontal: vertical ratio (bridging and/or retaining walls may be 		
			used to meet this and the disturbance width standard); and		
			all culverts are designed and constructed for the 25-year storm		
		Special Watershed Areas - Swift Creek Water Supply Watershed Development in the Swift Creek Water Supply			
	21.	Watershed is subject to the requirements of the Swift Creek Land Management Plan in addition to other			
	21.	applicable standards.			
		аррис	An as-built plan prepared by a licensed professional land surveyor is required for all lots before a		
	Ш	a.	Certificate of Occupancy may be issued. [11-30-3]		
		b.	In addition to the standards of the underlying zoning district, additional standards apply to all land		
	Ш		within the Swift Creek Water Supply Watershed. (See [11-30-4])		
П					
ш	22.	Specia	Special Watershed Areas - Little River Water Supply Watershed		
		,	An as-built plan prepared by a licensed professional land surveyor is required for all lots before a		
	ш	a.	Certificate of Occupancy may be issued. [11-31-1]		
			The following maximum impervious surface ratios apply to all nonresidential development in the Little		
		□ b.	River Water Supply Watershed:		
			R-80W = 6% of lot/site		
			R-40W = 12% of lot/site		
	23.	Specia	l Watershed Areas - Smith Creek Water Supply Watershed		
		_	All residential and commercial properties require a preliminary site plan prepared by a licensed		
		a.	professional land surveyor, landscape architect, architect, or engineer.[11-32-1]		
			All residential and commercial properties require a preliminary site plan prepared by a licensed		
	Ш	b.	professional land surveyor, landscape architect, architect, or engineer.[11-20-1]		
		l l			

	c.	The following maximum impervious surface ratios apply to all nonresidential development in the Smith Creek Water Supply Watershed: R-80W = 6% of lot/site R-40W = 12% of lot/site			
		Perennial Streams [Article 11-21-5]:			
	d.	 WSWB required with a minimum width of 100' along each side of a stream shown as a perennial stream on the most recent edition of U.S.G.S. 1:24,000 (7.5 minute) scale topographic maps. The area of the required buffer that begins at the stream bank and extends landward 50 feet is subject to the Zone 1 standards of Sec. Section 11-22-1(A). The area of the required buffer that begins at the outer edge of Zone 1 and extends landward 50 feet is subject to the Zone 2 standards of Sec. Section 11-22-1(B). No minimum building setback from the required buffer. 			
		Non-Perennial Watercourses [Article 11-21-6]:			
	e.	 WSWB required with a minimum width of 50' along each side of non-perennial watercourses, channels, ditches or similar physiographic features with a drainage area of 25 acres or more Buildings must be setback at least 20 feet from the outer boundary of the required buffer area. 			
		Watercourses and Channels, 5 to 25 Acres [Article 11-21-7]			
	f.	 WSWB required with a minimum width of 30' along each side of a watercourse, channel, ditch, or similar physiographic feature with a drainage area of at least 5 acres, but less than 25 acres Buildings must be setback at least 20 feet from the outer boundary of the required buffer area. 			
		Activities Allowed within Buffers [Article 11-22-2]: Driveway crossings that access single-family			
	g.	 dwellings, provided: no alternative to their location in the buffer (including opportunity for shared driveways) exists; buffer disturbance is no more than 60' wide; buffer disturbance is no more than 6,000 SF; the driveway crosses the buffer at an angle close to 90 degrees and not less than 60 degrees; side slopes do not exceed a 2:1 (horizontal to vertical) ratio (bridging and/or retaining walls may be used to meet this and the disturbance width standard); and all culverts are designed and constructed for the 25-year storm event 			
		Activities Allowed within Buffers [Article 11-22-2]: Road crossings (public or private roads), provided:			
	h.	 no alternative location in the buffer exists; buffer disturbance does not extend beyond the required right-of-way or easement width, or in no case is more than 90 feet wide; buffer disturbance is no more than 9,000 SF in area the road crosses the buffer at an angle close to 90 degrees and not less than 60 degrees; side slopes do not exceed a 2:1 horizontal: vertical ratio (bridging and/or retaining walls may be used to meet this and the disturbance width standard); and all culverts are designed and constructed for the 25-year storm
