

HALEYS BRANCH TRAILS

EXISTING SLOPE

0%-2% | Very Flat

Best for beginner loops, skills areas, and warm up segments. May require added features to create flow. Can stay wet after heavy rain.

2%-6% | Gentle Slopes

Excellent for flow trails with smooth climbing and descending. Drains well and supports long term trail sustainability.

6%-10% | Moderate Slopes

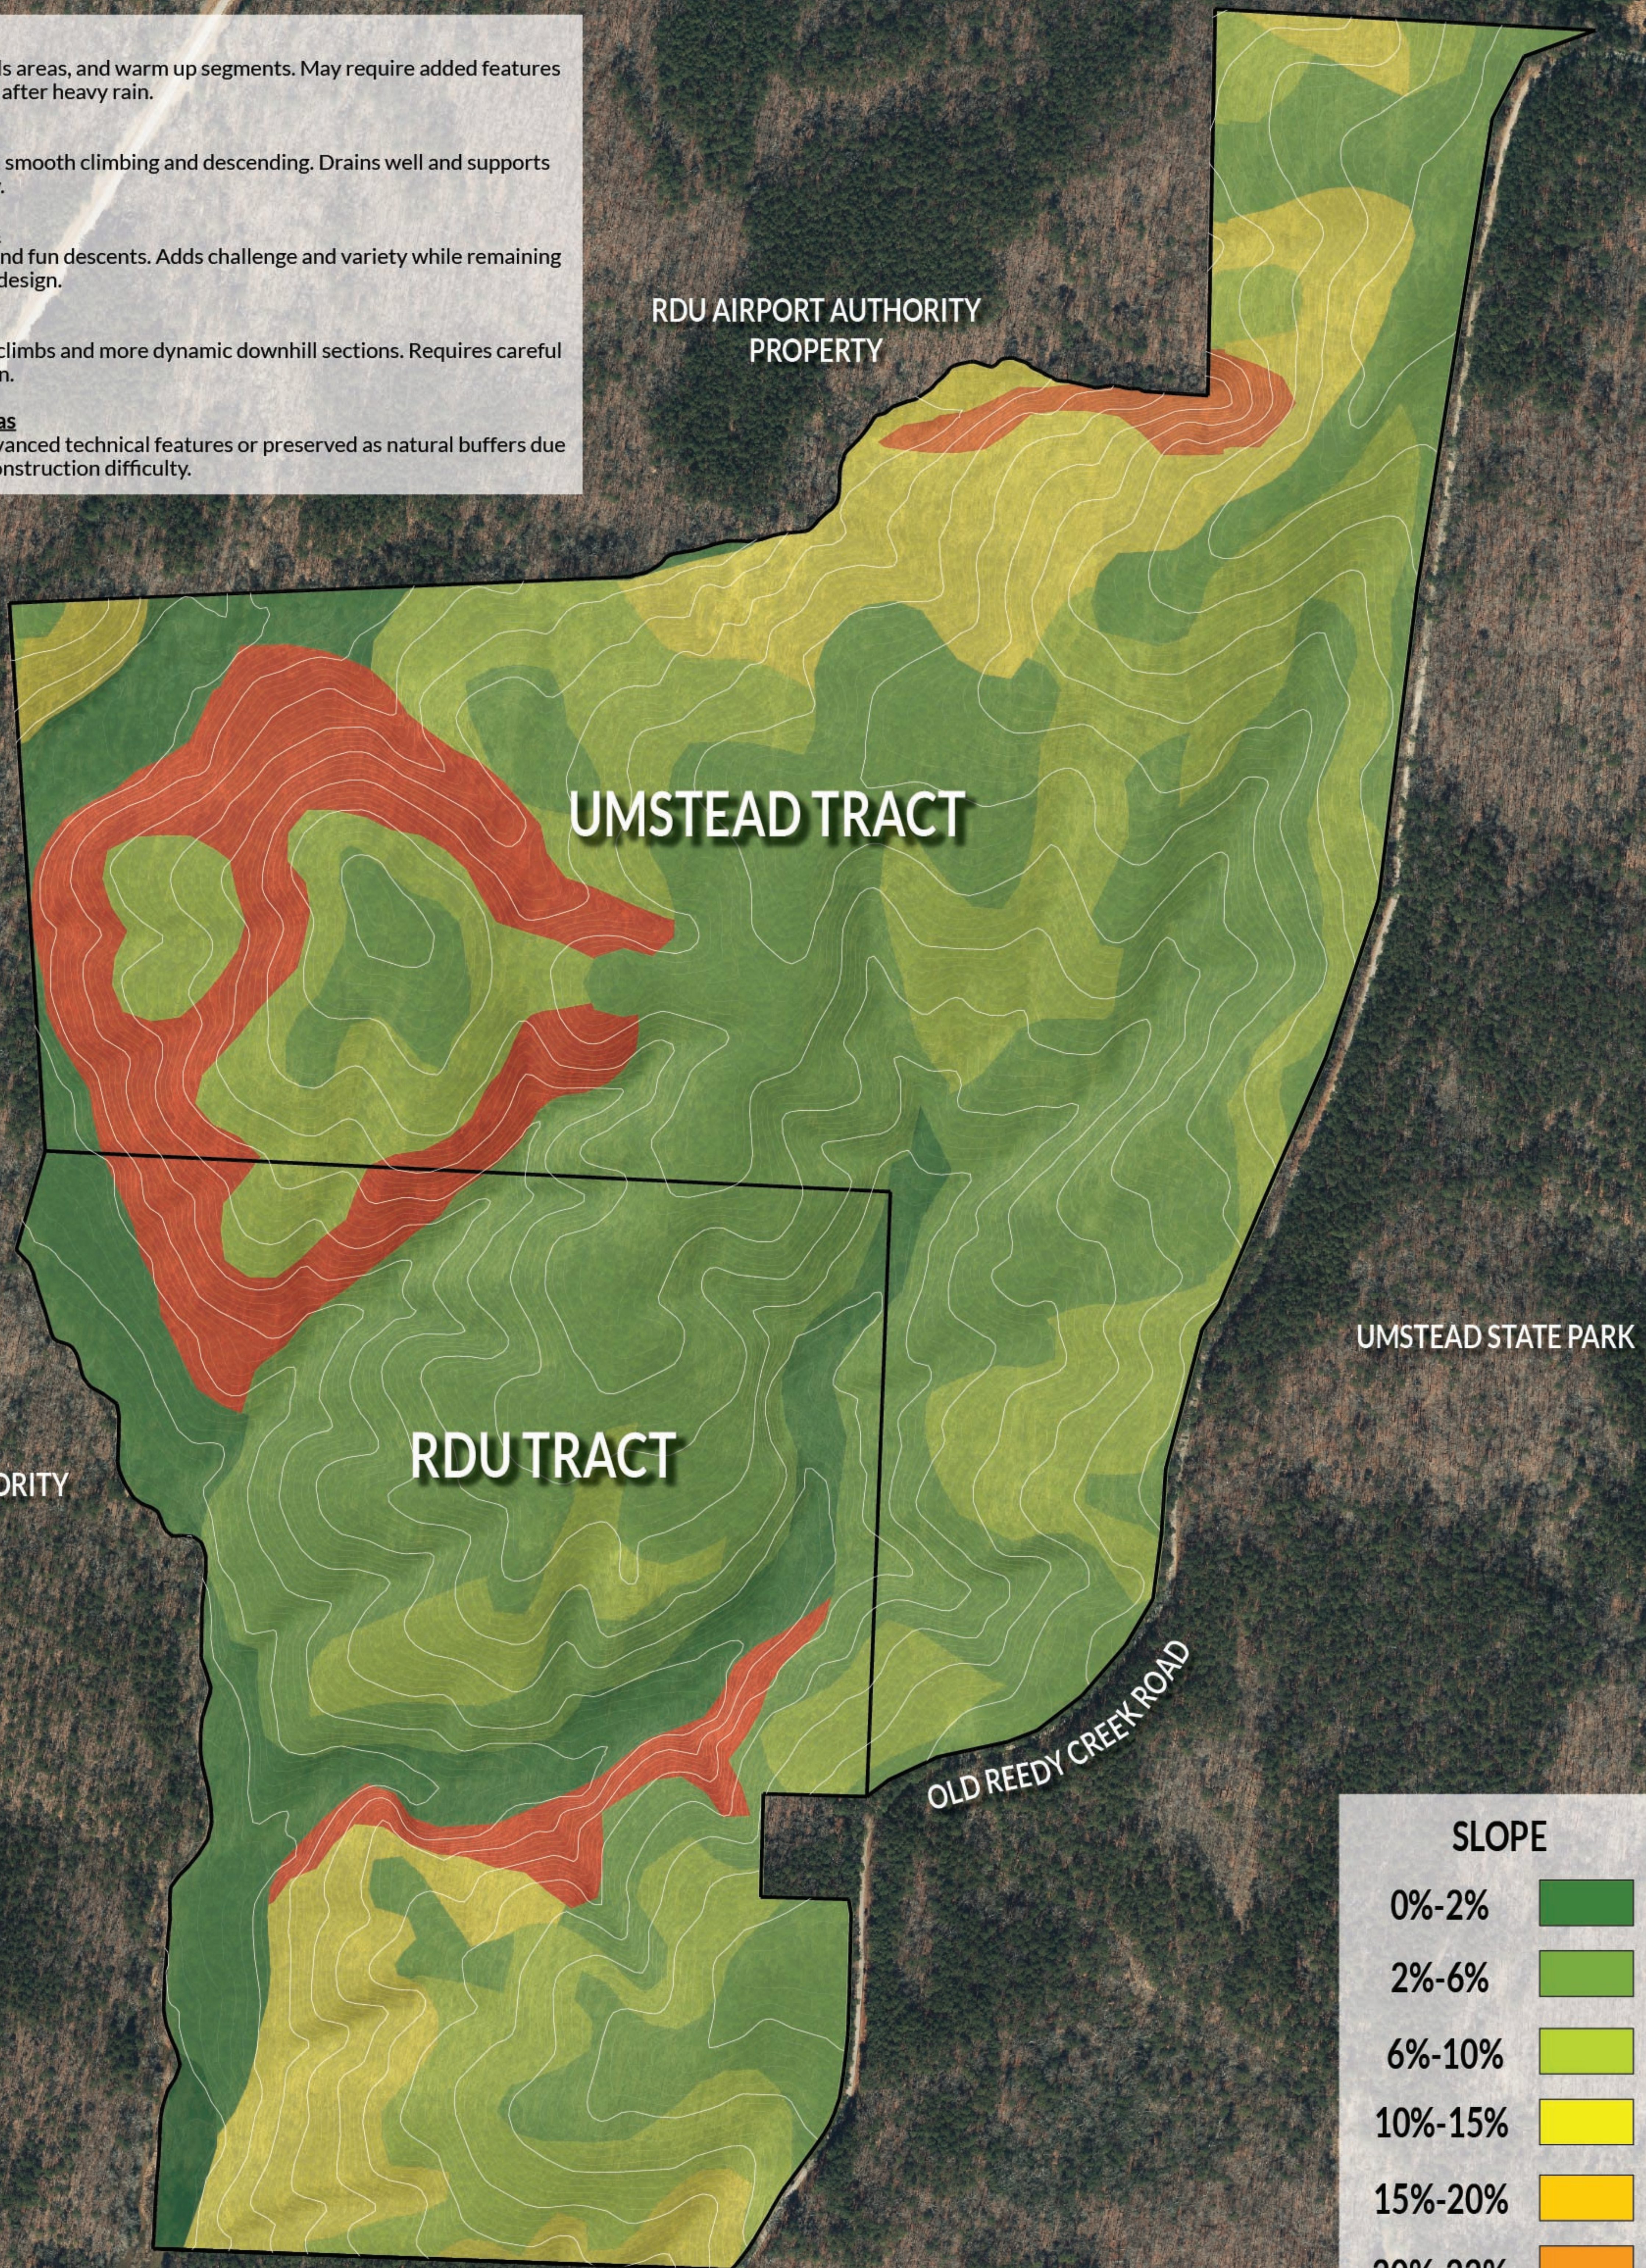

Great for sustained climbs and fun descents. Adds challenge and variety while remaining highly rideable with proper design.

10%-15% | Steeper Terrain

Suitable for short technical climbs and more dynamic downhill sections. Requires careful alignment to prevent erosion.

15%-30% | Very Steep Areas

Best used selectively for advanced technical features or preserved as natural buffers due to higher erosion risk and construction difficulty.
