

Kiosk

Trailhead Signage

The main kiosk panels offer a complete overview of the entire trail system. They provide information on trail difficulty and mileage, along with essential guidelines for trail usage and cautionary regulations.

Panels can also display local park regulations, including hours of operation, ways to volunteer, options for donating to the park, and important contact information.

Perfect for the main entrance to your trail system. They come in single panel to four panel and roof tops vary. We suggest one kiosk per trail entrance/ parking lot.

Hub

Intersection Signage

The Hub signs are additional maps essential for directional guidance, placed at main intersections. Hub signs are also effective for showcasing vegetation information and/or historical and cultural details relevant to the area.

Positioned at key intersections along your trail system, providing additional map information and/or local insights. When possible, we collaborate with local search and rescue teams to provide trail location numbers.

We recommend installing at least two hub signs for every five miles of trail.

Trail Marker

Trail Signage

Trail markers are placed at the entrance and exit of each segment and can be utilized throughout your entire network. They display the trail name and help assure users that they are heading in the right direction.

Additionally, these markers showcase your name and brand, creating a cohesive identity for the entire system.

Used throughout your entire network. Because they are made out of fiberglass, they do not break when hit and are less likely to injure a rider if there is a collision. Other options can be used, but we recommend Carsonite markers for this reason.
